803. Radio Amateurs on USENET List Jan 1994 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 12:33:36 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Jan28.3@ve6mgs.ampr.org>
Source record: 271782
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 94/33/28 05 33$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update January 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

804. Radio Amateurs on USENET List Jan 1994 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 12:33:50 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Jan28.4@ve6mgs.ampr.org>
Source record: 271783
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 94/33/28 05 33$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update January 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

805. Radio Amateurs on USENET List Jan 1994 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 12:34:04 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Jan28.5@ve6mgs.ampr.org>
Source record: 271784
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 94/33/28 05 33$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update January 28 1994
#
# This document may be distributed freely, as long as there is no financial
```

gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

806. Radio Amateurs on USENET List Jan 1994 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 12:34:20 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Jan28.6@ve6mgs.ampr.org>
Source record: 271779
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 94/34/28 05 34$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions. Australian Amateur Radio Operators may prefer to mail their updates
# to Dean Davidson <ddavidso@metz.une.edu.au>. Any person interested in handling
# regional versions of the list are invited to drop me a note, I am
# particularily interested in representatives of non-english speaking regions
# so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update January 28 1994
```

#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

>

There's a talk radio station, WLS in Chicago, that has a
radio host who is a Ham. I didn't hear it but last week
on his late night program, he mentioned that he would like
to devote a show to Ham Radio.

|_____________________________________________________________________________|

CONFIDENCE LEVEL: 65%
```

NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

60-DAY GRAPHICAL ANALYSIS OF GEOMAGNETIC ACT

------------------------------------------------------------
```

Chart Start Date: Day #334

NOTES:
This graph is determined by plotting the greater of either the planetary
A-index or the Boulder A-index. Graph lines are labelled according
to the severity of the activity which occurred on each day. The left-
hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

094 |************************************************************|
------------------------------------------------------------
Chart Start: Day #334

NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of
activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

So what's all this stuff about vanity callsigns? Is it now, or will it be possible in the future to choose your own callsign, assuming, of course, that someone else doesn't already have it? (I wouldn't mind getting W4DMD.) I've been marginally active for the past four years, so I'm not familiar on the latest changes to the rules and regulations.

BTW, in the latest issue of QST I noticed that most of the two by three amateur callsigns (technician/general) have be issued. I assume that the FCC is now issuing novice callsigns to new tech/tech+/general licensees. Is this true? In light of this, is there any serious talk about reissuing callsigns from expired licenses?

You might want to wait until the "vanity" call sign program is actually adopted. So far, they've just put out a notice of PROPOSED rulemaking. Now is the time for comments, etc. The rule must go through a review process with public comment before it can be enacted.

I thought that it has more to do with the way in which the de-noiser and
the auto-notcher work. Crudely spreaking, the auto-notcher removes the
parts that are highly serially correlated and the denoiser removes the
parts that are least serially correlated. Both of these depend on the
time serial correlation characteristics of human voice. But this can
change with fast fades. Hence the problem.

812. Interesting and unique things people do in Amateur Radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 15:57:11 UTC
From: jeffj@cbnewsm.cb.att.com
Message-ID: <CKCKBF.5C@cbnewsm.cb.att.com>
Source record: 271801

I was talking to a fellow ham, KC6WYA Barry, and he was telling me how he uses MIR's packet digipeater to work other hams around the country. I thought that was kinda unique and started thinking about other interesting things hams do in amateur radio. I've heard of hams playing Dungeon and Dragons via packet radio, chess on HF, weather on packet. Has anyone else heard or seen other interesting things being done with amateur radio?

I have been running a Butternut HF6V for 9 years or so and believe it
is one of the best all band verticals around. Don't know too much about the
others but the R5 is a vertical dipole and as such does not have as much gain
as a quarter wave gound plane or similar antenna. Note the Butternut as well
as any other gound plane style antenna require radials, ground rods, etc.

Dan Bowker writes:
> I'm looking to buy this weekend a ground independent vertical for HF...
> What's your opinion on:
> Cushcraft R5 (R7 too $)
> Butternut HF6V ...

Someone correct me if I'm wrong, but I think the Butternut
is very ground *dependent*. It needs either a very good ground
rod, radials, or both. The R5/R7, on the other hand, works best
when it's up high, away from the ground. A friend has the R7 and
swears by it; says it's the best vert. he's ever used. He runs low
power, and has still worked over 200 countries with it. I've never
heard anything bad about them. A beam is obviously better, but
if you can't hack a beam, an R5/R7 seems like a very good alternative.

Mike, N4PDY

* TUBSAT-B AND METEOR-3 LAUNCHED *
==================================
```

TUBSAT-B is the second scientific Microsatellite build by the Technical University of Berlin (TUB), Germany.

It was launched 25-Jan-94 from Plesetsk, Russia at 00:25 UTC together with the new Russian meteorological satellite METEOR-3. TUBSAT-B successfully separated from METEOR-3 at 09:42:50 UTC.

TUBSAT-B Downlink is on 143.075 MHz with FFSK Modulation. The beacon is transmitting a 2 second burst every 2 minutes. The satellite has not yet been heard by it's command station. Although it is not a ham radio satellite, any report is most welcome. Reports can be sent via packet radio to DL4OAD @ DK0MAV.DEU.EU

METEOR-3 Keplerian elements:

Reference Epoch 94 025.23119078
Inclination 82.5637 deg
RAAN 157.1120 deg
Eccentricity 0.0014635
Argument of Perigee 262.7207 deg
Mean Anomaly 97.2234 deg
Mean Motion 13.16729004 rev/day
Decay Rate 5.0e-8 rev/day/day
Revolution Number At Epoch 3

* OSCAR-13 NEWS *
==========
Magnetorquing from attitude 246/-3 to 180/0 commenced on Jan 28 [Fri] 00:02 UTC, orbit 4306/224, and will continue for 8 perigees. Estimated interim attitudes are: Orbit Alon/Alat: 4307 236/-5: 4308 227/-7: 4309 217/-10: 4310 209/-13: 4313 200/-10: 4314 192/-8: 4315 184/-5: 4316 178/-3. For command purposes during this 3-day period, the mode-S beacon will be ON from MA 145-150, i.e. mode-B OFF for 13 mins. The new schedule will start orbit 4314 at MA 145 Jan 31 [Mon] 16:03 UTC.

[Info via James, G3RUH]

* KITSAT-OSCAR-25 NEWS *
==========
KO-25 will open its BBS service on 01-Feb-94. Some discussion is going on about KO-25 services. The satellite controllers are thankful for the cooperation and patience of all amateurs worldwide who anxiously await the opening of the KO-25 BBS. KO-25 will operate in normal mode, 9600 bps FSK using the FTL0 communications protocol (same as Pacsats, UO-22, and KO-23).

As the KO-25 on-board experiments are not completed yet, there will be some service interruptions from time to time. SaTReC controllers decided to open the BBS since the experiments remaining will not cause any serious problem with KO-25 service later on.

[Info via Hyungshin Kim, SaTReC KAIST]

* FO-20 OPERATION SCHEDULE *
============================
The FO-20 operation schedule is follows. Analog transponder and digital
transponder will be ON for a week respectively as they were since last
December.

Analog mode:
26-Jan-94 08:20 UTC -to- 02-Feb-94 06:50 UTC
09-Feb-94 07:15 UTC -to- 16-Feb-94 07:40 UTC
23-Feb-94 08:05 UTC -to- 02-Mar-94 06:40 UTC
09-Mar-94 07:05 UTC -to- 16-Mar-94 07:30 UTC
23-Mar-94 07:52 UTC -to- 30-Mar-94 08:15 UTC

Digital mode:
Unless otherwise noted above.

Anyone know of a company which sells a Log periodic antenna which covers
the 6 meter Band??

Thanks,
Scott

819. Amateur Radio Service Joint Resolution?

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 17:03:49 UTC
From: btbg1194@uxa.cso.uiuc.edu
Message-ID: <2ibghl$eug@vixen.cso.uiuc.edu>
Source record: 271787
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Are your senators and congressman co-sponsors of these bills which are presently going through the house and the senate? If not, then write them a letter! (And if they are, write them a letter to thank them for sponsoring the bill which recognizes the amateur radio service as a national resource.)

Write your letters today! (See Jan & Feb 94 QST for more information... I will try to post some more info soon as well.)

You might be able to get your representative & senators names and addresses from the blue pages of your phone book.

Greg Bullough (greg@netcom.com) wrote:

: Steven has hit it on the head. As hams, we have for years said "can't
: afford a commercial rig? Home-brew or build a simple kit." Then
: QST and all the other magazines which bang this drum (which quite
: handily fills up magazine pages with circuits that few ever
: build) reap big advertising dollars from kit companies.

Greg,

For starters, I am not sure that few ever build projects from magazines. Some of the authors that have offered a kit have reported large sales -- to say nothing of those that either homebrew it without a kit, or at least use part of the circuit as they build something else. Go to any hamfest, note the rows upon rows of vendors offering components. Hams are buying them, putting them in bags and taking them home. They must be doing something with the parts.

Even if hams don't actually build very many projects, they sure seem to enjoy reading (or thinking) about building them! All of the ham and electronics magazines offer construction articles. I don't think I would characterize printing articles that our readers like as "banging a drum", but you may have meant something I just didn't understand.

Now, as for the big adverising dollars, I took a look at the February QST issue. I counted two 1/8th-page ads, two 1/12th page ad and a 1/24th-page ad, plus 4 ham ads, for companies offering kits. This is only a small percentage of our total ad space; most of the ads are for some form of ready-made product. Our editorial policy is not influenced by our advertisers; it is determined by our perceptions of what hams want to see. If the big advertisers were able to set our policy, they would want us to run an article titled "Don't Build Your Own Stuff -- Buy from QST Advertisers!" :-)

: As a hobby which has a tradition of mentoring ("elmering"), we are
: doing the Right Thing(TM) when we identify something like a Ramsey
: kit which is apt to blow a new ham's radio budget out the window
: while discouraging him or her, and leaving him without a working
: rig.

Our QST Product Review did indeed point out the problems we found with the Ramsey FX-146. We also pointed out those things we like. This ensures that QST reviews are complete and unbiased. People who read these things are able to decide which things are important and buy accordingly.

Please remember that the TV you have has to play what the video puts out. That means that you either have to have a multi system TV, the video has to "convert" the output to one of another system that you have on your TV, or it has to put out the video of the country and you obtain a TV set there.

I ASSUME that you know this, but considering how that word breaks down, want to be sure you knew.

I have seen people coming here and making these mistakes,

Shalom from Jerusalem,

Azriel 4X1PI

832. Re: CW filters and DSP-9

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 19:15:59 UTC
From: me@next45.wsi.physik.tu-muenchen.de
Message-ID: <1994Jan28.191559.18324@news.lrz-muenchen.de>
Source record: 271796

According to the discussion below and previous postings, I want to
supply some calcualtions shown in two pictures in following postings
based on a Fourier analysis of a morse signal of 10 times 'e':
00000101010101010101010100000

For that, I assumed a period of 120 ms for one dot, which needs two time
units of 60 ms: '10'
(50 time units per word, e.g.'paris', 20 wpm -> 60 ms per unit)

The first picture will show the frequency spectrum for that morse pattern.
('morse1.jpg', uuencoded, size: 72833 kB)

The second diagram will show the morse signals after passing filters
with different cut-off frequencies: 25 Hz, 50 Hz, 125 Hz, 250 Hz;
These frequencies apply to one sideband, so the filter bandwidth for
the whole signal is twice the frequency according to two sidebands,
respectively. For the filter, a flat passband and perfect
cutting off is assumed. The calculation is just the Fourier sum of the
peak frequencies obtained from the spectrum in picture 1.
Here you can see one possible reason for the ringing of narrow filters
which cut off the higher frequency components of a signal.
The lower the cut-off frequency, the wavier is the signal.
Modulated with 700 Hz, you'll get your ring ;^)
('morse2.jpg', uuencoded, size: 61701 kB)

Further you can see, how the rise times are affected by the
filter bandwidths. The cut-off frequency determines the
shortest possible rise time for the signal. So, the narrower
your filter is, the mushier are the dits.

Matthias

Yes! The message I am trying to convey is that if a new or VHF-poor ham wants a USEFUL and INEXPENSIVE radio that works and provides the best dollar value, buy a used HT or mobile radio. If you want a second radio just for fun and have $150-200 burning a hole in your pocket, get the Ramsay FX kit.

Converting used commercial gear is another option that is vastly better than the Ramsay kit.

>buzz, alternator whine, and distortion. Yech.

You are a prince among hams! This would be a great service for all such capable amateurs and local clubs to offer. It's a great way to ensure that all those FM transmitters are operating properly. Again, I commend you.

Why does a kit over $25 in price exist if it can't be properly and
legally used?

Subject: HAM Book store...
E-Mail won't make it to you at emba-news.uvm.edu!wetzel@uunet.uu.net so....

Dan,

In the back of the bookstore in the Ethan Allen Shopping Plaza is a
fairly large selection of ARRL publications. What they don't have
they will order and you pay the price marked on the book. I don't
remember the name of the store off hand (North Ave. Books or something
like that). I am a local call for you, so if you have questions call
me.

The Plaza is on North Avenue about 2.0 miles west of Burlington High Scool.

I heard on a local repeater about a callsign server (also an ".edu" machne)
that would give you information about a callsign by sending email to it
with the callsign in the subject(?) line. As I wasn't in a position to
jump into the conversation at the time and only caught part of it, does
anyone out there know about this and what the email address would be?

Thanks,

Steve

A local surplus shop, HalTek in Mtn. View, CA has several of these radios, just came in a few days ago. They look very incomplete, but if someone's interested they might be chock full of difficult to get parts. I don't work for them, just a frequent customer.

ZCZC AE05
QST de W1AW
DX Bulletin 7 ARLD007
>From ARRL Headquarters
Newington CT January 27, 1994
To all radio amateurs

SB DX ARL ARLD007
ARLD007 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE; QRZ DX; Karl, PS7KM; Dennis, WB0WAO; Tedd, KB8NW; the Ohio/Penn and Yankee Clipper Contest Club PacketCluster networks. Thanks.

PENGUIN ISLANDS LAST STAND? Ian, ZS9A, reports that Baldur, DJ6SI, is attempting to activate ZS0 around February 24. And there are rumblings that the Republic of South Africa may turn over both Walvis Bay and Penguin Islands to Namibia at the end of February.

NETHERLANDS ANT
PJ2/OH1VR through February 2. Seppo is likely to be active in the CQ WW 160 Meter CW Contest.

BANGLADESH. Eric, S21ZG, is on nearly every day between 3651 and 3653 kHz from 1145 to 1215z and 0000z.

EGYPT. Listen for SU2MT on 3793 kHz at 0500z.

CAYMAN ISLANDS. Vern, W8BLA, and Dick, K2UFT, are active on CW as ZF1CQ. They will be there until January 31 and plan to operate in the 160 Meter Contest. QSL via W8BLA.

SAINT LUCIA. Scott N9JCL, hopes to sign J6/N9JCL from January 28 to February 2. Check 3795 Khz SSB or 3510 kHz CW at 0900z; 7003 kHz CW at 1000z; and 14195 kHz SSB at 1200z.

OGASAWARA ISLANDS. Here's a DX-first. JA1LSY/JD1 will be operating 20 meter SST

FIJI. Shinji, JI3ACL, will sign 3D2CL on 40 through 10 meter CW and SSB February 10 to 16. QSL via JI3ACL.

CQ WW 160 MET
W3HNK. VR2MH will be OH2BH/VR2BH and OH1NYP.

FRENCH POLYNESIA. Walter, DJ0FX, will work CW and SSB as FO0PT through February 19. This will be an all-band effort.

ANTIGUA. John, AA2LW, is here on business, but operates 40 through 10 meter SSB as time allows. His favorite band is 17 meters.

SAINT CHRISTOPHER. Mike, W9NSZ, will sign V47NS on Nevis Island from January 28 to February 2.

ANGUILLA. KK3K, WB6LYI, KC6XC, KI4ZN, W9BVD, KF7IK, AF9A and AI9Q are planning a serious effort for March 5 through 10. They hope to run all band all mode HF, and will be on OSCAR 13 Mode B and S.

TURKS AND CAICOS ISLANDS. K2TD, N2VW and WB2YOF should be active through early February signing /VP5.

MEXICO. Rick, NE8Z, will operate from Puerto Vallarta as XE1/NE8Z February 13 to 20 on all bands. He will be active in the ARRL CW DX Contest. QSL via K8LJG.

ANTARCTICA. Brian, VP8CFM, is Base Commander at the British Antarctic Survey Base. His duty tour is for 14 months and he will be active as either VP8HAL or his own call. QSL via GM4KLO.

SAINT PET
approximately two weeks, starting about February 2. Plans are to operate all HF bands plus OSCARs 10, 13 and 21. Satellite operator tips are 145.890 MHz CW on OSCAR 10 and 145.925 MHz on OSCAR 13. QSL PY0SK via PS7KM. QSL PY0SP via PT7AA.

844. The Amateur Radio Service Joint Resolution (QST Info)

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-28 22:34:51 UTC
From: btbg1194@uxa.cso.uiuc.edu
Message-ID: <2ic3ub$mc1@vixen.cso.uiuc.edu>
Source record: 271840
Cross-posted to: uiuc.org.synton,rec.radio.amateur.misc,rec.radio.amateur.policy

(excerpted from QST, January 1994. -- kb8cne@uiuc.edu)

Do Amateur Radio (and Yourself) a Favor
Help protect your privileges for the future: Make Amateur Radio National Policy. Here's how !
By Rick Palm, KlCE
Field Services Manager

Make this your New Year' s Resolution Number One: Write a letter NOW to your representative and senators asking them to sign on to a bill that would make Amateur Radio a congressionally recognized, national resource. This measure, if passed, would recognize amateurs' efforts in emergency communications, support us as "national policy" and would call for regulations that "facilitate" Amateur Radio operation as a "public benefit." This is not a "motherhood and apple pie" motion. There is real substance here, with significant, tangible benefits for Amateur Radio. (For the complete text of the joint resolution, see July 1993 QST, page 74, or write to ARRL HQ for a copy.)
There's only one way it will happen: if you make it happen. Here's the story of Senate Joint Resolution 90/House Joint Resolution 199, and how you need to be a part of it.

Q. What's the big deal? Why is it so important?

A. To put it bluntly, the new law as proposed would be a big arrow in our quiver for use in our constant battle against interests that would seek to take our spectrum away, or otherwise limit our operating ability. This measure affects all of usQnot just a single special-interest group within our hobbyQ who need access to the radio frequency spectrum, the protection of which should be our number one priority. You don' t believe there' s a threat? Just look at the loss of 220222 MHz a few years ago. More challenges will follow. The proposed law would also be useful, literally, in our own backyards, when it comes time to put up our towers and operate our stations. Having a copy in hand when defending that new tower before a public hearing in a zoning board of appeals room won't hurt.

COSPONSORS
S J Res 90 and H J Res 199
The Amateur Radio Service Joint Resolution
November 30, 1993
(States with 100% of the delegation represented are marked with a *)

ILLINOIS
Rep. Henry Hyde (R, 6)

Rep. Jerry Costello (D, 12)
Rep. Dennis Hastert (R, 14)
Rep. Thomas Ewing (R, 15)
Rep. Lane Evans (D, 17)
Rep. Glenn Poshard (D, 19)

(remaining state co-sponsors are listed below FYI)

TOTAL 22 senators
124 representatives

Q. Great! What are the particulars?

A. Two identical versions of the bill are presently in Congress: Senate Joint Resolution 90 was introduced in the Senate on May 7, 1993 by Sen Charles Robb (D-VA); the House version is House Joint Resolution 199, presented by Reps Mike Kreidler (D-WA) and Jim Cooper (D-TN) with 13 initial cosponsors. If we don't get enough cosponsors, the bill may die this year.

Q. What does all that gobbledygook mean exactly?

A. It means that these elected representativesQthe same ones who debate NAFTA, the national debt, and foreign policy in war-torn corners of the globeQ felt strongly enough about Amateur Radio to propose to their colleagues a resolution commending amateurs and establishing Amateur Radio as a national resource, much like they do for National Parks!
Each version must pass its own house before the law can be enacted. But it must happen soon.

(...)

Q. How many do we have sofar?

A. We have as cosponsors 124 representatives and 22 senators. Not bad, but we've got a long way to go. Remember, we are aiming for 50 senators, and 218 or more representatives.

Q. What can I do to help get this passed?

A. It's as easy as 1-2-3:

(1) Check the list of senators and representatives in the sidebar.
(2) If your senators and/or representatives are NOT on the list, please send them a letter asking for support as a cosponsor. Explain that Amateur Radio is a noncommercial radio service of volunteers who step in to provide communications to the public in emergencies and contribute to the advancement of technology through our tradition of experimentation. Give some examples from your state, such as that tornado that ripped through your town, or the floods that swamped neighboring farmland. If you can't come up with a local example tell them how much hams helped out in the recent flood in the Midwest (see December 1993 QST, page 21, and quote some of those stirring words from the hams who helped out). If you can't send a letter, send your QSL card, annotated on the back along these lines.
Please do it now so that your letter will be waiting for him/her when he/she

returns to Capitol Hill for resumption of the 103rd session of Congress. (Your senators and representatives are listed in your phone book's "blue pages" under US Government, or use the simplified address:

The Honorable John Doe
Senate Office Building
Washington, DC 20510, or

The Honorable Jane Doe
House Office Building
Washington, DC 20515
).

[(2a) (kb8cne) If your senator or representative is *on* the list, send him/her a letter *thanking* him/her for recognizing the national importance of the amateur radio service.]

And now the easy, but very important step: (3)Pat your self on the back for being a part of the democratic process and helping make your government work for Amateur Radio!

(Feb 94 QST Update)

Have you done it yet? That is, have you written your US senators and your representative regarding the Amateur Radio Service Joint Resolution, S J Res 90/ H J Res 199, and the Amateur Radio Service Volunteer Service Act, H R 2623? You haven't? Go directly to January QST, pages 54 to 56Qdo not pass GO; do not collect DXCC credits! Read and react: we need your help in enacting the Amateur Radio Service Joint Resolution and the Amateur Radio Volunteer Service Act, H R 2623.

New cosponsors of the Amateur Radio Service Joint Resolution who have signed on since the January QST article was published (as of the time of this writing on January 4,1994) include Rep. Glen Browder (D, 13, AL), Rep. Jay Dickey (R, 4 AR), Rep. Vic Fazio (D, 3, CA), Rep. John Lewis (D, 5, GA), Rep. Sherwood Boehlert (R, 23, NY), Rep. Mike Sinar (D, 2, OK), Rep. Bill Brewster (D, 3, OK), Sen. Thomas A. Daschle (D, SD), Rep. Norman Sisisky (D, 4, VA) and Rep. Al Swift (D, 2, WA). Here's something you can do for Amateur Radio and for yourself; don't miss your chance to be a hero!

103rd Congress phone and fax numbers
==========

The following information is from the US Congress "Yellow Book," Jan. 1993. Four seats were vacant at that time, in CA, MS, OH, and WI. The list below of 436 people includes 5 non-voting members, from Guam (GU), Puerto Rico (PR), Samoa (SA), Virgin Islands (VI), and DC. (some of those abbreviations may be wrong)

Corrections welcome.

Mike Willis (M.Willis@ee.surrey.ac.uk) wrote:
: I would expect the limit on receiver bandwidth with DSP filters
: is more to do with the received signal characteristics than ringing.

I agree. In other words, it should be easy to design a CW filter with
the narrowest usable bandwidth that has negligible ringing.

1994 Annual Meeting,
Board of Directors
The American Radio Relay League
January 21-22, 1994
Summary Agenda

1. Roll Call
2. Moment of Silence
3. Consideration of the Agenda for the meeting
4. Approval of the Minutes of the 1993 Second Meeting
5. Reports by the Officers
6. Election of Officers
7. Election of the Executive Committee
8. Election of ARRL Foundation Directors
9. Receive reports and consider recommendations of the committees
10. Report of the Host Director, 1994 ARRL National Convention
11. Appointment of Committees
12. Directors' motions
13. Authorizations for certain administrative expenses

1. Pursuant to due notice, the Board of Directors of the American Radio Relay League, Inc., met in annual session at the Hartford Marriott Hotel, Rocky Hill, CT on Friday, January 21, 1994. The meeting was called to order at 8:30 AM EST with President George S. Wilson III, W4OYI, in the Chair and the following directors present:

* Kay C. Craigie, WT3P, Atlantic Division
Edmond A. Metzger, W9PRN, Central Division
Tod Olson, K0TO, Dakota Division
Joel M. Harrison, WB5IGF, Delta Division
Allan L. Severson, AB8P, Great Lakes Division
Stephen A. Mendelsohn, WA2DHF, Hudson Division
Lew Gordon, K4VX, Midwest Division
William Burden, WB1BRE, New England Division
Mary Lewis, W7QGP, Northwestern Division
Brad Wyatt, K6WR, Pacific Division
John C. Kanode, N4MM, Roanoke Division
Marshall Quiat, AG0X, Rocky Mountain Division
Frank M. Butler, W4RH, Southeastern Division
Fried Heyn, WA6WZO, Southwestern Division
Tom Comstock, N5TC, West Gulf Division

*Vice Director, in the seat for Hugh A. Turnbull, W3ABC, Director.

Also present as members of the Board without vote were Rodney J. Stafford, KB6ZV, First Vice President; Jay A. Holladay, W6EJJ, Vice President; Tom Frenaye, K1KI, Vice President; Larry E. Price, W4RA, International Affairs Vice President; Treasurer James McCobb, Jr., K1LLU; and David Sumner, K1ZZ, Executive Vice President. Chief Financial Officer Barry J. Shelley was present in his capacity as an officer of the corporation.
Also in attendance at the invitation of the Board as observers were the following Vice Directors: Howard Huntington, K9KM, Central Division; Hans Brakob, K0HB, Dakota Division; Rick Roderick, K5UR, Delta Division; George E. Race, WB8BGY, Great Lakes Division; Paul Vydareny, WB2VUK, Hudson Division; Bruce Frahm, K0BJ, Midwest Division; Warren Rothberg, WB1HBB, New England Division; Mary Lou Brown, NM7N, Northwestern Division; Jim Maxwell, W6CF, Pacific Division; C. Dennis Bodson, W4PWF, Roanoke Division; Bob Scupp, WB5YYX, Rocky Mountain Division; Evelyn Gauzens, W4WYR, Southeastern Division; and Art Goddard W6XD, Southwestern Division. There were also present General Counsel Christopher D. Imlay, N3AKD; Past Director Howard Mark, W0OZC; Publications Manager Mark J. Wilson, AA2Z; Membership Services Manager Charles L. Hutchinson, K8CH; Field Services Manager Richard K. Palm, K1CE; Technical Relations Manager Paul Rinaldo, W4RI; Public Information Manager Steve Mansfield, N1MZA; and Perry Williams, W1UED, Washington Area Coordinator.

2. The assembly observed a moment of silence in recollection of Radio Amateurs who have passed away since the previous Board meeting, especially John A. Anastas, KJ4EK, Vern Chambers, W1JEQ, Creed Chorpening, W4TZ, Lloyd Colvin, W6KG, Bill Harvey, WA6RXI, Irv Emig, W6GC, Clifford L. Kitts, KD4TZ, Glenn Koropp, W6YFW, Ted Heithecker, W5EJ, Donald Johnson, W6QIE, Sidney T. Kitrell, W0LYM, Tom McMullen, W1SL, Art Milne, G2MI, Jane W. Rhodes, N4PNL, and Jack Ryder, K4IHX.

3. The Chair introduced Past Vice President and Dakota Director Tod Olson, K0TO, returning to the Board after an absence; Mr. Olson introduced his new Vice Director, Hans Brakob, K0HB. The Chair introduced new Midwest Director Lew Gordon, K4VX; Mr. Gordon introduced his new Vice Direcor Bruce Frahm, K0BJ. The Chair introduced Pacific Director Brad Wyatt, K6WR, moving up from the Vice Director seat; Mr. Wyatt introduced his new Vice Director, Jim Maxwell, W6CF. Apologies for absence were offered for Atlantic Director Hugh Turnbull, W3ABC and West Gulf Division Vice Director Sam Sitton, KV5X, for each because of illness in the family.

4. On motion of Mr. Mendelsohn, seconded by Mr. Kanode, the agenda was ADOPTED as presented.

5. On motion of Mr. Harrison, seconded by Mr. Butler, the minutes of the 1993 Second Meeting were ADOPTED as presented.

6. At this point the Officers presented their annual reports and commented briefly on their recent activities. President Wilson's comprehensive report covered, inter alia, ARRL readiness for electronic filing of license data as soon as the FCC is ready; the League's aid to AMSAT for Phase 3D fundraising; the amateur-radio enforcement activities of FCC in 1993, usually with assistance of the Amateur Auxiliary; the negotiated amendment of FCC Rule 97.113, putting common sense into communications for public events; another rules-change bringing Novice exams into the VE system (without charge so far as the ARRL-VEC is concerned); FCC preemption of local ordinances inhibiting ham use of transceivers that could incidentally receive public service frequencies; much effort, behind the scenes and publicly, to restore club station licensing and provide for choice of call signs by amateurs; ARRL opposition to a "Quiet Zone" for all of Puerto Rico; the League's proposal for additional callsign blocks in Puerto Rico, Hawaii and Alaska; continued efforts to reach compromise rulemaking for autoforwarding of digital messages on HF; the rulemaking docket clarifying responsibility for automatic transmission of data messages as "Originator and First Forwarder"; efforts to assure that Government plans for wind profilers at 449 MHz would accommodate continued amateur use of the band; ARRL defense of the 902-928 MHz band as against an FCC rulemaking to expand the "Automatic Vehicle Monitoring" service there; the current rulemaking to provide amateurs with a secondary allocation from 219-220 MHz under certain restrictions; the FCC idea of "instant licenses" with self-assigned call signs for first-time licensees and ARRL's counter proposal that electronic filing is better; and finally, ARRL's legislative success in staving off administrative fees for amateurs, providing the basis for vanity call signs, adding protective phrases to the frequency give-back and auction bills and introduction of S.J.Res.90, H.J.Res.199 and H.R.2623.

7. In his report, First Vice President Stafford focused strongly on the growth of the Amateur Radio Service, particularly in Technician Class licensees, and the need for ARRL activities to attract this group. Mr. Stafford also reported on his service on the Long Range Planning Committee (LRPC), of which he is chairman, the Industry Advisory Council and the Administration and Finance Committee; and his attendance at the Region 1 Conference of the International Amateur Radio Union (IARU) in Belgium. Vice President Holladay covered his work with the LRPC effort including his support for the concept of a retreat where the League leadership can consider the issues raised by the LRPC; as a member of the Volunteer Resources Committee (VRC); his interest in local antenna cases, focused on obtaining a more reasonable set of regulations from the County of Los Angeles; and as Board liaison to the Shuttle Amateur Radio Experiment (SAREX)

Working Group. The tenth year of Amateur Radio operation from the Space Shuttle was highlighted by four SAREX missions and a great deal of favorable publicity for Amateur Radio. Next, Vice President Frenaye marked his membership on the Membership Services and Computer Committees, the ARRL Foundation Board, and the LRPC, especially focussing on the latter group's studies of delivering services to both HF and VHF communities. He remarked on the generosity of the League over the years in providing services to members and non-members alike; it may be time for review of our services to define which should continue open and which should be restricted to members. International Affairs Vice President Price summarized his travel as IARU Secretary to the International Red Cross, Geneva; IARU Region 2 Executive Committee meeting, Guayaquil, and government offices in Quito, both Ecuador; IARU Region 1 meeting, DeHaan and IARU Administrative Council meeting, Brussels, both Belgium; and the Radiocommunication Assembly of the International Telecommunication Union (ITU) and the ITU's first World Radiocommunication Conference (WRC-93) replacing the old WARCs, both Geneva. Travel under ARRL's banner included the last meeting of the Canadian Radio Relay League and the first of the Radio Amateurs of/du Canada in Toronto; and hamfests/conventions at Friedrichshafen, Germany, Miami, Orlando, Little Rock, Dayton, Manchester NH, and Memphis, and the ARRL National Convention in Huntsville, AL. He also participated in meetings of the Ad Hoc Committee on ARRL National Conventions, the Executive Committee, and the LRPC. Treasurer McCobb's report analyzed the performance of the League's investment portfolio and the market in general. The $8.5 million (market value, $9.1 million, an excess of 7% over book value) portfolio is invested 39% in stocks, 61% in bonds, yielding annualized dividends and interest of $509,500 in the aggregate. Sales from the portfolio were limited, and brought in a realized net gain of $72,000. In the marketplace as a whole, bond rates fell during the year, and remain low but somewhat volatile. The stock market rose during 1993, with the Dow Jones Industrial index at 3754, up 453 points or 14% over the end of 1992.

8. Executive Vice President Sumner's report opened with a nutshell characterization of the year: relative calm, moderate membership growth, modest success in new ventures, and a gradually emerging picture of what Amateur Radio will be like around the turn of the century and what kind of ARRL will be needed to serve it. An important tool in that process is the Readex survey of 1992. The staff Survey Task Force focused sharply on two areas: studies of ten potential projects aimed at recruiting and retaining members especially from the ranks of new hams, and response to two trends having significant implications for the ARRL -- (1) a growing majority of radio amateurs whose interest in Amateur Radio is locally focused, and (2) a growing

diversity of interest groups, each competing for scarce resources from the ARRL. The LRPC has recommended that the Board hold a planning retreat later this spring to discuss such issues without the harness of a business-driven agenda. Turning to Washington Office activities, Paul Rinaldo chaired a meeting of an ITU Task Group in Geneva, on wind profiler radars; Director Butler also attended the meeting, on behalf of the IARU. The Geneva meeting produced a report to WRC-97, the World Radiocommunication Conference at which wind profiler radar allocations will be considered. Rinaldo also chaired monthly US preparatory meetings, primarily of government agencies having an interest in wind profiler radars, and other monthly meetings with the National Telecommunications and Information Administration (NTIA) on coordination of wind profiler radar sites with the ARRL to avoid interference problems with repeaters at 448-450 MHz. Rinaldo also participated in US preparatory meetings for the ITU Voluntary Group of Experts charged with simplifying the Radio Regulations. International meetings of the VGE in Geneva are covered by Wojciech Nietyksza, SP5FM, on behalf of IARU. The final VGE meeting will be held in late February/early March 1994. Thus far, we have been able to head off any recommendations that could adversely affect the amateur services. International Affairs Vice President Price and Rinaldo attended WRC-93 as members of the IARU and US delegations respectively. The sole purpose of this WRC was to set the agendas for WRCs 95 and 97. Rinaldo and two IARU Region 2 officials also attended meetings of the Interamerican Telecommunication Council (CITEL), the regional telecommunications organization for Region 2. The CITEL approved a resolution concerning the creation of an International Amateur Radio Permit (IARP). The next step is to design a permit and necessary procedures, and to present it at the next CITEL committee meeting in 1994. Meanwhile, some progress, albeit slow, is being made toward the US becoming a signatory to the common license agreement adopted by the European Conference of Postal and Telecommunications Administrations (CEPT) which would permit US amateurs to operate in CEPT countries (and vice versa) without the need for issuance of a temporary license. Turning now to US matteclosed. Whereupon, the Chair declared Mr. Sumner elected as Secretary. (Applause)

20. The Chair opened nominations for the office of Treasurer. Mr. Severson nominated Mr. McCobb. On motion of Mr. Quiat, seconded by Mr. Harrison, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. McCobb elected as Treasurer. (Applause)

21. The Chair opened nominations for the office of Executive Vice President. Mr. Butler nominated Mr. Sumner. On motion of Mr.Harrison, seconded by Mr. Severson, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Sumner elected as Executive Vice President. (Applause)

22. The Chair opened nominations for the office of Chief Financial Officer. Mr. Severson nominated Mr. Shelley. On motion of Mr. Kanode, seconded by Mr. Metzger, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Shelley elected as Cheif Financial Officer. (Applause)

23. The Chair opened nominations for Director members of the Executive Committee for one-year terms. Mr. Kanode nominated Mr. Severson. Mr. Quiat nominated Mr. Butler. Mr. Butler nominated Mr. Quiat. Mr. Harrison nominated Mr. Mendelsohn. Mr. Mendelsohn nominated Mr. Harrison. On motion of Mr. Olson, seconded by Mr. Burden, it was VOTED that nominations are closed. The Tellers found that Messrs. Harrison, Mendelsohn. and Quiat were elected on the first ballot, and Mr. Severson on the second ballot. (Applause)

24. The Chair opened nominations for Directors of the ARRL Foundation. Mr. Metzger nominated the slate of Mr. Frenaye, Roger W. Franke, K9AYK and Mr. Comstock for three year terms, and Mr. Quiat for a two year term. On motion of Mr. Mendelsohn, seconded by Mrs. Lewis, it was VOTED that nominations are closed. Whereupon, the Chair declared Messrs. Frenaye, Franke, Comstock and Quiat elected as Directors of the ARRL Foundation. (Applause.) During the course of the above elections, Mr. McCobb left the meeting because of a business commitment.

25. Mr. Severson, as Chairman, presented the report of the Administration and Finance Committee. The Committee held three meetings since the Second Meeting of the Board in July as detailed in Minutes which have been distributed. Much time was devoted to the report of the Computer Committee on information services at HQ, and to the 1994-1995 plan which will be presented to the Board for adoption later in the meeting. On his motion, seconded by Mr. Burden, it was VOTED that the 1993 budget for the Midwest Division be amended to $8,888; an increase of $1,888. On his further motion, seconded by Mr. Comstock, it was VOTED that the 1993 budget for the Delta Division be amended to $13,053; an increase of $3,553.

26. Mr. Kanode, as Chairman, presented the report of the Membership Services Committee. This Committee also had three meetings since the July Board meeting. Mr. Kanode called attention to three items. The success of the new Official Family Operating Event will depend on the "Official Family" and the Field Organization getting on the air to operate in the event, and on QSLing with the Official Family cards. A new DXCC fee schedule appeared in the December issue of QST. Further expansion of the DXCC Field Checking program should wait until the new DXCC computer system is in place. Similarly, additional forms of DXCC should also wait until the computer upgrades are on line.

27. Mr. Butler, as vice chairman, presented the report of the Volunteer Resources Committee. VRC held two meetings in the period, and Minutes have been issued. Chairman McConnell highlighted several items in the report. National Exam Day for 1993 was regarded as a success, and the Committee recommended a continuation. Accordingly, two such days have been scheduled for 1994, in May and October. The task of recruiting additional volunteer examiners for Alaska continues. Terms of reference for the ARRL education awards have been revised with three awards for 1994: the Herb S. Brier Instructor of the Year, the ARRL Professional Instructor of the Year, and the ARRL Professional Educator of the Year. A list of materials available to members has been compileommended.

Because the plan for this band is use for inter-city links which can be assembled into a nationwide high-speed digital network, allocation of channels to point-to-point pairs running less than 56 Kilobits duplex should be discouraged. No matter what the bandwidth of the transmissions coordinated into a channel, they should be centered in the channel. The long term objective for digital transmission on these channels is 100 KHz bandwidth. Local Coordinating Bodies should seek to avoid decisions which will limit the nationwide network.

35. Mr. Mendelsohn, as Chairman, presented the interim report of the Ad Hoc Committee on Vanity Call Signs, formed in response to the FCC Notice of Proposed Rulemaking in PR Docket 93-305. The Committee's charge is to recommend a position on vanity call signs to the Board of Directors by mid-February. As much membership input as possible is to be sought. Based on input so far, the Committee suggests the vanity call sign system should be phased in with a series of four three-month windows before opening the system to all. Previously held call signs regardless of license class, format or call district should be available first. The second, third and fourth windows would be by license class to Extra Class, then Advanced, and then General. At the end of one year, any licensed amateur would be eligible for any call within his call area and license class blocks, or a lower class block. The fee should be a one-time occurrence, and should be refunded if none of the call signs on the application are available. Calls should be held for two years after expiration or trade-in, and should not be transferable; these measures should help preclude "trafficking" in call signs. If necessary, an in-person meeting of committee members will take place February 12 in the Dallas-Fort Worth area.

36. At this point, 2:45 PM, Mr. Wilson returned to the Chair. Mr. Price, as
Liaison, reported for the Biological Effects Committee; no formal report had been received from the chairman. The Board was in recess from 3:18 to 3:44 PM; Mr. Scupp took the seat for Mr. Quiat.

37. On motion of Mr. Severson, seconded by Mr. Burden, it was VOTED that the 1994-1995 Plan and Budget is adopted as presented to the Board by the Administration and Finance Committee.

38. Mr. Scupp, as Liaison, presented the report of the Public Relations Committee. Highlights: Tech Image replaced Selz Seabolt as the ARRL's PR firm, though many of the personnel involved are the same. ARRL's publicity efforts scored more than 100 major media hits and more than 25 major market television placements including an NBC story on SAREX and "Santa Ham" on CNN. The Associated Press picked up five stories, USA Today picked up two, and there were placements in at least 25 major metropolitan dailies. ARRL produced and began duplication of two public service announcements as reported by the Executive Vice President. With Steve Mansfield taking over the legislative function there will be a need for an additional PR person at HQ, to work under Steve's supervision. On motion of Mr. Severson, seconded by Mr. Scupp, it was VOTED that the Public Relations Committee Report is accepted. At this point, 3:49 PM, Mr. Quiat returned to his seat.

39. Mr. Stafford, as Chairman, presented the extensive report of the Long Range Planning Committee. The report summarized previous recommendations of the LRPC and actions taken by the ARRL as a result. The report set forth the assumptions made by the Committee, covered demographics, summarized interests of amateurs within the avocation, noted technologies which are emerging, touched on international and spectrum issues, predicted "The Regulatory Scene in the Year 2000" and closed with a vision of Amateur Radio and a summary of ARRL objectives. The LRPC recommends that a planning retreat be scheduled for the Board in the spring of 1994 to mull over these issues, without having to meetLeague, in Annual Meeting assembled, on this day, January 22, 1994, that the
Board does hereby express its deepest appreciation and gratitude to Perry F. Williams, W1UED, for his many contributions to Amateur Radio and the League; and

BE IT FURTHER RESOLVED that the Board extends its warmest personal wishes for a long, enjoyable, and productive retirement. (Applause and standing ovation)

76. On motion of Mr. Mendelsohn, again seconded by the entire group, it was unanimously VOTED that the Board assembled in Annual Meeting at Rocky Hill, Connecticut on this 22nd day of January, 1994, thanks Lisa DeLude, Perry Williams, Rick Palm, Chuck Hutchinson, Steve Mansfield and Mark Wilson for their key support in making this Board Meeting a great success. (Applause).

77. At this point, an opportunity was given for every member of the assembly to offer comments. There being no further business, the Board adjourned sine die at 12:45 PM. (Time in session as a Board 9 hours and 28 minutes: as a Committee of the Whole: 1 hour and 6 minutes; total direct authorizations: $293,441.)

850. Re: RAMSEY FX TRANSCEIVER

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-29 03:10:19 UTC
From: stoll@OCF.Berkeley.EDU
Message-ID: <2ick2r$cof@agate.berkeley.edu>
Source record: 271872

Hi Gang,

When you hear me on 2 Meters, it's on a Ramsey FXT-146.
Assembled by yours truly. Works peachy.

Why? I love to learn about rf and electronics. Can't get
enough of it. I want to smell the solder, touch the
resistors, and bolt down the cabinet. And, oh, the feeling
when you turn it on and it works... aaah.

OK, so maybe I've got lead poisoning, squinty eyes, and
wrenched fingers. Still, I know where the rf is coming from,
how the circuits work, and why that phase lock loop stays put.
Hot ziggity!

I've met John Ramsey -- you might think he's in business to
make money. I know better ... he's in it (like most hams)
for the fun. At a hamfest, I saw his wife give a kit to a
beaming 12 year old kid who asked if he was able to build it.
At his outlet, I watched John gave a half dozen free LEDs to
a guy, saying "Here, figure out something to use these for."
This weekend, I'm building his traffic radar kit; he tells
you how to solder two coffee cans together. "...If you don't
clean the surface, the solder will just roll up into little
balls and laugh at you...".

By Sunday, I'll be measuring the speed of cars zipping in
front of my house. Sure, I could buy a radar set (though I
don't know where), but thanks to Ramsey, I know how the
doppler shift gets mixed down and sent into a frequency
counter. Hell, I soldered that hot carrier diode.

Yes, if you want the highest performance, buy a Japanese
transceiver. You can't go wrong there. And for a bargain,
hunt down some used gear. No complaints from me

But to get a feel for the circuits -- for rf with love -- for
happy electrons ... well, ask me what I'm using when you next
hear me on the air.

Dunno about the others, but NBC provides its OWN frame synchronizers to each affiliate as part of their KU-band downlink package. So that's one item down right there.

(P.S. A cable system near Louisville accidentally carried a scrambled ABC net feed on a spare channel one day; I was visiting a friend in that town who has a new TV with a caption decoder, and it turned out that line 21 is *not* affected by the encryption. I was able to get perfectly good captions over a scrambled picture!)

Les Reeves <lreeves@crl.com> writes:

>In other words, what sort of digitization of video is going on in these
>frame synch boxes? As good as D2? Almost D1?

The sampling rate is almost always 14.31818... MHz, or four times subcarrier;
older units used eight bits (same as D-2 and D-3), but newer ones use ten-bit
processing.

Jerry, I myself have used both and found the DJ-162 all around better in its operations as well as its structure. The HTX-202 has no Mod info and is virtually an unknown radio internally. Maybe time will change that, but meantime technology moves on.

855. Contacts for arranging formal sked with SAREX?

Newsgroup: rec.radio.amateur.misc

As the header reads, is there any way I can contact the SAREX (Shuttle Amateur Radio eXperiment) coordinator or anyone else in a significant position within the SAREX program? I am with the UT Amateur Radio Club, and we need to arrange a formal communications schedule [if possible] between ourselves and the astronaut-hams aboard two of the SAREX carrying missions set for this year (one for April [which we are hoping for the most], one for November).

FYI: we are hoping to do this partly out of personal interest, and partly as PR within Austin and central Texas [or as far as the news will reach] for our club and for space exploration and amateur radio as a whole.

Thanx and 73's,

Robert Camama

861. Coaxial cable

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-29 12:08:42 UTC
From: ykchoy@ee.cuhk.hk
Message-ID: <CKE4EJ.3Fr@eng_ser1.ie.cuhk.hk>
Source record: 271842

Hello,

I'd like to have some good quality coaxial cable. Can you give
me any suggestions if you know?

I am making a project on global position system. Previously, I used
a coaxial cable of 10 M to connect the antenna and the GPS together.
It worked normally. However, when I change the cable to be 80 M in
length, I can't get any signals. I suspect that the signal loss in
such a long cable is very great. So I want to buy a cable of
better quality to reduce the loss.

Now, I am using a 50 ohm cable, RG-58 A/U!

Thanks!

I made a mistake on my end here, BAD typo! The correct address should be:

cs.buffalo.edu 2000 or 128.205.32.2

again, the word 'callsign' was not needed here. sorry for the trouble.

73 to all - shawn

>right there.

If this wasn't clear, the NBC provided frame sync uses the local station's generator as it's reference. However, there is one NBC provided frame sync and 4 NBC provided receivers, so only one of the downlinks can be using the frame sync at a time. The local station engineers have control of that via their Fluke touchscreen terminal. At times they may wish to use the frame sync for their own purposes while airing network "raw", or through one of their other in house frame syncs, or from one of the other receiver channels. For example WXIA-TV delay broadcasts _Friday Night_ an hour later than the East coast feed on K2-1. So they use the 2E receiver to pick up the Mountain feed on K2-9 and air that through one of their own in house frame syncs while leaving the NBC frame sync on the 1R receiver from which they are taping another program for a different delayed broadcast.

Worse, some stations use a frame sync on their output line as a final TBC and proc amp. So everything transmitted is referenced to whatever timing source drives that frame sync's reference input. This is sometimes done at the transmitter site using a local sync generator. A good reason to do this is to protect the transmitter from ever being fed a signal with no sync. (That makes transmitters very unhappy since it sets their duty cycle to 100% CW. A frame sync always outputs sync, even if it has no input signal.) A Grass Valley 900 proc amp can do the same thing, but as has been noted, frame syncs are so cheap now that proc amps are obsolete.

mmollere@triton.uwf.edu (Sluggo) writes:

>Am looking for code tapes in Pensacola, FL. If anyone knows where
>where I can get same, please advise. Also, is there code on
>instruction on CD? Thanx.

I heartily recommend the ARRL tapes. They really work. They have tapes for anyone from the rankest beginner (like I was!) to those working on their Extra licenses. Each tape progresses slowly, adding a new character at a time (on the "Your Introduction to Morse Code" tape) or gradually increasing the speed on the other tapes. Except for one tape offered with standard timing, everything is done with Farnsworth timing, meaning the characters are sent at 18 wpm but spaced to give an overall lower speed.

I started working with them around the end of December, spending a few minutes here and few minutes there. Not what you'd call a rigorous schedule. My starting point was knowing almost nothing. Already, just a month later, I'm finding I can copy quite solidly up to around 8 wpm or so (I'm amazed to be able to say 5 wpm actually sounds SLOW now!) and do pretty well (say 80% or so) copying up to around 10 to 13 wpm. And because the tapes have drilled me to recognize 18 wpm character timings, I find I can even listen to the W1AW code bulletins (at 18 wpm) and even recognize the characters as they go by (though I can't think fast enough to translate that to writing them down or recognizing what the words are at that rate.)

I'll be taking my Novice & Technician exams on the 7th; I'm now _totally_ comfortable knowing I can walk in and do it.

I really didn't expect to make anything like this sort of progress and I do attribute it to the ARRL tapes. I should mention I did also buy the AMECO tapes (to try them also) and they were useless IMHO. So there really is a difference.

You can get the ARRL tapes direct from ARRL (look in QST) or from most ham stores like Ham Radio Outlet.

In article <19940128.22424315.edellers@delphi.com> edellers@delphi.com (Ed Ellers) writes:
>The sampling rate is almost always 14.31818... MHz, or four times subcarrier;
>older units used eight bits (same as D-2 and D-3), but newer ones use ten-bit
>processing.

While we're on the subject, it's worthy of note that (apparently by FCC
fiat):

* the color subcarrier is 3,579,545 Hz +- 10 Hz
* the horizontal scan frequency is 2/455 times the chroma subcarrier freq.
* the vertical scan freq. is 2/525 times the horizontal scan freq.

So, 14,318,180 Hz makes a fine frequency reference for generating sync
as well as a neat sampling rate for frame stores.

Don't know if this has been said before, but I haven't seen it (recent
news troubles here... meeee, screw up the permissions? Nawwww).

1994 Annual Meeting,
Board of Directors
The American Radio Relay League
January 21-22, 1994
Summary Agenda

1. Roll Call
2. Moment of Silence
3. Consideration of the Agenda for the meeting
4. Approval of the Minutes of the 1993 Second Meeting
5. Reports by the Officers
6. Election of Officers
7. Election of the Executive Committee
8. Election of ARRL Foundation Directors
9. Receive reports and consider recommendations of the committees
10. Report of the Host Director, 1994 ARRL National Convention
11. Appointment of Committees
12. Directors' motions
13. Authorizations for certain administrative expenses

1. Pursuant to due notice, the Board of Directors of the American Radio Relay League, Inc., met in annual session at the Hartford Marriott Hotel, Rocky Hill, CT on Friday, January 21, 1994. The meeting was called to order at 8:30 AM EST with President George S. Wilson III, W4OYI, in the Chair and the following directors present:

* Kay C. Craigie, WT3P, Atlantic Division
Edmond A. Metzger, W9PRN, Central Division
Tod Olson, K0TO, Dakota Division
Joel M. Harrison, WB5IGF, Delta Division
Allan L. Severson, AB8P, Great Lakes Division
Stephen A. Mendelsohn, WA2DHF, Hudson Division
Lew Gordon, K4VX, Midwest Division
William Burden, WB1BRE, New England Division
Mary Lewis, W7QGP, Northwestern Division
Brad Wyatt, K6WR, Pacific Division
John C. Kanode, N4MM, Roanoke Division
Marshall Quiat, AG0X, Rocky Mountain Division
Frank M. Butler, W4RH, Southeastern Division
Fried Heyn, WA6WZO, Southwestern Division

Tom Comstock, N5TC, West Gulf Division

*Vice Director, in the seat for Hugh A. Turnbull, W3ABC, Director.

Also present as members of the Board without vote were Rodney J. Stafford, KB6ZV, First Vice President; Jay A. Holladay, W6EJJ, Vice President; Tom Frenaye, K1KI, Vice President; Larry E. Price, W4RA, International Affairs Vice President; Treasurer James McCobb, Jr., K1LLU; and David Sumner, K1ZZ, Executive Vice President. Chief Financial Officer Barry J. Shelley was present in his capacity as an officer of the corporation.
Also in attendance at the invitation of the Board as observers were the following Vice Directors: Howard Huntington, K9KM, Central Division; Hans Brakob, K0HB, Dakota Division; Rick Roderick, K5UR, Delta Division; George E. Race, WB8BGY, Great Lakes Division; Paul Vydareny, WB2VUK, Hudson Division; Bruce Frahm, K0BJ, Midwest Division; Warren Rothberg, WB1HBB, New England Division; Mary Lou Brown, NM7N, Northwestern Division; Jim Maxwell, W6CF, Pacific Division; C. Dennis Bodson, W4PWF, Roanoke Division; Bob Scupp, WB5YYX, Rocky Mountain Division; Evelyn Gauzens, W4WYR, Southeastern Division; and Art Goddard W6XD, Southwestern Division. There were also present General Counsel Christopher D. Imlay, N3AKD; Past Director Howard Mark, W0OZC; Publications Manager Mark J. Wilson, AA2Z; Membership Services Manager Charles L. Hutchinson, K8CH; Field Services Manager Richard K. Palm, K1CE; Technical Relations Manager Paul Rinaldo, W4RI; Public Information Manager Steve Mansfield, N1MZA; and Perry Williams, W1UED, Washington Area Coordinator.

2. The assembly observed a moment of silence in recollection of Radio Amateurs who have passed away since the previous Board meeting, especially John A. Anastas, KJ4EK, Vern Chambers, W1JEQ, Creed Chorpening, W4TZ, Lloyd Colvin, W6KG, Bill Harvey, WA6RXI, Irv Emig, W6GC, Clifford L. Kitts, KD4TZ, Glenn Koropp, W6YFW, Ted Heithecker, W5EJ, Donald Johnson, W6QIE, Sidney T. Kitrell, W0LYM, Tom McMullen, W1SL, Art Milne, G2MI, Jane W. Rhodes, N4PNL, and Jack Ryder, K4IHX.

3. The Chair introduced Past Vice President and Dakota Director Tod Olson, K0TO, returning to the Board after an absence; Mr. Olson introduced his new Vice Director, Hans Brakob, K0HB. The Chair introduced new Midwest Director Lew Gordon, K4VX; Mr. Gordon introduced his new Vice Direcor Bruce Frahm, K0BJ. The Chair introduced Pacific Director Brad Wyatt, K6WR, moving up from the Vice Director seat; Mr. Wyatt introduced his new Vice Director, Jim Maxwell, W6CF. Apologies for absence were offered for Atlantic Director Hugh Turnbull, W3ABC and West Gulf Division Vice Director Sam Sitton, KV5X, for each because of illness in the family.

4. On motion of Mr. Mendelsohn, seconded by Mr. Kanode, the agenda was ADOPTED as presented.

5. On motion of Mr. Harrison, seconded by Mr. Butler, the minutes of the 1993 Second Meeting were ADOPTED as presented.

6. At this point the Officers presented their annual reports and commented briefly on their recent activities. President Wilson's comprehensive report covered, inter alia, ARRL readiness for electronic filing of license data as soon as the FCC is ready; the League's aid to AMSAT for Phase 3D fundraising; the amateur- radio enforcement activities of FCC in 1993, usually with assistance of the Amateur Auxiliary; the negotiated amendment of FCC Rule 97.113, putting common sense into communications for public events; another rules-change bringing Novice exams into the VE system (without charge so far as the ARRL-VEC is concerned); FCC preemption of local ordinances inhibiting ham use of transceivers that could incidentally receive public service frequencies; much effort, behind the scenes and publicly, to restore club station licensing and provide for choice of call signs by amateurs; ARRL opposition to a "Quiet Zone" for all of Puerto Rico; the League's proposal for additional callsign blocks in Puerto Rico, Hawaii and Alaska; continued efforts to reach compromise rulemaking for autoforwarding of digital messages on HF; the rulemaking docket clarifying responsibility for automatic transmission of data messages as "Originator and First Forwarder"; efforts to assure that Government plans for wind profilers at 449 MHz would accommodate continued amateur use of the band; ARRL defense of the 902-928 MHz band as against an FCC rulemaking to expand the "Automatic Vehicle Monitoring" service there; the current rulemaking to provide amateurs with a secondary allocation from 219-220 MHz under certain restrictions; the FCC idea of "instant licenses" with self-assigned call signs for first-time licensees and ARRL's counter proposal that electronic filing is better; and finally, ARRL's legislative success in staving off administrative fees for amateurs, providing the basis for vanity call signs, adding protective phrases to the frequency give-back and auction bills and introduction of S.J.Res.90, H.J.Res.199 and H.R.2623.

7. In his report, First Vice President Stafford focused strongly on the growth of the Amateur Radio Service, particularly in Technician Class licensees, and the need for ARRL activities to attract this group. Mr. Stafford also reported on his service on the Long Range Planning Committee (LRPC), of which he is chairman, the Industry Advisory Council and the Administration and Finance Committee; and his attendance at the Region 1 Conference of the International Amateur Radio Union (IARU) in Belgium. Vice President Holladay covered his work with the LRPC effort including his support for the concept of a retreat where the League leadership can consider the issues raised by the LRPC; as a member of the Volunteer Resources Committee (VRC); his interest in local antenna cases, focused on obtaining a more reasonable set of regulations from the County of Los Angeles; and as Board liaison to the Shuttle Amateur Radio Experiment (SAREX) Working Group. The tenth year of Amateur Radio operation from the Space Shuttle was highlighted by four SAREX missions and a great deal of favorable publicity for Amateur Radio. Next, Vice President Frenaye marked his membership on the Membership Services and Computer Committees, the ARRL Foundation Board, and the LRPC, especially focussing on the latter group's studies of delivering services to both HF and VHF communities. He remarked on the generosity of the League over the years

in providing services to members and non-members alike; it may be time for review of our services to define which should continue open and which should be restricted to members. International Affairs Vice President Price summarized his travel as IARU Secretary to the International Red Cross, Geneva; IARU Region 2 Executive Committee meeting, Guayaquil, and government offices in Quito, both Ecuador; IARU Region 1 meeting, DeHaan and IARU Administrative Council meeting, Brussels, both Belgium; and the Radiocommunication Assembly of the International Telecommunication Union (ITU) and the ITU's first World Radiocommunication Conference (WRC-93) replacing the old WARCs, both Geneva. Travel under ARRL's banner included the last meeting of the Canadian Radio Relay League and the first of the Radio Amateurs of/du Canada in Toronto; and hamfests/conventions at Friedrichshafen, Germany, Miami, Orlando, Little Rock, Dayton, Manchester NH, and Memphis, and the ARRL National Convention in Huntsville, AL. He also participated in meetings of the Ad Hoc Committee on ARRL National Conventions, the Executive Committee, and the LRPC. Treasurer McCobb's report analyzed the performance of the League's investment portfolio and the market in general. The $8.5 million (market value, $9.1 million, an excess of 7% over book value) portfolio is invested 39% in stocks, 61% in bonds, yielding annualized dividends and interest of $509,500 in the aggregate. Sales from the portfolio were limited, and brought in a realized net gain of $72,000. In the marketplace as a whole, bond rates fell during the year, and remain low but somewhat volatile. The stock market rose during 1993, with the Dow Jones Industrial index at 3754, up 453 points or 14% over the end of 1992.

8. Executive Vice President Sumner's report opened with a nutshell characterization of the year: relative calm, moderate membership growth, modest success in new ventures, and a gradually emerging picture of what Amateur Radio will be like around the turn of the century and what kind of ARRL will be needed to serve it. An important tool in that process is the Readex survey of 1992. The staff Survey Task Force focused sharply on two areas: studies of ten potential projects aimed at recruiting and retaining members especially from the ranks of new hams, and response to two trends having significant implications for the ARRL -- (1) a growing majority of radio amateurs whose interest in Amateur Radio is locally focused, and (2) a growing diversity of interest groups, each competing for scarce resources from the ARRL. The LRPC has recommended that the Board hold a planning retreat later this spring to discuss such issues without the harness of a business-driven agenda. Turning to Washington Office activities, Paul Rinaldo chaired a meeting of an ITU Task Group in Geneva, on wind profiler radars; Director Butler also attended the meeting, on behalf of the IARU. The Geneva meeting produced a report to WRC-97, the World Radiocommunication Conference at which wind profiler radar allocations will be considered. Rinaldo also chaired monthly US preparatory meetings, primarily of government agencies having an interest in wind profiler radars, and other monthly meetings with the National Telecommunications and Information Administration (NTIA) on coordination of wind profiler radar sites with the ARRL to avoid interference problems with repeaters at 448-450 MHz. Rinaldo also participated in US

preparatory meetings for the ITU Voluntary Group of Experts charged with simplifying the Radio Regulations. International meetings of the VGE in Geneva are covered by Wojciech Nietyksza, SP5FM, on behalf of IARU. The final VGE meeting will be held in late February/early March 1994. Thus far, we have been able to head off any recommendations that could adversely affect the amateur services. International Affairs Vice President Price and Rinaldo attended WRC-93 as members of the IARU and US delegations respectively. The sole purpose of this WRC was to set the agendas for WRCs 95 and 97. Rinaldo and two IARU Region 2 officials also attended meetings of the Interamerican Telecommunication Council (CITEL), the regional telecommunications organization for Region 2. The CITEL approved a resolution concerning the creation of an International Amateur Radio Permit (IARP). The next step is to design a permit and necessary procedures, and to present it at the next CITEL committee meeting in 1994. Meanwhile, some progress, albeit slow, is being made toward the US becoming a signatory to the common license agreement adopted by the European Conference of Postal and Telecommunications Administrations (CEPT) which would permit US amateurs to operate in CEPT countries (and vice versa) without the need for issuance of a temporary license. Turning now to US matters, the ARRL documented amateur UHF band usage and other technical information as part of NTIA's study of frequency bands the government might "give back" to the private sector. An ARRL paper on progress in amateur packet radio was presented at a Federal Emergency Management Administration (FEMA) conference in August. In other matters related to HF digital codes, a draft protocol specification on Pactor has been received from the German amateur radio society. The president of HAL Communications was also requested to provide a protocol specification for CLOVER. Published specifications of Pactor and CLOVER could be incorporated by reference in Part 97 as technical amendments without the need for rulemaking. Moving on to public relations in Amateur Radio, 1993 was another successful year. Best news media coverage was for SAREX aboard October's STS-58 shuttle mission. Other big Amateur Radio stories included the "Blizzard of 93," Amateur Radio communication out of Bosnia, the so-called "Death of CW" stories originating from the Coast Guard's decision to drop CW on medium wave, and the Indian earthquake. The Los Angeles fires generated less coverage than expected. The Atlanta Constitution ran a series on getting involved in Amateur Radio. Two video public service announcements were completed in 1993 featuring astronaut Linda Godwin, N5RAX and Nobel Prize winning Physicist Joe Taylor, K1JT. The spots will be distributed nationally early in 1994; radio spots will be made from the sound tracks. Moving to the ARRL Publications Group, the Educational Activities Department handles an average 1,182 calls per month from prospects and new hams on its 1-800 line. The calls not only are helpful to the new and prospective hams, they also provide a sales opportunity for educational publications and videos, with average volume about $15,000 per month. The department supported a record four successful Shuttle Amateur Radio Experiment (SAREX) missions. Highlights include: an exchange between orbiting STS-57 astronauts and President Clinton about SAREX; a very high number of QSOs on STS-58 (over 500 QSLs received); and lesson plans enhanced by NASA lithographs sent to over 450

schools or volunteers. The EAD supported the Boy Scout National Jamboree, and the Jamboree-on-the-Air. Our ad in Boys Life magazine culled 400 young callers who were sent information. The EAD sponsored a booth at the Girl Scout Council National Convention, and produced a national Girl Scout brochure. New Prospect mailings averaged 1000 per month. The growth of licensed youth under age 21 continues, partly due to EAD activities. The EAD recently surveyed its registered instructors: about 25% (508) responded. They teach 864 classes per year, with 7,400 students in their last classes. In 1993, 6,891 students passed their Amateur Radio exams. A similar survey of educators who use ham radio in the classroom got 213 responses reporting 1,629 students in their licensing classes. Some 580 students passed Amateur Radio exams in 1993. Through SAREX and other demonstrations, 11,863 students were exposed to Amateur Radio in 1993. Average requests the EAD has fulfilled per month: 60 instructor packages, 40 school teacher packages, 50 sets of material for mall or fair displays and 30 sets of materials for school, Scout or youth-group demonstrations. At ham conventions in the last half of 1993, EAD sponsored six educator forums and workshops, and two youth forums, and supported five educational forums put on by volunteers. Articles describing these programs were printed in the 1993 edition of Proceedings of the ARRL National Educational Workshop. The EAD sponsored another all-day DSP workshop (taught by Jon Bloom, KE3Z) at the Southwestern Division Convention. Turning to the QST Editorial Branch, Al Brogdon, K3KMO, in October joined the staff as Managing Editor. "New Ham Companion" continues to draw praise from new hams and long-time members alike. Strong advertising revenues--and thus, hefty issues--continue, and we've been able to fill the editorial pages with a variety of interesting and useful material. We have made changes and improvements to QEX, now 32 pages per issue, and we are finalizing plans to upgrade the mailing to Second Class to improve service. Trey Garlough, WN4KKN, took the helm as National Contest Journal (NCJ) editor with the August/September issue. "Hampass" exam review software for the Novice/Technician class exams will be offered for sale in DOS and Windows versions. The Technician Class Exam Video Course, produced in conjunction with King Schools, sold more than 1000 copies through December. Customer feedback continues to be overwhelmingly positive. The Laboratory has improved the Technical Information Service (TIS), using new information packages to efficiently answer common technical questions. During 1993, the Lab staff received about 5000 TIS questions by phone, mail and electronic mail. The ARRL Automated Electronic Mail server also filled 38,000 requests electronically. Product Review testing continues to increase. During the second half of the year 16 transceivers (HF and VHF), 2 receivers and 9 miscellaneous items were tested. In the area of Membership Services, the DXCC backlog went away in mid-June; DXCC staff has been returning applications in less than three weeks, though DXCC 1993 work load was up 14% over 1992. Reaction to the new ARRL Friendship Award has been universally favorable. Start date for this award was November 1. By mid-December, we had received 200 applications at HQ and served 450 other applicants through 36 different clubs. The flow of members' cards into the QSL service continues to decline, 18% below the number shipped in 1993, a clear

indication of the continuing downward trend in operating conditions. Membership satisfaction remains high, and we continue to turn cards around in one week. W1AW is now using phased Yagis for 20-meter bulletins and code practice. Turning to the Field Services Department, the first "New Section Manager Training and Motivational Workshop" was held August 6-8, in Denver. The workshop introduced the new Section Managers to the League's organizational structure and functions, management techniques, and, especially, an understanding of the importance of the SM's role in the organization and in Amateur Radio at large. The final section of the report dealt with the volunteer examining program. The ARRL/VEC share of the exam load for the first nine months of 1993 is 55.5%. Examination activity YTD in the period lags 1992 activity by 4.3% (93,322 elements in YTD '93 versus 97,549 for YTD '92). ARRL VE ranks continue to grow, with 20,030 examiners compared to 17,045 as of November 26, 1992). Of ARRL VEs, 15,786 hold the Extra class; 3,932 hold the Advanced class; and 312 hold General class license VE credentials. Examination irregularities in the Los Angeles area have been an area of extra focus for the VEC Department for the past several months with suspension of accreditations for 17 ARRL VEs. Four tests (with 69 applicants who earned element credit toward a new license or upgrade) have been invalidated. Examination records are in the FCC's hands at their request. The VEC Department is prepared to go "on line" as soon as the FCC implements electronic filing of Form 610 license applications, some time in 1994. The FCC plans to put a new 610 form into use in 1994 when the FCC's new computer software (with its new data entry screens) goes on line for the amateur service. A solicitation was made to nearly 1500 Alaskan licensees in September. To date, 52 persons have responded expressing interest in becoming VEs. A new General class question pool was released on November 29, 1993 for July 1, 1994 implementation into exams.

9. Mr. Shelley presented his report as Chief Financial Officer. The past twelve months have been busy with much accomplished in the past year in the Business Services Group as we began to adapt our processes to new technology and changing market circumstances. Financial results for 1993, from all indications, will exceed our projections for excess of revenues over expenses by a significant margin. This result was achieved primarily through better than expected results in the areas of dues and sales of advertising, despite the fact that publication sales will be below our original projections for the year across all our major book categories. Membership remained strong and again grew slightly. The New Ham Companion promotional piece debuted early in the year and proved successful almost immediately. This piece was also a hit with advertisers and we were able to defray a significant portion of the costs of the promotion through the revenues received. Advertising revenues also grew in 1993 over the prior year despite a rate increase on QST advertising. The New Ham Companion promotional piece mentioned above provided a new source of revenues which also added to the total. Generally, expenses look to be at the level we had planned when we laid out the 1993 budgets. Postage costs were slightly higher than anticipated across the board as the USPS and Congress are targeting non-profit mailers for new rate increases. This will be a

continuing source of concern in 1994 and beyond. The Information Services Department centered on improving the technology we use at HQ, such as helping the DXCC Branch resolve the processing backlog. Enhancements to the original DXCC software were developed that aided in streamlining the actual processing steps. A second item in the area of technology was the staff work done to support the newly created Ad Hoc Computer Advisory Committee. A significant amount of time was spent detailing the uses of the computer at HQ and providing the Committee with information on our existing configurations. The League's presence at the Dayton Hamvention was expanded; our newly designed and larger booth space drew favorable comments. The report concluded with appreciation for the work done by the whole HQ staff in meeting ARRL goals.

10. Mr. Imlay presented the report of the General Counsel, covering spectrum allocation matters, FCC regulatory proceedings, pending petitions at FCC, antenna and radio frequency interference litigation, and other legal matters.

11. Mr. Metzger, as President, presented the report of the ARRL Foundation, Inc. Contributions during 1993 increased our assets to a total of $607,907. Scholarships and grants of $25,672 were dispensed during 1993. Two new scholarship funds were established, the Fred R. McDaniel Memorial Scholarship by Dr. Herman R. Muns, W5UKM and his wife Sandra Muns, KB5WHK, and the Six Meter Club of Chicago, a perpetual scholarship to benefit Illinois and other Central Division students. The Foundation has received many requests for the Simple Will Kit; these can be received from Foundation Secretary Mary E. Carcia, N7IAL at ARRL HQ. This year, the Foundation is celebrating its 20th anniversary. Its officers and directors for 1993 were: Edmond A. Metzger, W9PRN, President; Tom Frenaye, K1KI, Vice President; Roger W. Franke, K9AYK, Treasurer; Directors John C. Kanode, N4MM; Eugene Hastings, W1VRK; Dick Eilers, W0YZV; Frank M. Butler, Jr., W4RH; Bill McGrannahan, K0ORB; and Tom Comstock, N5TC. Other officers were President Emeritus Robert York Chapman W1QV and Secretary Mary E. Carcia, N7IAL.

12. The Chair noted the absence of Radio Amateurs of Canada President J. Farrell Hopwood, VE7RD, who had advised that he would be unable to attend.

13. At this point, the Chair opened nominations for the office of President. Mr. Comstock nominated Mr. Wilson. On motion of Mr. Mendelsohn, seconded by Mr. Quiat, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Wilson elected as President. (Applause)

14. The Chair opened nominations for the office of First Vice President. Mr. Quiat nominated Mr. Stafford. On motion of Mr. Mendelsohn, seconded by Mrs. Lewis, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Stafford elected as First Vice President. (Applause)

15. The Chair opened nominations for the office of an additional vice president. Mr. Comstock nominated Mr. Holladay. Mr. Olson nominated Mr. Mark. Mr. Kanode nominated Mr. Turnbull. On motion of Mr. Mendelsohn,

seconded by Mr. Harrison, it was VOTED that nominations are closed. The Chair appointed Mrs. Brown, Mr. Vydareny, and Mr. Race as Tellers. The Tellers found 9 votes for Mr. Holladay, 5 votes for Mr. Mark and 1 vote for Mr. Turnbull. Whereupon, the Chair declared Mr. Holladay elected as a vice president. (Applause)

16. The Chair opened nominations for the office of an additional vice president. Mr. Kanode nominated Mr. Turnbull. Mr. Harrison nominated Mr. Frenaye. On motion of Mr. Comstock, seconded by Mr. Quiat, it was VOTED that nominations are closed. The Tellers found 13 votes for Mr. Frenaye, and 2 votes for Mr. Turnbull. Whereupon, the Chair declared Mr. Frenaye elected as a vice president. (Applause)

17. The Board was in recess from 10:06 to 10:30 AM.

18. The Chair opened nominations for the office of International Affairs Vice President. Mr. Olson nominated Mr. Price. On motion of Mr. Burden, seconded by Mr. Kanode, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Price elected as International Affairs Vice President. (Applause.)

19. The Chair opened nominations for the office of Secretary. Mr. Kanode nominated Mr. Sumner. On motion of Mr. Severson, seconded by Mr. Mendelsohn, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Sumner elected as Secretary. (Applause)

20. The Chair opened nominations for the office of Treasurer. Mr. Severson nominated Mr. McCobb. On motion of Mr. Quiat, seconded by Mr. Harrison, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. McCobb elected as Treasurer. (Applause)

21. The Chair opened nominations for the office of Executive Vice President. Mr. Butler nominated Mr. Sumner. On motion of Mr.Harrison, seconded by Mr. Severson, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Sumner elected as Executive Vice President. (Applause)

22. The Chair opened nominations for the office of Chief Financial Officer. Mr. Severson nominated Mr. Shelley. On motion of Mr. Kanode, seconded by Mr. Metzger, it was VOTED that nominations are closed. Whereupon, the Chair declared Mr. Shelley elected as Cheif Financial Officer. (Applause)

23. The Chair opened nominations for Director members of the Executive Committee for one-year terms. Mr. Kanode nominated Mr. Severson. Mr. Quiat nominated Mr. Butler. Mr. Butler nominated Mr. Quiat. Mr. Harrison nominated Mr. Mendelsohn. Mr. Mendelsohn nominated Mr. Harrison. On motion of Mr. Olson, seconded by Mr. Burden, it was VOTED that nominations are closed. The Tellers found that Messrs. Harrison, Mendelsohn. and Quiat were elected on the first ballot, and Mr. Severson on the second ballot. (Applause)

24. The Chair opened nominations for Directors of the ARRL Foundation. Mr. Metzger nominated the slate of Mr. Frenaye, Roger W. Franke, K9AYK and Mr. Comstock for three year terms, and Mr. Quiat for a two year term. On motion of Mr. Mendelsohn, seconded by Mrs. Lewis, it was VOTED that nominations are closed. Whereupon, the Chair declared Messrs. Frenaye, Franke, Comstock and Quiat elected as Directors of the ARRL Foundation. (Applause.) During the course of the above elections, Mr. McCobb left the meeting because of a business commitment.

25. Mr. Severson, as Chairman, presented the report of the Administration and Finance Committee. The Committee held three meetings since the Second Meeting of the Board in July as detailed in Minutes which have been distributed. Much time was devoted to the report of the Computer Committee on information services at HQ, and to the 1994-1995 plan which will be presented to the Board for adoption later in the meeting. On his motion, seconded by Mr. Burden, it was VOTED that the 1993 budget for the Midwest Division be amended to $8,888; an increase of $1,888. On his further motion, seconded by Mr. Comstock, it was VOTED that the 1993 budget for the Delta Division be amended to $13,053; an increase of $3,553.

26. Mr. Kanode, as Chairman, presented the report of the Membership Services Committee. This Committee also had three meetings since the July Board meeting. Mr. Kanode called attention to three items. The success of the new Official Family Operating Event will depend on the "Official Family" and the Field Organization getting on the air to operate in the event, and on QSLing with the Official Family cards. A new DXCC fee schedule appeared in the December issue of QST. Further expansion of the DXCC Field Checking program should wait until the new DXCC computer system is in place. Similarly, additional forms of DXCC should also wait until the computer upgrades are on line.

27. Mr. Butler, as vice chairman, presented the report of the Volunteer Resources Committee. VRC held two meetings in the period, and Minutes have been issued. Chairman McConnell highlighted several items in the report. National Exam Day for 1993 was regarded as a success, and the Committee recommended a continuation. Accordingly, two such days have been scheduled for 1994, in May and October. The task of recruiting additional volunteer examiners for Alaska continues. Terms of reference for the ARRL education awards have been revised with three awards for 1994: the Herb S. Brier Instructor of the Year, the ARRL Professional Instructor of the Year, and the ARRL Professional Educator of the Year. A list of materials available to members has been compiled. The first Section Manager Motivation and Training seminar was well received; the Committee recommended its continuation. The Committee will offer two motions later in the meeting.

28. Mr. Metzger, as Chairman, presented the report of the Election Committee. Ballots stored at the auditing firm of KPMG Peat Marwick were delivered by van on Election Day November 19, 1993 accompanied by a member of the Committee and of KPMG Peat Marwick staff. Authorized personnel counted the ballots for the various divisions. The procedures followed,

personnel utilized and results are detailed in papers attached to the report. During the course of the above, at 11:31 AM, Mr. Stafford took the Chair for Mr. Wilson until 11:40.

29. Mr. Holladay, as Liaison, presented the report of the SAREX Working Group. Highlights: SAREX flies more missions and gets higher priority with NASA than any other secondary payload in the Shuttle program. Four crews took Amateur Radio equipment into orbit in 1993. On STS-57 in June, there was a dialog between President Clinton and astronauts Brian Duffy, N5WQW and Janice Voss in which the President expressed appreciation for the educational aspects (i.e., SAREX) of the mission. In April, there was ship-to-ship contact with the Russian Space Station, with Mike Foale, KB5UAC at the microphone. Also in April, antenna tests were run comparing the usual window antenna with the German SAFEX antenna in the open cargo bay; the latter was 10 to 12 dB better. The STS-58 mission was the most successful in terms of number of people reached, including 10,000 students in Pau, France observing a single horizon-to-horizon pass. The Working Group has drawn up guidelines to aid in school selection and to define SAREX priorities and requirements.

30. On motion of Mr. Severson, seconded by Mr. Mendelsohn, it was VOTED at 11:45 AM that the Board sit as a Committee of the Whole for the consideration of personnel matters. The Executive Vice President, the Chief Financial Officer and members of the assembly other than ARRL elected officials were invited to retire from the meeting. The Committee was in recess for luncheon from 12:05 to 1:45 PM. The Committee of the Whole arose and reported at 2:14 PM, and the excused members of the assembly returned to the meeting. On motion of Mr. Harrison, seconded by Mr. Mendelsohn, it was VOTED to accept the report of the Committee of the Whole. During the course of the above, Mr. Mark departed from the meeting. Mr. Stafford again took the Chair at 2:25 PM.

31. Mr. Quiat reported briefly for the Amateur Auxiliary Ad Hoc Committee in the absence of Chairman Turnbull. A new Amateur Auxiliary agreement with the FCC awaits the agency's final approval.

32. Mr. Frenaye, as Chairman, presented the report of the Ad Hoc Computer Committee. Its tasks were to analyze current computer usage at HQ, analyze current requirements, and make a preliminary report at the 1993 Second Meeting. Following that, the Committee in cooperation with the A & F Committee and the HQ staff, proposed capital budget items to replace older PCs with 80486- based PCs, to upgrade building wiring, and establish a reliable PC local area network. After this step is finished, several major software applications will have to be moved from the System 38 both because of its obsolescence and because it does not provide quick easy access to multiple users. A timetable was included in the report.

33. Mr. Olson, as Chairman, presented the interim report of the Ad Hoc 219 MHz Committee, established to outline a plan for orderly and efficient initiation of amateur operations in the 219-220 MHz band. The Committee anticipates that the band will be made available to amateurs on a secondary basis by FCC action sometime in the first half of 1994. On

motion of Mr. Olson, seconded by Mr. Heyn, it was VOTED that the Interim report of the ARRL Ad Hoc 219 MHz Committee is ADOPTED. The Committee members are thanked for their contribution to planning the future use of this very important addition to amateur spectrum allocations and they are asked to continue their work leading to a final report by July 1, 1994, or 45 days after the FCC issues a Report and Order for 219 MHz, whichever occurs first.

34. On further motion of Mr. Olson, seconded by Mr. Mendelsohn, it was VOTED that the 219-220 MHz band plan proposed by the Ad Hoc 219 MHz Committee is ADOPTED as an interim band plan as follows:

219-220 MHz Band Plan

Local Coordinating Bodies should coordinate this band such that ten 100-KHz Primary channels are created centered on the following frequencies:

Channel A 219.050
Channel B 219.150
Channel C 219.250
Channel D 219.350
Channel E 219.450
Channel F 219.550
Channel G 219.650
Channel H 219.750
Channel I 219.850
Channel J 219.950

Use of two of these channels in combination to achieve a full duplex environment is desirable.

Since the use of the band is for point-to-point fixed operation with a maximum of 50 watts PEP, and non-interference with Primary Users of the band is mandatory, highly directional antennas with horizontal polarization are recommended.

Because the plan for this band is use for inter-city links which can be assembled into a nationwide high-speed digital network, allocation of channels to point-to-point pairs running less than 56 Kilobits duplex should be discouraged. No matter what the bandwidth of the transmissions coordinated into a channel, they should be centered in the channel. The long term objective for digital transmission on these channels is 100 KHz bandwidth. Local Coordinating Bodies should seek to avoid decisions which will limit the nationwide network.

35. Mr. Mendelsohn, as Chairman, presented the interim report of the Ad Hoc Committee on Vanity Call Signs, formed in response to the FCC Notice of Proposed Rulemaking in PR Docket 93-305. The Committee's charge is to recommend a position on vanity call signs to the Board of Directors by mid- February. As much membership input as possible is to be sought. Based on input so far, the Committee suggests the vanity call sign system should be phased in with a series of four three-month windows before

opening the system to all. Previously held call signs regardless of license class, format or call district should be available first. The second, third and fourth windows would be by license class to Extra Class, then Advanced, and then General. At the end of one year, any licensed amateur would be eligible for any call within his call area and license class blocks, or a lower class block. The fee should be a one-time occurrence, and should be refunded if none of the call signs on the application are available. Calls should be held for two years after expiration or trade-in, and should not be transferable; these measures should help preclude "trafficking" in call signs. If necessary, an in-person meeting of committee members will take place February 12 in the Dallas-Fort Worth area.

36. At this point, 2:45 PM, Mr. Wilson returned to the Chair. Mr. Price, as Liaison, reported for the Biological Effects Committee; no formal report had been received from the chairman. The Board was in recess from 3:18 to 3:44 PM; Mr. Scupp took the seat for Mr. Quiat.

37. On motion of Mr. Severson, seconded by Mr. Burden, it was VOTED that the 1994-1995 Plan and Budget is adopted as presented to the Board by the Administration and Finance Committee.

38. Mr. Scupp, as Liaison, presented the report of the Public Relations Committee. Highlights: Tech Image replaced Selz Seabolt as the ARRL's PR firm, though many of the personnel involved are the same. ARRL's publicity efforts scored more than 100 major media hits and more than 25 major market television placements including an NBC story on SAREX and "Santa Ham" on CNN. The Associated Press picked up five stories, USA Today picked up two, and there were placements in at least 25 major metropolitan dailies. ARRL produced and began duplication of two public service announcements as reported by the Executive Vice President. With Steve Mansfield taking over the legislative function there will be a need for an additional PR person at HQ, to work under Steve's supervision. On motion of Mr. Severson, seconded by Mr. Scupp, it was VOTED that the Public Relations Committee Report is accepted. At this point, 3:49 PM, Mr. Quiat returned to his seat.

39. Mr. Stafford, as Chairman, presented the extensive report of the Long Range Planning Committee. The report summarized previous recommendations of the LRPC and actions taken by the ARRL as a result. The report set forth the assumptions made by the Committee, covered demographics, summarized interests of amateurs within the avocation, noted technologies which are emerging, touched on international and spectrum issues, predicted "The Regulatory Scene in the Year 2000" and closed with a vision of Amateur Radio and a summary of ARRL objectives. The LRPC recommends that a planning retreat be scheduled for the Board in the spring of 1994 to mull over these issues, without having to meet organizational constraints imposed by a formal Board Meeting.

40. Mrs. Brown, as Liaison, reported briefly on the work of the Digital Committee. The Committee is researching audio interface guidelines, and is preparing a proposed manual for HF Mailbox system operators, and

specifications for Amateur Radio BBS software, message routing, and signal level standards. At this point, 4:31 PM, Mr. Bodson took the seat for Mr. Kanode.

41. Mr. Bodson, as Liaison, presented the report of the Future Systems Committee. The Committee met in December and revised several earlier drafts. A paper on Technology Assumptions is Appendix A to the Report; Technology Assessments on imagery, advanced packet, digital signal processing, and digital voice communication comprise Appendices B through E. A final paper is entitled, "Getting There from Here." The Committee reviewed technology sections of the LRPC. Major changes in the industry including Internet, the Personal Communications Service and the National Information Infrastructure, are bound to have effects on future systems in Amateur Radio. The FSC also studied a report from a West Coast group conducting spread spectrum experiments under a Special Temporary Authorization. On motion of Mr. Bodson, seconded by Mr. Mendelsohn, it was VOTED that whereas, the FSC report suggests the development of a series of high profile awards for technical achievement, and

Whereas, the Long Range Planning Committee Report suggests the development of a system of awards for technical achievement,

Now, THEREFORE, an appropriate body such as the Volunteer Resources Committee is requested to study the feasibility of a system of technical awards ranging from home-brew/ design/construction projects to the creation of innovative communication systems, and develop appropriate criteria.

42. It was further moved by Mr. Bodson, seconded by Mr. Olson, that WHEREAS, the FCC granted Special Temporary Authority in April of 1992 for experimentation with certain spread spectrum communications, which STA was extended once, in May of 1993, for an additional one-year period; and

WHEREAS, the results of experiments undertaken pursuant to that STA have been positive, and have revealed that spread spectrum operation at VHF, properly done, is possible without interference to repeater inputs or other co-channel amateur operation; and

WHEREAS, Sections 97.305(c) and 97.311(c) and (d) of the amateur rules currently contain overly restrictive provisions regarding the use of spread spectrum techniques, which can be relaxed without interference to ongoing amateur operations at VHF and UHF frequencies;

NOW, THEREFORE, the Executive Vice President and General Counsel are directed to prepare and, after consultation with the Future Systems Committee, file a Petition for Rule Making, at the earliest opportunity, to amend Sections 97.305(c) and 97.311(c) and (d) of the amateur rules, to permit
spread spectrum operation on all amateur frequencies above 50 MHz, except those reserved for weak-signal operation in each amateur VHF and UHF band; and to eliminate the restrictions on spread spectrum emission types and the spreading sequence and tap setting restrictions currently

contained in Sections 97.311(c) and (d) of the rules. It was moved by Mr. Heyn, seconded by Mr. Severson, that the matter be postponed until the morrow, but the motion to postpone was LOST. The question then being on the main motion, the same was ADOPTED. Mr. Gordon requested to be recorded as voting nay. The Board was in recess from 5:17 PM to 8:30 PM, reconvening with all persons hereinbefore mentioned except Messrs. McCobb and Mark. At this point, Mr. Kanode returned to his seat.

43. Mr. Burden, as Chairman, presented the report of the Industry Advisory Council. The HQ staff prepared an interface specification for transverters which was reviewed by the IAC and released to the industry, receiving favorable response. The Council is working jointly with the Digital Committee on interface specifications for packet radio equipment. A comprehensive report on current League activities and programs for young people and schools was prepared by the Educational Activities Department of ARRL and released to the Council and answers concerns the industry has in this area. A proposal of the IAC for lifetime operator licenses has been adopted by the Board, and a Request for Rulemaking accordingly has been filed by General Counsel Imlay with the FCC.

44. Mr. Wyatt, as Liaison, presented the report of the Contest Advisory Committee. There have been two straw votes and two formal votes of the CAC since February, addressing some 50 items. One, adding a low-power category in the ARRL DX Test has been approved by the ARRL Awards Committee. The CAC is currently voting on bonus points for Class E stations in the ARRL Field Day, and is studying the VHF contest "rover" rules. The Committee is working on a five-year outlook for the ARRL contest program, as earlier requested by the Board. An outline is presented in the report and it is anticipated that the completed document will be ready for the 1994 Second Meeting of the Board.

45. Mr. Roderick, as Liaison, presented the report of the DX Advisory Committee. Since its last report, DXAC has recommended reinstatement of Eritrea to the DXCC Countries List; the recommendation has been accepted by the Awards Committee. Deletion of Mount Athos and addition of Pratas Island and the Turkish Republic of Northern Cyprus are under consideration. Proposals for DXCC rules changes rejected by DXAC include band- or mode-specific DXCC Honor Roll recognition, Rule 2 revision, and revision of the CW DXCC starting date. Additional DXCC awards and a Ten-Meter Honor Roll are under consideration. The DXAC recommended an RTTY DXCC Honor Roll, which has been accepted by the Awards Committee. The Committee is working on QSLing guidelines and studying call area calling by DX stations. Its projection of the DX world into the next 15 to 20 years is completed.

46. Mr. Goddard, as Liaison, presented the report of the Public Service Advisory Committee. The PSAC continues to study the matter of outgoing health and welfare traffic from disaster areas. It is also working on a new Public Service Communications Manual. The Committee will also review a National Disaster Medical System (NDMS) document and make recommendations about a possible Memorandum of Understanding between NDMS and ARRL.

47. Mr. Comstock, as Host Director, reported for the 1994 ARRL National Convention committee. The Convention will be held June 10 to 12, in Arlington, Texas.

48. At this point, the Chair announced committee appointments as follows: Administration and Finance: Directors Burden, Chairman; Comstock, Heyn, Metzger, and Olson, Vice President Price, Vice Director Roderick, and Treasurer McCobb. Membership Services: Directors Kanode, Chairman; Gordon, Mendelsohn, Quiat, and Severson, Vice President Stafford and Vice Director Brown. Volunteer Resources: Directors Turnbull, Chairman; Butler, Harrison, Lewis, and Wyatt, Vice President Frenaye and Vice Director Frahm. Election: Directors Turnbull, Chairman; Harrison and Gordon. Amateur Auxiliary Oversight: Directors Turnbull, Chairman; Quiat and Sitton. Ad Hoc Computer Committee: Vice President Frenaye, Chairman; Directors Olson and Mendelsohn, Vice Directors Rothberg and Race.

There were also changes in Chairmen and Liaisons to the following Committees: SAREX - Vice Director Goddard (liaison); Bioeffects - Vice Director Maxwell (liaison); Public Relations - Vice Director Gauzens (liaison); Long Range Planning - Vice President Holladay (chairman), Director Harrison (Board Rep); Digital - Vice Director Craigie (liaison); Future Systems - Vice Director Brakob (liaison), Vice Director Bodson (member); RFI Task Group - Vice Director Bodson (liaison); Spectrum - Vice Director Race (liaison); Contest Advisory - Mark Beckwith, WA6OTU (chairman), Vice Director Vydareny (liaison); DX Advisory - Vice Director Rothberg (liaison) and Public Service - Vice Director Huntington (liaison).

49. The Board was in recess from 9:02 PM until 8:30 AM on January 22, reconvening with all persons hereinbefore mentioned except Messrs. McCobb and Mark.

50. At this point the assembly reached Agenda Item 12, Directors' Motions.
On motion of Mr. Kanode, seconded by Mr.Harrison, it was VOTED that the West Virginia State ARRL Convention be held at Jackson's Mill, WV on July 2-3, 1994.

51. On motion of Mr. Harrison, seconded by Mr. Mendelsohn, it was VOTED that the Membership Services Committee is directed to review the United States 40 meter band plan for the purpose of proposing a possible relocation of the Novice segment to a lower portion of the band. This review shall take into consideration the effects on IARU band planning as well as the recent report and continuing study of the IARU Ad-Hoc Committee on 7 MHz. A report is to be made at the 1994 Second Meeting of the Board.

52. On motion of Mr. Mendelsohn, seconded by Mr. Butler, it was VOTED that the President, on behalf of ARRL, sign the revised statement of understanding with the American Red Cross.

53. On motion of Mr. Burden, seconded by Mr. Harrison, it was VOTED that the Business Manager is hereby authorized to reimburse division directors for actual expenses incurred by them during the year 1994 in the proper administration of ARRL affairs in their respective divisions and in

accordance with board policy up to the amounts as follows: Atlantic Division, $16,000; Central Division, $7,500; Dakota Division, $5,000; Delta Division, $11,500; Great Lakes Division, $13,500; Hudson Division, $10,000; Midwest Division, $10,000; New England Division, $10,500; Northwestern Division, $16,500; Pacific Division, $16,000; Roanoke Division, $11,500; Rocky
Mountain Division, $9,000; Southeastern Division, $13,500; Southwestern Division, $16,000; and West Gulf Division, $10,000.

54. On motion of Mrs. Lewis, seconded by Mr. Heyn, it was VOTED, at 8:43 AM, that the Board sit as a Committee of the Whole for the further consideration of personnel matters. The Committee of the Whole arose and reported at 9:00 AM. On motion of Mr. Quiat, seconded by Mr. Mendelsohn, it was VOTED to accept the report of the Committee of the Whole.

55. On motion of Mr. Severson, seconded by Mr. Mendelsohn, it was VOTED that the League Headquarters, as soon as practical, begin notifying members prior to license expiration, including an appropriate FCC renewal form.

56. It was moved by Mr. Mendelsohn, seconded by Mr. Heyn, that, the following resolution be adopted:

WHEREAS: Many ARRL members find themselves unable to finance the costs of defending themselves against nuisance lawsuits relating to Electronic interference and;

WHEREAS: The cost involved with defending antenna cases can easily exceed the ability of an individual to bear such burden, now therefore it is

RESOLVED: that the Administration and Finance Committee shall study the feasibility of offering group legal defense insurance to ARRL members to cover legal costs in antenna cases and RFI law suits.

On motion of Mr.Quiat, seconded by Mr. Kanode, it was VOTED to amend the motion by adding the phrase "including self-insurance" following "legal defense insurance." Whereupon, the question being on the motion as amended, the same was ADOPTED.

57. On motion of Mrs. Lewis, seconded by Mr. Butler, it was VOTED that newsletter editors of Affiliated Clubs be offered the opportunity to receive the ARRL Letter for one year at no cost.

58. The Board was in recess from 9:30 to 10:00. At this point, Mr. Frahm departed from the meeting.

59. It was moved by Mr. Wyatt, seconded by Mr.Burden, that the following resolution be adopted:
WHEREAS, at the 1992 Annual Meeting the Board requested all Advisory Committees provide on a timely basis a report forecasting the future of their respective functional areas, and

WHEREAS, to date, DXAC has provided its report and CAC has indicated that its report is in progress, now therefore

BE IT RESOLVED, 1) that DXAC be commended for its report; 2) that CAC be encouraged to continue its efforts; and 3) that all other committees be reminded of the requirement to provide their reports.

On motion of Mr.Severson, seconded by Mr. Harrison, it was VOTED that consideration of this matter is postponed until later in the meeting.

60. It was moved by Mr. Quiat, seconded by Mr. Butler, that the EC study and report by the Second 1994 Board Meeting concerning reducing to one per year the Meetings of the ARRL Board of Directors. But the motion was LOST.

61. On motion of Mr. Mendelsohn, seconded by Mr. Kanode, it was VOTED that the Secretary is instructed to cast an affirmative vote on IARU proposal No. 213 for the admission to membership in the IARU of the Ukrainian Amateur Radio League.

62. It was moved by Mr. Mendelsohn, seconded by Mr. Gordon, that the following resolution be adopted:

WHEREAS: ARRL is a leading publisher of Amateur Radio books and;

WHEREAS: The publishing business is undergoing a revolution as it moves from typesetting to desktop publishing, now therefore

BE IT RESOLVED that Headquarters staff move to investigate a multi-media production capability to keep pace with the changing technology in today's personal computing revolution.

On motion of Mr. Butler, seconded by Mr. Heyn, it was VOTED that the matter is referred to the Administration and Finance Committee.

63. On motion of Mr. Olson, seconded by Mr. Price, it was VOTED that the Secretary is instructed to cast affirmative votes on IARU proposals 214 and 215 for the re-election of the present IARU officers, President Richard L. Baldwin, W1RU, and Vice President Michael J. Owen, VK3KI.

64. At this point, 10:45 AM, Mr. Race took the seat for Mr. Severson and Mr. Goddard took the seat for Mr. Heyn.

65. On motion of Mr. Mendelsohn, seconded by Mr. Gordon, it was VOTED that the president shall appoint an Ad-Hoc committee to develop technical specifications for spread spectrum communications. Such specifications will minimize or preclude the potential for interference to narrowband users of the same VHF and UHF frequencies. These technical specifications shall include, but not be limited to, processing gain and the randomness of spreading codes. The Chair appointed Messrs. Bodson, Goddard and Rinaldo to this Ad Hoc committee.

66. It was moved by Mr. Mendelsohn, seconded by Mr. Olson, that lists of members, clubs and such information currently available as printed labels shall also be made available in standard data electronic format, on disk, to Directors, Vice-Directors and Section Managers as may be appropriate. Such list information shall conform to the rules set forth in the Articles of Association and By-laws.

It was moved by Mr. Severson, seconded by Mr. Butler, that the matter be referred to the Membership Services Committee. But the motion to refer was LOST. Whereupon, the question being on the motion as amended, the same was ADOPTED. During the course of the above, Messrs Heyn and Severson returned to their seats, and Mr. Rothberg took the seat for Mr. Burden.

67. On motion of Mr. Mendelsohn, seconded by Mr. Rothberg, it was VOTED that the VRC and FSD staff implement a program for electronic submission of Field Services appointments, cancellations and other Field Organization changes.

68. At this point, 11:17 AM, Mr. Burden returned to his seat.

69. On motion of Mr. Butler, seconded by Mr. Harrison, it was VOTED that the president is authorized and directed to investigate a site for the 1995 Annual Meeting of the Board of Directors. Said meeting to begin on the 3rd Friday of January, 1995. The Executive Committee, if it approves the proposed site, shall initiate a mail vote of the proposed meeting site. Approval of the site shall require an affirmative vote by a majority of the Directors. The mail vote shall be concluded not later than 60 days prior to the 1995 Annual Meeting.

70. At this point, Mr. Wyatt called for consideration of his postponed motion. On his motion, seconded by Mr. Mendelsohn, it was VOTED to amend the earlier motion to strike the text and substitute therefor the following:

WHEREAS, At the 1992 Annual Meeting the Board requested all Advisory Committees provide a report forecasting the future of their respective functional areas, and

WHEREAS, DXAC has provided an excellent report and CAC has indicated that its report is in progress, now therefore

BE IT RESOLVED, 1) that DXAC be commended for its report, and 2) that CAC be encouraged to continue its efforts.

Whereupon, the question being on the motion as amended, the same was ADOPTED.

71. On motion of Mr. Mendelsohn, seconded by Mr. Harrison, it was VOTED that the Business Manager is hereby authorized to reimburse the following committees and task groups created by the Board for expenses incurred by them during the year 1993 in the proper execution of their duties and in accordance with Board policy, as follows: Administration and Finance $10,000; Membership Services $10,000; Volunteer Resources $10,000; RFI Task Group $2,500; Bioeffects $2,000; Digital $6,000; Election $3,500; Public Relations $3,000; SAREX Working Group $6,000; Long Range Planning $10,000; Future Systems $4,500; Ad Hoc Amateur Auxiliary $6,000; Spectrum $3,000; Industry Advisory Council $5,000; Ad Hoc Committee on 219 MHz, $5,000 and the Ad Hoc Committee on Vanity Call Signs, $5,000.

72. On motion of Mr. Kanode, seconded by Mr. Butler, it was VOTED that, to continue the Board's policy of reimbursing QSL Bureau Managers of the League for certain travel in furthering ARRL organizational objectives, the Business Manager is hereby authorized to pay during the year 1993 a total amount not to exceed $4,000 under terms prescribed by the general pattern established by the Board.

73. On motion of Mr. Mendelsohn, seconded by Mr. Quiat, it was VOTED that, to continue the Board's policy of reimbursing National Traffic System officials above the Section level for certain approved expenses in furthering ARRL organizational objectives, the Business Manager is hereby authorized to pay during the year 1993 a total amount not to exceed $4,000 under terms prescribed by the Field Services Manager following the general pattern established by the Board.

74. On motion of Mr. Metzger, seconded by Mr. Kanode, it was VOTED that, to
continue the policy of the Board to assume the administrative expenses of the ARRL Foundation, the Business Manager is hereby authorized to pay during the year 1993 a total amount not to exceed $2,000 in accordance with ARRL standing policies with respect to travel, accounting procedures and auditing.

75. At this point, Mr. Stafford took the Chair for Mr. Wilson. On motion of
Mr. Wilson, seconded by the entire assembly:
WHEREAS on April 12, 1954, 25-year-old Perry F. Williams reported for work as an Assistant Secretary at the headquarters of The American Radio Relay League in West Hartford, Connecticut, and

WHEREAS his subsequent career on the ARRL professional staff has spanned 40 years, and

WHEREAS during that entire time Perry has served the members of the ARRL with devotion, and

WHEREAS his distinguished career included service as corporate Secretary, and

WHEREAS since 1980 he has been the League's most visible "man in Washington," representing the League with the integrity and dedication that has always been his personal trademark, and

WHEREAS Perry has announced his intention to retire from the ARRL staff in April 1994, and

WHEREAS he is the longest serving member of the ARRL staff presently in the League's employ, now therefore

BE IT RESOLVED by the Board of Directors of the American Radio Relay League, in Annual Meeting assembled, on this day, January 22, 1994, that the Board does hereby express its deepest appreciation and gratitude to Perry F. Williams, W1UED, for his many contributions to Amateur Radio and the League; and

BE IT FURTHER RESOLVED that the Board extends its warmest personal wishes for a long, enjoyable, and productive retirement. (Applause and standing ovation)

76. On motion of Mr. Mendelsohn, again seconded by the entire group, it was unanimously VOTED that the Board assembled in Annual Meeting at Rocky Hill, Connecticut on this 22nd day of January, 1994, thanks Lisa DeLude, Perry Williams, Rick Palm, Chuck Hutchinson, Steve Mansfield and Mark Wilson for their key support in making this Board Meeting a great success. (Applause).

77. At this point, an opportunity was given for every member of the assembly to offer comments. There being no further business, the Board adjourned sine die at 12:45 PM. (Time in session as a Board 9 hours and 28 minutes: as a Committee of the Whole: 1 hour and 6 minutes; total direct authorizations: $293,441.)

If you work 40 meter CW, with 5 watts or less, and use less than ideal antennas (no beams, dipoles or rhombics, etc), I would like to hear about your experiences. No...I'm not writing a book; I just want to know what I can expect before investing in a QRP station!

Many thanks & 73,
Andy, K4ADL

Pages 23-8 to 23-10 of the ARRL Antenna Book discuss this
for VHF. The RSGB Microwave Handbook volume I and the
VHF/UHF DX book also have useful information on coverage.

Actually, coverage area for an antenna is misleading--it
ignores the capability of the equipment and the effect
atmospheric conditions have on propagation.

For example, there are long line of sight paths that
might be too long for the free space range of simple
wide bandwidth microwave gear. On the other hand,
the coverage with 1500 watt transmitters and narrow
bandwidth sensitive receivers can be considerably
in excess of line of sight.

Matthew B Cravit (cravit@world.std.com) wrote:
: A friend of mine asked me this question, and I do not know the answer.
: If one has an antenna (say a vertical or something, as opposed to a

>I can expect before investing in a QRP station!

Hello Andy:

I am not sure what you mean by "less than ideal antenna" if you exclude
dipole. The dipole is the basic antenna for me, and I use QRP, mainly
SSB, sometimes CW, and almost always on 40 meters. Do you intend to
use a quarter wave vertical? A mobile whip?

It is really hard to predict what sort of experience you will have with
QRP from your QTH. Really hard. I have had a lot of luck, even with
a mobile whip on the car using QRP. You muse realistic, but also
know that things can happen with QRP that others just won't beleve.
I have worked a LOT of DX on 40 SSB with 5 watts and a dipole. A LOT.
But this is by patient working and late late nights and stalking guys
and things like that. Other times it has actually been easy. There are
even a few hams locally who run 100 watts with other dipoles and verticals
and on occasion, I get as good a signal report as they do, even when I
ask for a real one.

40 CW is really interesting. The antenna is the key, not really the power.
5 watts is plenty for most contacts under a lot of circumstances. My only
advice to you is to very carefully consider the sort of antenna you will
use. A good dipole, even shortened, up 20 feet or more should be fin.
A 50 foot long wire made of invisibly thin wire thrown into a tree or over
a roof will work fine also. Good luck.

Bob - most often it's the ARRL's Educational Activities
Department which coordinates the efforts of clubs and individuals
wishing to QSO with SAREX missions.

If you'd like, I'd be happy to forward any formal inquiry youy
(you) have to ARRL HQ's Educational Activities Department.

>haga@zach.fit.edu
^^^^^^^^^^^^ *!*

what the..?! did you take your test on-campus, larry, or some place else?
when i get home (only 2 blocks from the FIT campus), i'll dig through stuff
and see what i know...the FCC tape recording is saying 12 weeks at the
outside.

if you did take the test there at fit (November 20), call me -- 724-6183.
with a 10 week cycle it could be next week to almost the end of February (and
hamdom begins to sound like a Cap'n Crunch at the Campgrounds commercial
again).

SCATG needs some new contacts there on campus with the radio club now that
eric was graduated and brian apparently didn't come back (and that means we
need to change the sign in the window of WB4ABK again...)...and i see R. H.
infrequently at best. KI4TG and KB4KQF are both out of the FIT loop as well.

The 1994 Bike Ride Across Georgia, also known as B.R.A.G., is coming to South Georgia the week of June 11 through the 18th.

The ride starts in Bainbridge* and ends at St. Simons Island. It will pass through, Cairo, Thomasville*, Quitman, Valdosta*, Adel, Tifton*, Irwinville, Fitzgerald, Douglas*, Alma, Waycross, and Jesup*. The counties involved are Decatur, Grady, Brooks, Lowndes, Cook, Tift, Irwin, Ben Hill, Coffee, Bacon, Ware, Pierce, Wayne, and Glynn.

We are starting the planning and recruiting process for providing Amateur Radio communications for this event. Consequently, we need to make contact with various radio clubs, repeater operators, and individual operators in the area that would like to help support this event.

Interested parties can contact me by any of the following means:

Chuck Daley, KD4LXQ
10565 Willow Meadow Cir.
Alpharetta, GA 30202

(404)-475-8140
Compuserve: 73457,3114
Internet: chdaley@delphi.com

Please feel free to gateway this message to other networks.

I look forward to hearing from you....

Thanks,

Chuck

Andy,

Why do you want to "invest in a QRP station!" ??? Getting into QRP is
something you generally do AFTER you've become bored with the typical
"fivenineQSLQRZ" contacts.

If you are just studying for a ham ticket, I HIGHLY recommend NOT to get
involved with a QRP radio as a first choice. Others disagree with me
but they are in the minority.

So wazzup???

Right on. We have no clue whether or not this guy will stay straight. Wait
a minute, how do we know you will continue to be a good ham? We don't.
If we allow this kind of uncertainty about operators to exist, we
may end up with an unuseable service. I tell you, we should form a
'committee' to (eventually) question all the hams in this great service o'
ours and make sure they are on the up and up.

879. Boring WWV Programs

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-30 18:05:10 UTC
From: rc@cmr.ncsl.NIst.GOV
Message-ID: <9401301805.AA17277@cmr.ncsl.nist.gov>
Source record: 271686

There have been a number of negative comments expressed here concerning the boring consistency of WWV programming. Perhaps you all would be interested in what I will call the WWV Chant. Some friends and I came up with it way back when before WWV moved to Colorado. Unfortunately I can only remember a few lines ......

The WWV Chant

We're WWV
On standard frequency
We're on all day,
We're on all night.
Don't tell us we're wrong
We're always right.
....

We're experimenting with providing free public-access to our Informix database of FCC license information for radio transmitters located in California. The information should be accurate as of 09/30/93. More than 300,000 records are on file. Microwave, satellite, broadcast, and cellular records are included as well as business and public safety.

Telnet to: tcomeng.com
Login: fcc (no password)

VT-100 terminal terminal emulation is required. If there is enough interest, we will enhance the query interface and support other terminal types. You will need to carefully read the introduction in order to successfully use the database.

This service is provided in the public interest by Telecommunications Engineering Associates of South San Francisco, California. Send comments to fcc@tcomeng.com.

DOVE WATCHERS TO BE RECOGNIZED

HR AMSAT NEWS SERVICE BULLETIN 028.01 FROM AMSAT HQ
SILVER SPRING, MD JANUARY 29, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-028.01

DOVE (DO-17) Telemetry Watchers Will Be Recognized

This weekend the DOVE (DO-17) Command Team will begin using the DOVE text message frame to transmit the callsigns of everyone who has sent a DOVE reception report to Dr. Junior Torres De Castro (PY2BJO) of the Brazilian AMSAT Group, BRAMSAT, the owner of DOVE. Because of the limited length of that frame, about 15 calls will be sent at a time and the message will be changed about every 3 or 4 days. This is the DOVE Ground Command Team's way of thanking everyone who has sent in reports (several hundred at present). Special DOVE QSL cards will also be mailed to those who have reported DOVE reception to PY2BJO. We are particularly interested in hearing about the equipment used and the quality of the signals. We would also like to hear about the use of DOVE signals or data in education. Actual telemetry is not needed at this time.

Please send reports to:

Dr. Junior Torres De Castro (PY2BJO)
119 Macaubal
Sao Palo
Brazil 01254

[The AMSAT News Service would like to thank Jim White (WD0E) and the DOVE Command Team for this bulletin item.]

Antenna Polarization Sense Revisited By WD0E

There have been many discussions occurring on Compuserve's HAMNET forum and in various corners of the amateur radio community about the need for antenna polarity switching while using the OSCAR satellites. DOVE Command

Team member Jim White (WD0E) wants to add some futher comments about this important issue based on his years of experience working with the MICROSATs.

Case For Polarization Switching

"The following is based on design data, direct measurements and experimentation, surveys, and anecdotal evidence from discussion threads on the digital birds and Compuserve. I believe the empirical data is correct, but an error or two could certainly have crept in. I submit it for discussion and comment. The sense (right or left) of the circular polarization of the four original MICROSATs changes depending on the transmitter in use. There was no attempt to make a particular transmitter any sense. The way they came out was based on how the semi-rigid cable and components could be designed into the transmitter module. Here is a list of the sense of each one:

AO-16 RC 437.050 RHCP
AO-16 PSK 437.025 LHCP
DO-17 XMTR A 145.825 LHCP
DO-17 XMTR B 145.825 RHCP
WO-18 RC 437.100 RHCP
WO-18 PSK 437.075
LO-19 RC (&CW) 437.125 RHCP
LO-19 PSK 437.050 LHCP

The AO-16 PSK XMTR and the WO-18 PSK XMTR have problems and are not presently in use (although the AO-16 PSK transmitter - with LHCP - was used for about three years). We normally run XMTR B on DOVE because it is slightly more efficient. Last time I checked LO-19 was being switched occasionally between it's two. So it is strictly coincidence that three of these are RHCP virtually all the time. LO-19 changes. Problems with any of the xmtrs presently in use could result in a switch, which would change their downlinks to LHCP.

As long as you are receiving strong signals from these satellites, a miss-matched sense will not reduce the margin enough to cause missed data. However, if the signal is weak, because of a marginal receive arrangement or low power from the satellite, a miss-matched sense will cause significant loss of data. Uplinks are not a problem because they use monopoles and the receivers are very sensitive.

FO-20 is circular and has a fixed sense both up and down, but because of it's orbit geometry and motion, continuously good signals through it for an entire pass can only maintained if sense is switched, usually several times and on both uplink and downlink. This is particularly noticeable in the analog mode.

On AO-21, the 435 MHz receiving antenna, which is shared by the analog and digital modes, is a Helix with up to +3 db gain using Right Hand Circular Polarization. The 145 MHz transmitting antenna is a half-wave dipole. These antennas are always earth-pointing due to the satellite's gravity gradient attitude stabilization system. It is clear from a little exper-

imentation and from listening to the DSP FM repeat mode, that changing sense makes a significant difference in the overall link. At times, it is the difference between being heard and not. It changes during a pass. The UOSAT series use monopole antennas. I have never noticed a difference in link efficiency when sense is switched.

I have no data on which AO-26 transmitter has which sense. But this is a MICROSAT design, so changing transmitters will change sense. In it's first weeks of store and forward operation it was running very low power and incorrect sense made a large difference in received strength during most parts of most passes. If it continues to be necessary to run low power from this satellite, or if the LHCP transmitter is used, left hand sense will be necessary, and switching during a pass may be essential for efficient operation.

AO-27 (EYESAT) uses a monopole for the downlink so sense makes little difference when the amateur transmitter is on high power. However, when receiving very weak signals from it (exciter only), switching sense is necessary to be able to even detect the signal at times. It remains to be seen how much power this bird will be able to sustain on it's amateur (secondary) transmitter, so downlink sense could be an issue. Uplink is not an issue, as a monopole is used with very sensitive receivers.

UNAMSAT is built on a MICROSAT design. It's downlink sense may be left or right depending on which transmitter is used. Downlink power and sense will not be known until this bird is in orbit and becomes operational. During checkout it is likely both transmitters will be used at times, requiring sense switching. Tumbling during the first few days in orbit will almost certainly require switching. Downlink power *could* be somewhat lower than AO-16 and LO-19 because of the power necessary to run the meteor experiment transmitter. This situation would be similar to WO-18, which routinely runs at about half of the power of AO-16 and LO-19 because of the need to support the experiments.

VOXSAT will use monopole antennas, so the link polarization and sense needs may be similar to AO-21.

AO-13: Gain antennas are RHCP. When the satellite is at or near apogee and/or pointing angles are good, RHCP is always best. However, when there is significant off pointing or the omni's are in use, LHCP can often result in better uplink and downlink signals. LHCP can be better both in terms of more strength and reduced depth of spin modulation fade.

Stan Wood (WA4NFY) informs me that Phase-3D will use all RHCP for its circular antennas. Since it will be nadir pointing at all times, sense switching should not be necessary. This assumes all goes as planned, and we certainly hope it does!

I may have left out a bird or two, and have not hit all those being planned. Nor have I attempted to exhaustively document all situations or those of interest only to command stations. However, there are numerous situations in the foregoing where LHCP is necessary or favored.

Using the wrong sense will reduce efficiency and/or enjoyment. In a few cases it may make operation impossible. There is certainly much enjoyment available to a satellite enthusiast with fixed RHCP antennas (or even linear). But I hope I have shown that full utilization of our satellite resources requires switchable antenna circularity."

[The AMSAT News Service (ANS) would like to thank Jim White (WD0E) for this bulletin. If you would like to respond to Jim's thoughts on antenna polarization, he can be reached at his INTERNET address of: wd0e@amsat.org. Also, the ANS would like to thank DB2OS for the information about the AO-21 antennas.]

PHASE 3-D STATUS REPORT!

HR AMSAT NEWS SERVICE BULLETIN 028.03 FROM AMSAT HQ
SILVER SPRING, MD JANUARY 29, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-028.03

AMSAT-NA PHASE 3-D TEAM JOINS WITH FLORIDA-BASED ENGINEERING GROUP FOR SPACECRAFT INTEGRATION

About a half dozen members of the North American Phase 3-D Development team met recently to assess overall progress on the program and to begin planning for the spacecraft's final assembly in preparation for its April, 1996 launch from Korou, French Guyana.

Dick Jansson (WD4FAB), AMSAT VP for Engineering, hosted the North American Phase 3-D progress meeting near Orlando, Florida on 7-9 January, 1994, where a number of critical Phase 3-D issues were discussed. While several open items still must be resolved, AMSAT-NA's overall technical contributions to the Phase 3-D project remain on track.

"We're still on schedule for the 1996 launch," said Bill Tynan (W3XO), AMSAT-NA President. "I am really proud of the way everyone on the North American team is pulling together to insure our responsibilites to the international project are met", he said.

The high point of the meeting came when several officers of a Florida-based volunteer group, called Space Frontier Operations (SFO), presented their proposal to manage the overall integration effort for the Phase 3-D spacecraft. After extensive discussions concerning their capabilities and proposed integration approach, SFO's offer was greatfully accepted by Bill Tynan, Dick Jansson, and the rest of AMSAT-NA Phase 3-D team members present.

Space Frontier Operations is a relatively new group based in the Orlando/Cape Canaveral, Florida area. Presently, their membership stands at about one hundred. They are, however, a rapidly growing, not-for-profit, Florida corporation dedicated to the private, non-commercial, use of space. Their first project was a "Get-Away Special" (GAS Can)

experiment which will fly on an upcoming NASA Space Shuttle mission. Most SFO members are also connected professionally to NASA or other space agencies at the Cape. Together, they bring several decades of "hands on" experience designing and building a wide variety of government and commercial space hardware to the Phase 3-D integration effort.

"We are very honored to be associated with such a prestigious group as AMSAT", said Andy Clark, SFO's Chief Executive Officer at the recent Orlando meeting. He went on to note, "We believe our professional aerospace experience will bring another, very positive dimension to an already outstanding international Phase 3-D team." These same feelings were echoed by Mike Peacock (KR4GA), SFO's Director of Engineering, who stated that because SFO and AMSAT share many of the same goals, the partnership should prove mutually benefical.

Also on hand for the meeting were Keith Baker (KB1SF), AMSAT VP, Strategic Planning, who discussed the overall Phase 3-D Master Schedule. In addition, Stan Wood (WA4NFY), udpated the team on Phase 3-D's various antenna designs. Dick Daniels (W4PUJ), AMSAT's North American P3-D Team Director along with Dr. Tom Clark (W3IWI), P-3D GPS experiment Team Leader, joined the group by telephone. Longtime AMSAT satellite builder Jan King, W3GEY, and Lyle Johnson (WA7GXD), from TAPR, were also present and served as technical advisors to both teams during the discussions.

Final designs for solar cells, solar panels, batteries, as well as the progress now being made on the spacecraft's overall structure were also discussed. In addition, possible integration sites in the Orlando/Cape Canaveral area were evaluated and several team members toured a candidate facility at the Orlando International Airport. A final selection regarding the most cost-effective location for Phase 3-D integration will be made once firm rental price proposals are received and evaluated by the now AMSAT-NA/SFO combined Phase 3-D integration team.

[The AMSAT News Service would like to thank Keith Baker (KB1SF) for this bulletin item. Keith can be reached at his Compuserve address of 75070,331.]

BID: $ANS-028.06

KITSAT-OSCAR-25 Begins Bulletin Board Operations (BBS) 01-FEB-94

KO-25 will open its BBS service beginning on 01-FEB-94. Many discussions are going on about KO-25 services. Thank you for your cooperation so far by keeping your transmitters silent on the KO-25 uplink frequencies so that we could complete our experiments with KO-25. KO-25 will operate in normal mode, 9600 baud FSK using the usual set-up for any of the 9600 baud OSCARS, e.g., KO-23, UO-22, or PoSAT. You will, therefore, not have to make any changes to your station to use KO-25.

Since not all the on board experiments are not finished yet on KO-25, there will be, at times some interruptions of service. But, SaTReC has decided to open the service because the remaining experiments will not cause any serious problems with the KO-25 BBS service.

"We hope you enjoy our new star in space," says Hyungshin Kim of the Korean Institute of Advanced Space Technology.

AO-13 ZRO TEST SCHEDULES!

HR AMSAT NEWS SERVICE BULLETIN 028.07 FROM AMSAT HQ
SILVER SPRING, MD JANUARY 29, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-028.07

AO-13 ZRO Tests Begin For '94

AMSAT-OSCAR-13

ZRO TEST SCHEDULE

FEBRUARY-MARCH 1994

The ZRO Memorial Technical Achievement Award Program, or just "ZRO Test" has a new schedule for February and March, 1994, via AMSAT-OSCAR-13. This activity is a test of operating skill and equipment performance.

During a typical ZRO run, a control station will send numeric code groups using CW at 10 words-per-minute. At the beginning of the run, uplink power from the control station is set to match the general beacon downlink strength. This is level "zero". The control operator will send and repeat a random five-digit number, then lower his uplink power by 3 dB (half power) and repeat the procedure with a new random number (level "1"). This will continue to a level 30 dB below the beacon (level "A").

A participating listener monitors the downlink signals until he or she can no longer copy the numbers. Those who can hear the beacon will qualify for the basic award by copying the code group heard at level "zero". The challenge is to improve home-station performance to a point where the lower-level downlink signals can be copied (levels 6 through A). To date, only one station, Darrel Emerson (AA7FV), has successfully copied level "A".

The following schedule of Mode "B" tests were chosen for convenient operating times and favorable squint angles. The tests can be heard on 145.840 MHz. Andy WA5ZIB will conduct all the tests. Mode "JL" tests will no longer occur due to the failure of AO-13's 70-cm transmitter.

Day Date (UTC) Time Areas covered

Saturday Feb. 12, 1994 2345 UTC NA, SA, Europe, W. Africa
Sunday Feb. 20, 1994 0330 UTC NA, NW SA, Japan, Pacific
Saturday Feb. 26, 1994 1930 UTC NA, SA, Europe, Africa, ME
Saturday Mar. 19, 1994 1930 UTC NA, SA, Europe, Africa
Saturday Mar. 26, 1994 2315 UTC NA, SA

Note that the dates and days are shown in "UTC", thus the second test occurs at 9:30 PM CST Saturday night (the 19th). Any changes will be announced as soon as possible via the AMSAT HF and AO-13 Operations Nets.

All listener reports with date of test and numbers copied should be sent to Andy MacAllister WA5ZIB, AMSAT V.P. User Operations, 14714 Knights Way Drive, Houston, TX 77083-5640. A report will be returned verifying the level of accurate reception. An S.A.S.E. is appreciated but not required.

Information about the AMSAT Awards Program can be found on page 197 of the "Proceedings of the AMSAT-NA Tenth Space Symposium" (1992). This paper, covering all the AMSAT-NA awards including specifics on the ZRO Test, was reprinted on page 10 in the March/April 1993 issue of "The AMSAT Journal". The ZRO Test information provided in the article covers test procedures, means for obtaining certificates and gives some historical background about the program. Reprints of the article can be obtained for an S.A.S.E. to WA5ZIB at the address above.

HR AMSAT NEWS SERVICE BULLETIN 028.08 FROM AMSAT HQ
SILVER SPRING, MD JANUARY 29, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-028.08

Happy Birthday AMSAT-OSCAR-21!

On 29-JAN-91 the first international Orbiting Satellite Carrying Amateur Radio (OSCAR) in which radio amateurs from the former Soviet Union (CIS) worked together with radio amateurs from Germany was successfully launched.

The official name of the project was RM1, which stands for "RADIO M-1". The digital transponder RUDAK-2 is part of RM1.

After the launch from the Northern Cosmodrome in Plesetsk, Russia, the satellite was named as AMSAT-OSCAR-21, to emphasize that the spacecraft was built by, and for, Radio Amateurs around the world.

AMSAT OSCAR-21 was attached as a secondary payload (Piggy-back) aboard the CIS geological research satellite "INFORMATOR-1".

AMSAT-OSCAR-21 (also known as RS-14) is a joint project between AMSAT-U in Russia and AMSAT-DL in Germany.

[The AMSAT News Service (ANS) would like to thank DB2OS for this bulletin item.]

883. Anyone have cct diagram for HP2160A PSU pse ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-30 20:53:55 UTC
From: I.A.CAmeron@open.ac.UK
Message-ID: <199401302054.MAA15721@ucsd.edu>
Source record: 271693

Hello all,

I have here two HP2160A power supplies, which I would like
to convert for 13.8V use. Unfortunately, there are no pots
in the thing that can be conveniently twiddled ! The PSU
has some sort of interface card on it, although I have no
information on it but it would seem likely that it's for
remote voltage (current ?) control and switching, and the card
also has the regulation circuitry on it as well.
I have two options, either modify the interface card, but I'd
need a circuit diagram, or use the main hardware like the
transformer and smoothing capacitors and build my own
regulation circuit. Although I'd quite like a circuit diagram
to do the second option, as the transformer has multiple
tappings on it, and I'd quite like the data on it.
The only thing I do know about this power supply is that it was
for some sort of medical equipment. I found this out from HP UK,
but they couldn't provide a circuit diagram and told me the
things were obsolete !

Theres some back panel information, as follows:

SER # 817-00434
MODEL # 2160A
OPTION # 15
SYSTEM SERIAL NO. 0986B

Plus, the units were made in the USA !

If anyone could supply me with a circuit diagram for these PSU's
I'd be very grateful.

Cheers for any help and 73 Ian G0TLB

Please reply to: i.a.cameron@open.ac.uk - As I don't subscribe to
info-hams anymore as I can't make the time to read it all !

>perfect?

Mark's problem is having had to deal with VE6MAV for too long. The "MAVerick"
has left a legacy with a *very* bitter aftertaste.

Still, it's no reason to pre-judge people.

--lyndon (who dealt with VE6MAV by moving out of the province :-)

887. Re: Ramsey FX Transceivers

Message-ID: <2ihf4a$i4i@unbc.edu>
Source record: 271702

greg@netcom.com (Greg Bullough) writes:

>They are also required to own a spectrum analyzer, or to know where
>to get access to one.

Then there *is* hope :-)

>And of course, our no-code techs understand clearly that they can't
>trust a manufacturer to produce a design that won't get them in
>trouble.

Trust is not at issue. The reg's *require* that any transmitter you operate meet certain spectral purity requirements. The onus is on *you* as the license holder to ensure that those requirements are met. It doesn't matter *how* you meet the requirements, only that you *meet* the requirements. This applies to all transmitters you operate, regardless of whether they are commercial or homebrew.

>Gee, Lyndon, I'm overwhelmed by your sympathy for a kid who
>sees an inexpensive VHF/UHF rig and puts it on the air.

I'm glad to hear it. Having entered the hobby at a young age, commercial gear was something I simply could not afford. Kits were (and are) a viable alternative to expensive commercial gear. By building the kit that "kid" will come out knowing more about transmitters than the majority of the total ham community. Why is this bad? (Want an example of appliance operators? One of our local "packet experts" was most surprised recently to discover that digipeating a packet meant transmitting it *twice* over the air.)

--lyndon

>is de-sensed by anything transmitting below 440MHz.

I too have a pile of modified commercial gear that I use. I can tell you horror stories about some of *those* rigs, too. As for desense on the FX-440, can't that be solved with an outboard bandpass filter?

>Well, I've pointed out three radios that are far superior to the
>Ramsey FX-146, and I bought all of them for under the cost of one
>Ramsey FX-146 and cabinet.

Yup, me too. Sometimes, though, it's tough to find surplus commercial gear. And some of that gear requires a microscope and tweezers to work on. In both cases, the FX kits are a viable alternative.

>The method to generate useful SS is either by DDS frequency hopping
>or I/Q modulated carrier. PLL approach to SS is doomed to relatively
>few hops/second and/or considerable "bounce" in the desired frequency.

Who said anything about *useful* ? I said I want to *experiment*. Maybe I want to find these things out myself? If I wanted commercial grade SS I'd buy a pair of WaveLAN boards.

>>It's a shame that the Amateur Experimental Service has turned into the
>>Amateur Appliance Service.

>It is a shame amateurs won't take advantage of readily available
>high-quality surplus to use as a platform for experimentation and spend
>considerable effort defending junk radios that don't even come up to the
>performance standards of a Part 15 cordlesst telephone. :-)

Ya, but you just backed up my point - it's not an experimental service any more ...

889. Hams With Pacemakers

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-31 00:21:43 UTC
From: pauld@fs1.ece.cmu.edu
Message-ID: <2ihiun$aat@fs7.ece.cmu.edu>
Source record: 271712

I would like to get in touch with active hams (HF or VHF) who have
a pacemaker. My father just received an on-demand type pacemaker, and
I am concerned about operating radio gear and the rfi that it might
cause to the pacemaker. I operate 2-meters with 25 watts, and the
HF bands with 100 watts. If you are an active ham and currently wear
a pacemaker, please reply to:

pauld@fs1.ece.cmu.edu (internet)
WA3TLD @ K3OIW.#WPA.PA.USA.NA (packet)

If you would rather discuss it on the phone, please send me your number
and I will call you at your convience.

Thanks for your help

Paul

890. Voice of America News Now Available on Internet

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-31 00:24:13 UTC
From: ck@VOA.GOV
Message-ID: <CKGx4E.ILF@VOA.GOV>
Source record: 271692
Cross-posted to: comp.infosystems,comp.infosystems.gopher,rec.radio.amateur.misc,rec.radio.shortwave,rec.video.satellite

The Voice of America's international News and English Broadcasts radio newswire is now available via anonymous FTP and the Internet Gopher, along with a variety of other information from VOA and Worldnet Television.

The News and English Broadcasts wire service includes the texts, in English, of radio reports prepared by VOA staff correspondents, contract news reporters ("stringers"), and feature and documentary writers. The wire provides a comprehensive daily report of news events, worldwide. It is one of the core news products of the Voice of America, and is used as the basis for much of VOA's programming in all languages. The public Internet server is updated within a few minutes of the issuance of each report by the VOA central news department; a seven-day archive of the wire is available on the public server.

In accordance with U.S. law, program materials such as the News and English Broadcasts newswire are provided exclusively for recipients outside the United States.

Selected VOA and Worldnet program schedules, shortwave radio frequency and satellite downlink information, public announcements from the Voice of America and Worldnet, and technical documents on international radio and television broadcasting are also available on the public Internet server.

All the materials on the server are available by anonymous FTP and the Internet Gopher. Schedules and other general information materials may also be requested via electronic mail; the News and English Broadcasts newswire is not available via email because its contents change so rapidly.

The Voice of America and Worldnet are, respectively, the international radio and television networks of the United States Information Agency, and operate out of headquarters in Washington, D.C. VOA has news bureaus in many major world cities.

NOTES OF INTEREST
PETER I Is. 3Y0PI. The DX'Pedition team is proceeding on schedule with an expected landing date on the island of February 1st.

PACIFIC TOUR. Nob, JF2MBF and Yasu, JI1NJC will make a trip which includes Tonga (A35JJ) from Feb. 12 to 20, Tuvalu (T23JJ) from Feb. 22 to March 1st, West Kiribati (T30JJ) from March 3 to 8th, Nauru (C21/W3KD) from March 9 to 14. Activity will be on all bands and

modes. QSL direct via JF2MBF or JR2KDN via bureau.

S.M.O.M. 1A0KM. After three years a group of operators will be on from Jan. 26 to 31 on CW/SSB and RTTY on all bands but no 160. QSL via I0IJ. (No report on the Cluster anyway up to now).

MOUNT ATHOS. Monk Apollo has been quite active recently on 20, 80 and 40 SSB. Keep fingers crossed for a return also to RTTY.

Send your bandpass and notes for next week to Bob,
WB2CJL @ W5KSI.#NOLA.LA.USA.NA or WB2CJL @ ZS5S.ZAF.AF.

The following is a QST

The ARRL files against an instant ham radio ticket and the Red Cross asks hams for help.

*****
ARRL FILES AGAINST INSTANT LICENSE

The ARRL said that it would challenge any move toward the creation of an instant ham radio license and it has now put its words on paper and sent them off to the FCC. This, in comments opposing the commission generated proposal to grant immediate on the air privileges to amateur examinees before a license is issued by the Commission.

The League says that it stands by its previous statement in opposition to a petition for rule making that resulted in the FCC's proposal, in PR Docket 93-267. At that time, the ARRL said in response to a petition by the Western Carolina Amateur Radio Society VEC that such a system was both unlawful and a would be detrimental to enforcement. The League said that the FCC had, as recently as 1987, denied such a concept and that the absence of an up to date database of such temporary call signs would make both self regulation by amateurs themselves and rules enforcement by the Commission more difficult.

The League now says that suggestions in the NPRM that precedents for such a plan exist in other services are incorrect and has reiterated its opinion that such a plan is inconsistent with the international radio regulations. Instead, the ARRL has emphasized that electronic filing of applications with the FCC would accomplish the same goal. This, of reducing the wait to get on the air, while maintaining total FCC oversight of licensing.

As we've reported, AMSAT North America is in full agreement with the ARRL but the rival National Amateur Radio Association, many VEC's and several prominent radio clubs have gone on the record of favoring an instant licensing plan. NARA and a number of radio clubs say that in lieu of self assigned call signs, each VEC should have a previously assigned block of calls that it can issue on the spot. Most of those in favor of instant licensing are however demanding that the FCC include better safeguards against bootlegging than are in the original commission proposal. The reply comment cutoff date for this proposal is February 10th. Look for a decision on this one fairly early.

*****

ARRL BOARD MEETING HELD RECENTLY

A frigid Hartford, Connecticut was the scene for this years first annual meeting of 1994 for the ARRL's Board of Directors. The temperature was below freezing outside, but not so in the meeting hall itself.

Board members spent their meeting covering a variety of topics affecting amateur radio. A League committee will look into the possibility of offering group legal defense insurance to league members involved in lawsuits over antennas and rfi. The league wants to loosen some of the rules governing spread spectrum techniques. In fact the ARRL says it will file a petition for rulemaking seeking to remove overly restrictive rules concerning the use of spread spectrum communications. Board members adopted an interim report and band plan recommendation for amateur use 219 to 220 Mhz. That one mhz slice has been proposed for limited amateur use including packet communications. And the first steps may be starting to change the 40m novice subband. A League committee will consider possibly relocating that band. The committees report is due in July. You will be getting a reminder

from League when your license is about to expire. That new practice will also include sending a 610 form to help encourage amateur radio license renewal.
A lot of what the ARRL board decided last week will definitely affect your day to day ham radio operations for years to come.

*****
LEAGUE AT THE NAT

The ARRL is inviting Broadcast professionals and others to visit its booth at the annual convention of the National Association of Broadcasters, to be held March 21st through the 24th at the Las Vegas Convention Center in Las Vegas, Nevada. The booth, manned by ARRL Public Information Manager Steve Mansfield, N1MZA, has in past years attracted several hundred amateurs and former amateurs. Steve will be on hand to field questions from those in broadcasting who are interested in Amateur Radio. The League will be in Booth number is 2703.

*****
RED CROSS NEEDS HAMS

In the wake of the January 17th Northridge earthquake, the Los Angeles chapter of the Red Cross says that it is in very desperate need of hams to provide help on weekdays and weekday evenings filling shifts in its quake relief shelters. Weekdays pose a real problem for the Red Cross as many of their volunteers have regular jobs. If you are coming to Los Angeles, have a two meter hand-held and have at least six free hours, please call Jim Prince at area code (213) 739-4510. This Red Cross says that this work is vital to those made homeless by the recent quakes, so please consider donating some time.

*****
WESTLINK REPORT NEWSLETTER ISSUE DELAYED

The Northridge earthquake has taken yet another toll. This, in the ability of a popular ham radio newsletter to get its next edition in the mail.
If you are a subscriber to the Westlink Report ham radio newsletter, you may be wondering where edition number 665 is. While it is true that Publisher Burt Hicks, WB6MQV is looking to sell the publication, that's not the reason for the delay in your getting the latest work. Hicks says that last weeks California earthquake is to blame.

"While I was sitting at the keyboard at 4:30 in the morning when the quake hit. It's only by the grace of God that I wasn't killed as things came flying off the tops of bookcases and speaker shelving. The computer was hit and sent flying. It took me a couple of days to find it after unburying it. Yes, the issue will come out. But, it is going to be a couple of weeks.

My apologies to our readers." Burt Hicks, WB6MQV, Editor of Westlink Report.

While we had Burt on the phone we also asked why he has decided to bow out of the ham radio publishing arena after fourteen years.

"It has become quite a burden on us with my work schedule shift at a Hollywood TV station. I work all night five days a week. Then I have four children to keep me awake the rest of the time. It's becoming increasingly difficult, I don't know maybe it is just old age. I still love the newsletter, but at a certain point your body can only handle so much." Burt Hicks, WB6MQV, Editor of the Westlink Report.

Hicks says that he plans to continue publishing the Westlink Report until a suitable buyer comes along. He says that he will only sell out to an individual or group that promises to uphold the same commitment to moral and journalistic integrity started by his predecessor Joe Schroeder, W9JUV, in his HR Report. Hicks adds that the next edition will soon be in the mail.

*****
THIS WEEK IN AMATEUR RADIO UPDATE

A quick correction. A few weeks ago we reported on the return of This Week in Amateur Radio to the satellite bands. Unfortunately we got the transponder wrong. This Week in Amateur Radio can be found on Galaxy 3 Transponder 17 with 5.8 MHz audio, not on Transponder 19 as reported.

*****
NO DAYTON BUSSES

If you are planning to attend the 1994 Dayton Hamvention, better plan to drive your car out to the Hara Arena convention venue. This is because Hamvention planners have announced that they will not be providing free bus service to hotels and motels this year.
The problem is simply one of cost. Dayton first began providing the free bus service after land adjacent to the Hara Arena was made off limits for parking. Over the years, the cost of providing the free bus service has soared until it topped the ninety thousand dollar mark. That's simply more than the Hamvention can afford to pay.
But over the past twelve months, much of the old parking adjacent to the Hara Arena became available once again. Its now privately owned, so there will be a nominal daily charge to be decided by the owner of each lot.
Getting the parking spaces back means that the Hamvention can cut back this expensive transport service, Now it needs to provide shuttles only to outlying parking facilities such as the

Salem Mall. According to Hamvention General Chairman Dave Grubb, KC8CF, this will be a savings of over forty-five thousand dollars. Money that can better be spent on improving other aspects of this yearly event.
Grubb adds that the Hamvention Planning Committee is also working with the Dayton Chamber of Commerce and the city's Convention and Visitors bureau. This, to see if either will help to underwrite the cost of running busses from the various hotels. In lieu of that, the Hamvention is also trying to get the hotels and motels to provide this service for their guests.
The bottom line is that a few out of town visitors who fly to Dayton for the Hamvention may be inconvenienced by this change, but the enhanced on-site parking may make things a lot easier for the vast majority of Hamvention attendees who drive.

*****
TAPR MEETING

Tucson Amateur Packet Radio better known as TAPR has scheduled its annual meeting for March 4th to 6th at the Best Western Inn at the Airport in Tucson. The meeting will feature presentations and papers on several new hardware projects, discussions, and hands-on demonstrations. The afternoon session on Saturday will feature a mini-symposium on future directions in amateur packet radio. For more information contact Program Chairman Keith Justice, KF7TP, at (602) 461-8687, or contact TAPR at 8987-309 East Tanque Verde Road, Unit Number 337, Tucson, Arizona 85749. Their voice mail system number is (817) 383-0000 and the fax line is (817) 566-2544.

*****
QSL STATISTICS

In DX, the ARRL says that its members in 1993 sent about 7 and a quarter tons of QSL cards to the ARRL Outgoing QSL Bureau, and the Bureau shipped them out. This was a total 2,182,000 cards for DX destinations.
The US Incoming QSL Bureau's volunteers sorted just over two million cards in 1993, as well.

*****
QSL ROMEO

Cards for the 9D0RR operation should be sent to Edward Kritsky, Box 715, Brooklyn, New York 11230. The former address of Box 776 belongs to Romeo Stepaneko and is now being used only for his personal business. The change applies only to 9D0RR cards. All other cards for Romeo still go to the Box 766 address.

*****
VIDEO WINNER

Emmy award winning producer Rich Moseson, NW2L has won yet
another honor. The ARRL reports that his video titled Ham
Radio Horizons was a finalist in the New York Festivals
International Non-Broadcast Media competition for 1993. The
awards were presented January 14th in New York City.
The 49-minute program introducing non-hams to Amateur Radio is
part of the CQ Communications video library, which also includes
videos on satellite operation, DXing, contests, and packet radio.
Executive producer Rich Moseson is also ARRL Section Manager for
Northern New Jersey.

>Clark
>WA3JPG

5 watts really can be a lot of power. I've been building a rig based on
rick Campbell's R2 receiver (jan. 1993 QST). I really wasn't so much
interested in QRP as in the pride of homebrew, but along the way I was
surprised to have lots of nice ragchews where I expected to be fighting
for a decent report. Daytime ragchews with the retired old timers have
been best -- good luck at night also, but folks don't want to ragchew.
I'm feeding a horizontal loop cut for 80 meters -- the more wire the
better, as a general rule!

I will probably still build a 100 watt or so amplifier somewhere along the
way, but it will now be used only when truly needed!

896. Online Repeater Database Helper Program

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-31 02:09:23 UTC
From: au156@yfn.ysu.edu
Message-ID: <2ihp8j$ea9@news.ysu.edu>
Source record: 271717

I have written a program to make it easier to enter data into
the Online Repeater Database devised and managed by Conway Yee
(yee@mipg.upenn.edu). He is looking for volunteers to enter
the information available publicly from several sources.

If you are right now, or were seriously contemplating doing
some of this work, and are interested, you may email me about
the program. I would like to have a few people try it out. If
it seems appropriate, it might be possible to have it available
by ftp somewhere. For the moment, copies will be distributed
by uuencode.

What follows is an excerpt from Conway's last message about the
status of the project. (SInce this message, I've done MA and OR
with 1991 data.) :

This version 0.02 (last updated 19940120) of an online repeater
directory which currently contains over 1800 entries. All previous
versions are obsolete.

There are entries for AK, CT, DC, DE, HI, ID, KY, ME, MT, NC, ND,
NH, NJ, NV, NY, PA, RI, SD, UT, VT, WV, WY. Since the last time
this data base was posted, I have added one state and two
volunteers have added four more.

Thus far, people have volunteered for
1) AZ
2) KY, MS, SC, TN, VI, WV, GA (two states already done
but the current data will be replaced with up to date
information).
If everybody follows through with their intentions, we will
soon have over half the United States accounted for.

This file with all the data is be available for anonymous ftp as
mipg.upenn.edu:/pub/yee/rptr002.Z

: Thanks,
: Lee.

: (If Jesus is coming, think he'll QSL? Wonder who his QSL manager'll
: be..?)

I believe you are thinking of a store that used to be in Leesburg, VA.
They closed about a year ago. Sold most of their stuff to G and G
Electronics in Gathersburg, MD. (phone 301-258-7373). I heard the owner
of the Leesburg store may still be doing some business from his home.
You might call G&G for more info, or G&G might have what you need, the
store looks like one fine junkbox.

>: Does anyone know where I could get more info on GMRS (general mobile
>: radio service).

Frank,
The best source of info re: GMRS, by far, is: Personal Radio Steering Group
they are at: P.O. Box 2851, Ann Arbor Mich 48106, Voice (313)-MOBILE3, and
have a BBS at (313)-995-2100.

P.R.S.G. membership is very reasoanble, and will provide you with more
information on GMRS than you'll ever want or need. Additionally, they will
supply
the necessary application forms from FCC as well as information as to how to
complete them.

When I got my GMRS license, it was $35. Forms are also available
from FCC, General Mobile Radio Service,
PO Box 358230, Pittsburgh, PA 15251-5230
ask for FCC FORM 574.

Hope this helps.

PS. Iv'e not seen a GMRS FAQ on internet.

Good Luck,

Thom Forbes (N2CBV)

Last-modified: $Date: 1994/01/02 22:00 $
Version: $Revision: 1.06 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with
```

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

900. Ham Radio FTP area on World

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-31 04:00:07 UTC
From: wy1z@netcom.com
Message-ID: <rec.radio.info-ham.radio.ftp_759988806@ve6mgs.ampr.ab.ca>
Source record: 271732
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info,rec.radio.scanner

This is a periodic reminder that the Boston Amateur Radio Club maintains an FTP area on world.std.com (192.74.137.5) in pub/hamradio.

This area is accessible via: anonymous ftp, gopher, and World Wide Web (and possibly other methods I'm not yet aware of). World is not *fsp*-able yet (I asked them).

Via Gopher, the easiest path to the area is by selecting the following from World's main menu:

18. Membership and Professional Associations

3. Boston Amateur Radio Club

And go from there...

Please feel free to browse through the area.

If anyone has any questions about it, please do not hesitate to e-mail me.

Also, up-to-date copies of the files on the ARRL's information server (info@arrl.org) are available in the directory pub/hamradio/ARRL/Server-files.

All text files are uncompressed, so they are both retrievable and viewable via Gopher and World Wide Web. (If you have any troubles with any text file, please e-mail me).

Source code for programs is always welcome. It can permit people to use those programs on other computers with other operating systems.

Scott

901. Re: Yaesu FT-890AT

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-31 04:09:06 UTC
From: Thom Forbes <forbest@delphi.com>
Message-ID: <19940130.23090691.forbest@delphi.com>
Source record: 271683

Hi Doug,

I've been using the FT-890 for over a year now, and
love it. Like yourself, I spent considerable time investigating
the price/benefit of the competitors. I purchased my rig
primarily for use while camping. I've used it very sucessfully
with just a long wire up in the trees. The optional antenna
tuner is well worth the investment. CW performance is superb,
and I've work plenty of DX on SSB. The FT-890 is now my
promary rig.

The optional CW and SSB filters make a small improvment,
but frankly I think a good DSP Digital audio filter would be
a much better investment.

On the down side, I've been less than thrilled with RTTY
performance, owing probably to the already narrow passband of the
SSB filter. There is no provision for a RTTY passband IF filter
as found on many other transceivers, and while Yaesu describes
RTTY/PACKET operation in their FT-890 manual, I'ld be a lot happier
to have an IF filter better taylored to the wider shift/bandwidth
of these modes.

helpful.

RAC Forum Questionnaire

The First National Convention of Radio Amateurs of Canada will provide an excellent opportunity for amateurs to meet face to face with the directors of RAC and discuss issues that will help to shape the direction of amateur radio in Canada. This questionnaire is designed to help the RAC directors get a feel for the basic issues. The RAC Forum will provide the opportunity for these and other issues from the floor to be addressed as well.

Please check the appropriate line to signify your assessment of RAC's handling of the listed issues. Space is also provided if you wish to make any specific comments. For any additional comments or concerns please use a separate sheet.

>So you're saying they DO work if assembled correctly...
Sure. There were some synthesizer spurs that were fixed with
judicious grounding. The VHF receiver sensitivity wasn't fabulous
(approx .40uv/12db SINAD). The transmitter would oscillate badly
when mistuned. Two kits arrived dead and left working. I'm
not going to claim that they were fabulous performers. Nor were
they stable over a wide range of temperature or power supply voltages.
However, they do operate. I didn't see anything "illegal"
or dangerous in the operation or design. Again, I do NOT
consider the radio a superior or state of the art product.
If it had a dual gate GAsFET front end, high level mixer,
helical resonators thruout, dual PLL tx/rx local oscillators
for fast TR switching, fewer tx spurs, tracking filter rx
front end, built in PL, RS-232 control, ad nausium..., I would
consider it state of the art. Is there some other kit manufacturer
other than Ramsey that has a superior product?

>>a while, I drag my Cushman CE-6 service monitor to the repeater
>>site and call out tx frequency and deviation for everyone checking
>You are a prince among hams! This would be a great service for all such
>capable amateurs and local clubs to offer. It's a great way to ensure
>that all those FM transmitters are operating properly. Again, I commend
>you.

I've received 4 pieces of email indicating that this would be
a good thing to do. All it would take is making friends with
your friendly local 2way shop. I've noticed a trend over the
last 25 years. The hams and the commercial operators appear
to barely tolerate each other. 25 years ago, every two way tech
was a ham. Now days, the techs with ham licences ask me not
to mention that they work for a commercial shop. One local ham
needed a commercial radio programmed for ham frequencies. This
proved to be a major political challenge.

My pilgrimage to the local repeater site (5 minutes from my office)
is not much of a challenge. I do it whenever I find the excuse.
However, 50 check-ins followed by 20 arguements does not encourge
repetition. What I ask is that they check in normally. If the
deviation is low, I ask them to YELL into the microphone. This
shows if the deviation setting is low or if the tx audio gain is
low. I have to explain the difference between the audio/mic gain
and deviation at least 10 times. The process has lasted as long
as 3 hours. Many hams will check in with every radio they own

causing me to get confused. The same hams check in with the
same screwed up radios every time. Little wonder the commercial
shops don't want to spend the time and effort.

At the last Winterfest in Montery CA, the KM6DZ group used the
latest greatest HP service monitor to check handhelds and mobiles
for anyone interested. Most everything was measured. Next year,
the box will probably be HPIB (IEEE488) computer controlled so that
it can be done automatically. Many of the brand new radios were
miserably adjusted. In spite of the large number of handhelds
in evidence, only about 50 radios were checked. It makes me wonder
if the others even cared.

It's not too difficult to turn your repeater receiver into a piece
of test equipment. Here's some ideas:

1. Instant replay. Install a speech recorder that records the last
10 seconds of a transmission. If someone wants a signal report, they
can hear themselves and judge for themselves.

2. You can measure SINAD remotely. Modulate the rx local oscillator
of the repeater to +/- 3.0Khz deviation at 1.0Khz. Notch out the
1.0 Khz tone at the repeater audio with a commutating synchronous
filter. The ratio of the audio before and after the filter is
proportional to the SINAD. If you want to go high tech DSP, read
the June 1993 issue of QEX for a program to do it with a TI320C25
DSP chip.

3. Measure frequency remotely. Many repeater controllers (RLC-1)
have A/D converters suitable for measuring the discriminator
voltage. Some have remote offset calibration functions for dealing
with adjustments and drift. Have the repeater belch the frequency
error.

4. There are still a bunch of tunable PL encoders in use. Our
repeater K6BJ returns a differnet courtesy tone depending upon
whether the PL decoder hears the correct tone. Just tune till
the tone changes.

You don't need a service monitor to get things right. It helps,
it's nice, but it's not necessary. Your repeater can do the job
adequately with some construction. If it works, turn it into a
kit and sell it.

Hello,
I have purchased a Yaesu ft-26 transceiver (US version).
I need to transmit in frequencies which are blocked.
Does it exist a mod for extended tx frequencies ?
Do you know how open the freq. 150.000 to 170.000 Mhz ?
Is it a solder jumper to remove ?
Does it exist a FTP site where I can find such informations ?
Thank's in advance.
Christophe

|> I can expect before investing in a QRP station!

Hi Andy,
I have just gotten into 40m QRP using the MFJ-9040 and a dipole. I have
yet to make a DX contact with it, but I HAVE worked all over the east coast.
The trick for DX is staying up late and hanging out in the low portion of
the band. The Novice sub-band gets horrible at night but below 7.050 or so
there is no broadcasting or voice operation. Canadians and some others in
Region 2 have phone priveleges where we have CW only. A buddy of mine works
40m into Europe on 2.5 watts on a regular basis.
I'm not sure what antenna you have in mind. My dipole was easy to build
and cheap. I have room to stretch it out, but there are things you can do to
shrink it.
By the way, if you're considering the MFJ, count me as a big fan. Also, the
active audio filter is WELL worth the scant few bucks it costs. It is just
a couple of op-amps (on one chip) on a little daughterboard. Aren't op-amps
great!? Turning on the filter really kills the QRM!

I have one and I'm not that impressed. It's like anyother DSP
it's just a filter. I would like to have a DSP that's more flexible
and provide other features like FFT's, modems, adaptive filters and
signal recognition.

>Andy, K4ADL
>andy@clark.net
>

The key for me in working 40 CW successfully (and I'm not all that
successful!!) is having a good receiver and listening carefully
and diligently. Band conditions seem to vary quickly and drastically
on 40; you should be able to recognize when it is a good time to work
hard for DX and when you just might as well rag chew with the guy
down the street. I wouldn't (and don't) use any antenna that was
"worse" then a resonant dipole in performance. You might consider
some of the "shortened" dipoles if space is a factor; but I don't
have any experience with them.

BTW, I use 100W; I'm not bored enough to try QRP yet..... I believe
that most successful QRP operators have spent lots of time working
with "normal" rigs before they go to QRP. At least that's the
impression that I have.

cheers -- John, W3GOI

>Does anybody know the FCC's daily processing rate for Ham licenses
>and upgrades?
>- Tim Ikeda (timi@mendel.berkeley.edu)

this information could be determined by computing the differences between the callsign status lists that have been published for some time. it would be an average, but from that you could predict about where they are in terms of average licenses/period.

>
>For starters, I am not sure that few ever build projects from
>magazines.

Why? Haven't you polled your readers, in order to make intelligent
editorial decisions? Haven't you asked 'if not, why not?' '73' has
an article-by article reader feedback form, every issue. If you
don't have the information, you really aren't in much of a position
to either support or refute my assertion, are you?

>Some of the authors that have offered a kit have reported
>large sales

And god bless 'em if they do, for they are the ones who recognize
that parts procurement is 90% of the problem and 200% of the
expense of home-brewing. Someone who take the time to write an article,
and then offer a kit, with no intention of profiting by either is,
IMHO, entitled to some sort of sainthood.

>something else. Go to any hamfest, note the rows upon rows of
>vendors offering components. Hams are buying them, putting them
>in bags and taking them home. They must be doing something with
>the parts.

In my experience, they're gathering bits for something they'll
'get around to someday,' and or looking for a specific component
for some simple use.

>Even if hams don't actually build very many projects, they sure seem
>to enjoy reading (or thinking) about building them! All of the ham and
>electronics magazines offer construction articles. I don't think I
>would characterize printing articles that our readers like as "banging
>a drum", but you may have meant something I just didn't understand.

Yup. One of the difficulties, over the years, is that many of the
folks at ARRL HQ 'just didn't understand,' what it's like to live
in the real world without the worlds biggest junk box at their
disposal, as well as instrumentation, EE degrees, etc., in pursuit

of the hobby. Sure, I *like* reading the advanced construction articles, and dreaming that I might some day be entitled to hold the same end of a soldering iron as Wes Hayward. The fact is, though, that I'm doing good if I have the ability and time to crank up a two-transistor QRP transmitter.

The 'drum' being banged is one which rings out 'build build build.' The one that needs to be banged is 'how to get on the air with a key, a chunk of coax, and an HW-101 you picked up for a buck and a quarter at the ham-fest.' Or 'how can a tell a good old FM model HT from a dud?' Building is great. But there is NO substitute for getting a new ham *ON THE AIR* as expeditiously and cheaply as possible, and with the least angst. Sure, there're folks (like the gentleman from Hawaii who did some articles back in the 70's) who get their Novice ticket and home-brew everything from the wall out. And they're great. But that's just not realistic for most new hams.

The no-code ticket was instituted to reduce discouragement. The League fought it tooth-and-nail, until it was clear that the League had lost. This 'build it yourself' approach to basic communications gear is another source of discouragement, and a recipe for unrealistic expectations. The 'right' way, IMHO, is to get the new ham on the air down the path of least resistance, initially. Then encourage him/her to branch out, by building simple station accessories, perhaps a QRP transmitter to use alongside the HW-101 or IC-737, etc. By the way, the League and QST have flirted with this policy from time to time, but they can't seem to get away from the 'all home-built' ideal.

>Now, as for the big adverising dollars, I took a look at the February
>QST issue. I counted two 1/8th-page ads, two 1/12th page ad and a 1/24th-
>page ad, plus 4 ham ads, for companies offering kits.

I guess Ramsay's and Hamtronics' full-page ads didn't run in February.

>a small percentage of our total ad space; most of the ads are for
>some form of ready-made product. Our editorial policy is not influenced
>by our advertisers; it is determined by our perceptions of what
>hams want to see.

More correctly stated: 'by what the Directors want hams (particularly new hams) to see.'

>: As a hobby which has a tradition of mentoring ("elmering"), we are
>: doing the Right Thing(TM) when we identify something like a Ramsey
>: kit which is apt to blow a new ham's radio budget out the window
>: while discouraging him or her, and leaving him without a working
>: rig.
>
>Our QST Product Review did indeed point out the problems we found
>with the Ramsey FX-146. We also pointed out those things we like.
>This ensures that QST reviews are complete and unbiased. People
>who read these things are able to decide which things are important

>and buy accordingly.
>
>
And good it was. QST Product Reviews are the ONLY ones I would ever
trust. Mostly because I've seen gushing, press-release quality *articles*
in 73 and CQ, masquerading as product reviews. It only begs the question
of why, when this landmark kit has been on the market for several years
already, it was just recently the subject of a review in QST. Lots of
stuff of much lesser interest has appeared before this one. I mean,
I bought one of the close-outs of the first Ramsay 146 kits on sale
a good two years ago! Haven't got around to assembling it yet, but
I wish I'd known what to watch for before plunking even the bargain-basement
price on the counter.

>: I can expect before investing in a QRP station!

Andy...

The year was 1976, I was a Novice.

Rig: Ten Tec Argonaut 509, shiny and new. <3 watts out.

Antenna: Bent 40 meter dipole, fed with RG/174 1/8" coax. Antenna
hidden behind false roof on second-story. Three inches from wood
fascia, three feet above roof surface.

Sunspots: What sunspots, it was 1976!?

Results: Lots of fun on 40, some on 15, too. 30-odd states in four
months as a Novice. Enough contacts to go from 5 to 13WPM and upgrade
to Advanced in less than six months with no anxiety about code
speed. Typically five or six QSOs in each couple-hour session.

Recommendation: Go for it.

Greg

RACESBUL.311 RELEASE DATE: JANUARY 31, 1994

Subject: MGT - SEMANTICS 1/7

This is the first in a series in response to letters, messages, and queries at seminars.

Probably the biggest problem with these bulletins, and one that may never be resolved, is misinterpretation or misunderstanding of the written word. What is intended by the writer and how it is interpreted by the readers may not be the same. When RACES seminars are conducted in person it is much easier to clarify issues that arise over such misinterpretation as well as others.

Whereas these BULLETINS are called "RACES" they are for all communications volunteers in government service. This includes Public Safety, RACES and the Civil Air Patrol.

The current RACES BULLETIN series began in l985. It was the first effort to document program issues, ideas, definitions and guidance since 1960. They went national in 1989 at the request of the ARRL. In response, you have rewarded us with positive feedback, input and support from all over the U.S., Canada and Australia, for which we are most appreciative.

Series authored by Stanly E. Harter, originally titled "From My Lookout". Edited for digital transmission. Uploaded by unpaid [volunteer] professionals in public safety and public service telecommunications. (To be continued.)
eom

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races and can be retrieved using FTP.

RACESBUL.311 RELEASE DATE: JANUARY 31, 1994

Subject: MGT - SEMANTICS 1/7

This is the first in a series in response to letters, messages, and queries at seminars.

Probably the biggest problem with these bulletins, and one that may never be resolved, is misinterpretation or misunderstanding of the written word. What is intended by the writer and how it is interpreted by the readers may not be the same. When RACES seminars are conducted in person it is much easier to clarify issues that arise over such misinterpretation as well as others.

Whereas these BULLETINS are called "RACES" they are for all communications volunteers in government service. This includes Public Safety, RACES and the Civil Air Patrol.

The current RACES BULLETIN series began in l985. It was the first effort to document program issues, ideas, definitions and guidance since 1960. They went national in 1989 at the request of the ARRL. In response, you have rewarded us with positive feedback, input and support from all over the U.S., Canada and Australia, for which we are most appreciative.

Series authored by Stanly E. Harter, originally titled "From My Lookout". Edited for digital transmission. Uploaded by unpaid [volunteer] professionals in public safety and public service telecommunications. (To be continued.)
eom

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races and can be retrieved using FTP.

I did not see any introduction to carefully read.

What I was hoping for was antenna locations. Are these available in the
database?

FYI, there is also moving map software available in the $250 range for
either the Mac or PC. Takes the GPS output and displays position and
track on an image of the appropriate aeronautical sectional. It also
does a few other neat tricks.

Ads can be found in Flying magazine as well as AOPA Pilot - probably
many other flying mags.

Recently Terry Burge KI7M said...

>the R5 is a vertical dipole and as such does not have as much gain
>as a quarter wave gound plane or similar antenna. Note the Butternut as well
>as any other gound plane style antenna require radials, ground rods, etc.

The Cushcraft R5 is *not* a vertical dipole; it is a half wave vertical groundplane design. The R5 does not require any radials other than the ones provided by the manufacturer and mounted on the antenna at a specific point, i.e., no wires have to be laid out on the ground. The R5 also does not require a ground rod insofar as its performance is concerned, but a ground rod would probably be a good idea for safety purposes. The R5 covers 20,17,15,12, and 10 meters and works on 6m as well, although it is not claimed to do so. The R7 is the same design extended to include 30 and 40 meters.

Perhaps Terry was thinking of the GAP verticals when he said that the R5 is a vertical dipole. The GAP verticals are vertical mounted dipoles.

I've had a R5 for several years now and have worked many countries all around the world with it. I've also taken it to Field Day and carried it as luggage for a DXpedition. I'm very pleased with the R5's performance, and found it quick to take apart and put together for portable operation. When packed into the box it came in, it is within airline regs for normal luggage. The R7 is quite a bit bigger and when packed up would probably be considered as oversized luggage by airlines.

73,
Scott WO1G
P.S. I have no affiliation with Cushcraft.

I too was hoping for a little different implementation. I noticed that
you must exactly match the Licensee name (MC DONALDS REST works whereas
MC DONALDS does not work) as it is in the licensee field.

I suspect that this is just an early version of the software and it is
still being revised. If this is so, a couple of features I would like
to see would be a secondary search criteria (do you know how many licensee's
there are for 154.6) such as city, zipcode, and maybe partial matches of
the licensee.

I do however realize that you (tcomeng) are providing a service and asking
nothing in return (cept name recognition). Thank you for providing this
lookup service.

: of a new guy, and dunno what thats all about. I asked about it
: the local 2 meter repeater, and you should have heard the
: snickers and snorks. I quickly surmised that it was a secret.
: So keeping with the spirit of fun, I will not just ask
: what this is all about, but I do have a few questions:

: 1. Is it something that the OFs will enjoy at us new guys expense?

No, if you are into a bit of nostalgia and tradition, you will probably
be glad you went. Those who want to look down their noses at anything
that is less modern than rap would probably be better off to retire
early.

: 2. Is it an event that I would prefer no one had a camera at?

Only if you plan on embarrassing yourself.

: 3. Would I be any less likely to get home that night than any
: other night?

You will be fine; well, maybe. At most of these ceremonies,
the chairs are arranged in rows, with a set of chairs across
the back. Don't sit in the two chairs across the back wall
in the middle row . . . no, I have said too much.

: 4. Will my health insurance cover anything thats likely to happen?

More'n likely.

: 5. Is there a potential for any embarassment to any involved?

Like most bad things in life, only that which is self-inflicted.

: 6. Could I be black-mailed for being there?

Only by those who look down their noses at anything less modern
than rap!

: 7. Why am I so paranoid about this?

See the answer to #5. :-)

Good luck!

Actually, I finally attended a cermony. I hate rap, so I enjoyed myself.

Hi,

Can some kind hearted HAM help me order some parts from Amidon Associates Inc. I do not have the catalog so I do not know how much to send, how much for shipping, minimum order. This is for sending to Singapore where toroids are non-existent. I am also in need of MRF472 or MRF476. The toroids I am interested in are:-

4 x FT37-43 core
2 x FT50-43 core
2 x FB73-801 ferrite bead
73 de 9V Daniel 4 x T-50-6 core
2 x T-37-6 core

Would appreciate any help for ordering these stuffs. Need them fast. I need 2 MRF-472 (or MRF-476 if 472's are not available) and also a 14 mHz fundamental crystal. What is the fastest way I can get hold of these? Tks.

73 de 9V Daniel

SYNOPSIS OF ACT

Solar activity was low. Only one C-class flare occurred:
an uncorrelated C3 at 0110Z. The remainder of the period was
remarkably void of any activity. Region 7662 (S16E10) is
showing some modest growth. Some new emerging flux groups were
observed just to the west of 7662. The remainder of the sun was
quiet and stable.

Solar activity forecast: solar activity is expected to be
low.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be predominantly unsettled for the next three days.

Event probabilities 31 jan-02 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 31 jan-02 feb

A. Middle Latitudes
Active 25/15/15
Minor Storm 15/10/10
Major-Severe Storm 05/01/01

B. High Latitudes
Active 25/20/20
Minor Storm 15/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Near-normal conditions should continue over the next 72 hours.
The risk for SWF activity over daylit paths has diminished.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

934. Hambladter Up date

Newsgroup: rec.radio.amateur.misc
Date: 1994-01-31 18:28:22 UTC
From: jwa@tellabs.com
Message-ID: <1994Jan31.182822.3336@tellab5.tellabs.com>
Source record: 271713

The Hamblaster Update

Over the past several months I posted updates about a
DSP "The Hamblaster" that Will Torgrim (N9PEA) and myself
are developing.

We are focusing our efforts on a packet modem that allows
the user to improve H.F. reception by interfacing the Ham-
blaster (a PC compatable DSP sound board) to a transceiver
and a packet or all mode TNC. Modems/filters for RTTY,
Packtor, Amtor are also under developement and are compatable
with the same control panal software.

Here are the latest developements
1-31-94

1) The Hamblaster can play ".wav" files
at sample rates less than 15 kHz.

2) Adaptive (LMS) filter

There's ongoing developement in this area.
We are planing (I don't think this has been
done before) to add controls to the LMS algorithm.
You can, for example, change adaption time and
filter taps.

3) Fast autotune
We have a fast autotune routine that locks a packet
modem to the received signal in few milliseconds.
Tuning is a big problem on H.F. packet. Some stations
are off frequency so bad, the tnc can't receive the packets.
The auto tone (or AFC) locks the DSP modem by changing
the filter coefficients.

1-3-94

3) We now have FFT analysis software built into the o-scope control
panel. When you click on the "Freq" button the audio spectrum is
displayed. You can move the mouse cursor over the display and
where ever it is positioned, the frequency is displayed in the
status window. When you click the mouse the modem filters jump
to the frequency. This feature provides a simple tuning aid.

Another button allows you to convert all 4 traces (mentioned in
paragraph 3) to spectral displays. You can, for example, analyze
the frequency at the input signal, the modem prefilter and the

mark filter output. Based on the FFT, a second button allows
you to modify the filter tune limits by clicking on min-max
limits that you select.

I have to admit, After I debugged the FFT software and got the
control panel working to my satifaction, I got hooked on the
operation of the Hamblaster system. I spent hours tuning the 40
and 20 meter bands, displaying the FFT and copying CW/RTTY signals
through the Hamblaster filters. The FFT really simplifies the
tuning process.

|> Having heard from one of my friend about the ITR, Internet Talk Radio.
|> Wonder what they were? Can anyone give me a light on this?

It's a professionally produced show that sounds much like National Public Radio's All Things Considered. Yes, it's actually sound files that are designed to be downloaded into your computer and played through the speaker.. you don't read it, you listen to it.

I believe it's more oriented towards technology discussions, but I understand they're going to break that mold in time. They distribute the sound files uncompressed, so they're huge. But, in today's market of below a buck a megabyte hard drives, space isn't so much of a consideration.

Poke around in alt.internet.talk-radio or something similar to that. They seem pretty interesting (I've read enough about them..) but never sat down, downloaded a show and played it. Sure made me think about Inet distributed sound materials, though.

Probably depends on where in the pattern you are, can't think of any
inherent reason for a quarter wave ground plane to have more gain than a
vertical dipole. If I understand what is meant by a quarter wave ground
plane its a 1/2 wavelength antenna but the bottom leg(s) are not in the same
plane as the upper.

Source record: 271762

Last week I described a DSP filter that several hams in the Eugene, OR area are now using. I also posted a short description about the filter which AI7W composed after we received several inquiries about the unit.

This morning I received the following message which might get your interest piqued a bit more:

After reading your description of Steve's filter, I went out to his place yesterday for a live demo. It's amazing! Why aren't these folks advertising in the ham mags? The filter plus program are less than the other popular DSPs I see.

Of course, it does have a couple disadvantages: you need a computer with considerable horsepower, and maybe VGA color monitor; and the filter and its control program are so interesting that I spent more time fiddling with it than I did listening!

73
W7KPZ

I have no affiliation with the company that makes this filter. I'm just amazed at what this unit does and how it does it. Steve gave this contact info:

The address and phone for Digital Interactive Signal Corp. is

Digital Interactive
2317 N.E. 168th Ave.
Vancouver, WA. 98684

206-256-8654

I don't think they're on the net.

good Luck Steve..AI7W

Hope this helps,

Steve/AA7FL

I'll second the recommendation - this is the ONLY DSP filter that lets YOU
design the filter, on the fly. It's major fun to play with, if nothing
else!

I should mention one thing, though - in the time domain, this filter simply
doesn't exist. There's no automatic notch, for example. You can see the
whistle on the spectral display, and draw a notch filter to zap it, but
the box itself won't analyze the incoming signal at all, beyond displaying it.

What this means is that the white-noise reduction functions found in other DSP
boxes are flat-out missing. There is no time-domain correlation at all.
But if you want to create the world's greatest SSB filter, tuned exactly
to your ear, at the swipe of a mouse, then this is the box for you.

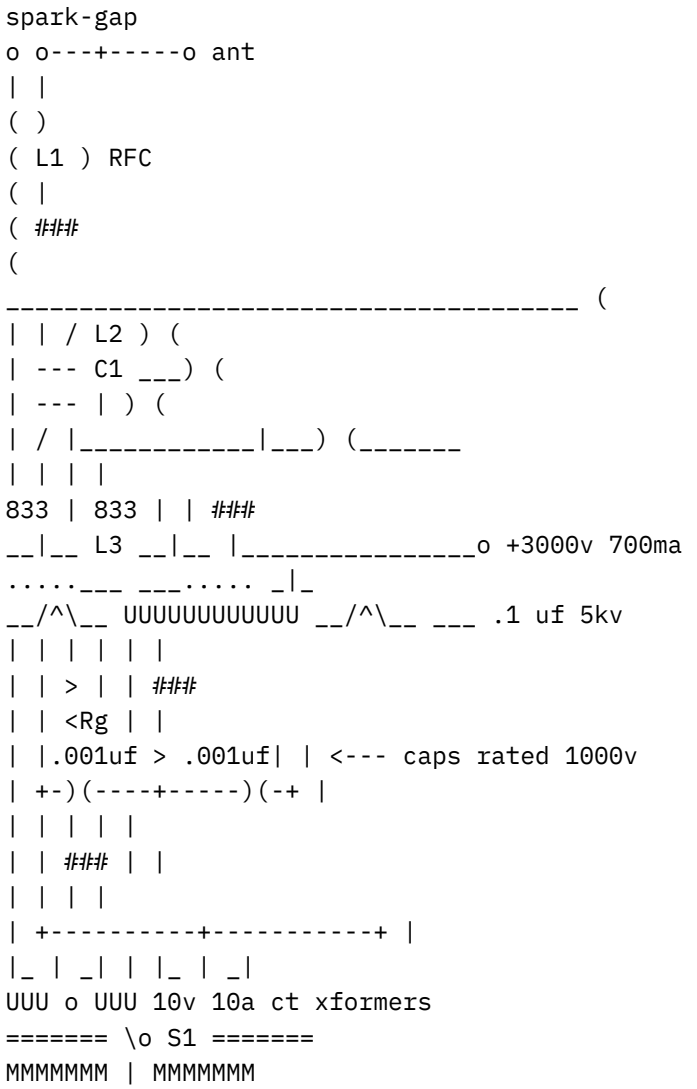
951. Spark Gap Transmitter

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-01 05:12:40 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <CKJ554.45u@news.Hawaii.Edu>
Source record: 271736

I posted this on .homebrew but thought some of you folks might get a kick
out of this too...
****
Gang,
If you actually build and attempt to operate this xmtr PLEASE do not
tell the authorities, when they come to pick you up, where you got the
circuit from (I'll deny everything).
Credit Randy, KA1UNW for the design. He's a prolific builder, specializing
in the design of QRP tube xmtrs, on our QRP mail net and on the boatanchors
mail net.
Remember boys and girls, this offer is void where prohibited...

TSB xmitter



```
| | (.)mtr | |
o 117v o | o 117v o
>D F-24-a 's may be subbed for
| carbon mic 833's if supply's are made
### larger.
```

How it works:

The 2 tubes form a push pull power oscillator which makes alternating
current, but at a radio frequency.
This is done by use of L1 , L3, and the 2 little tubes.

In this case, the actual frequency is not important, since the objective
is to generate maximum bandwidth...the goal of any 'phone station.
C1 is used to obtain maximum power by resonating L1 to L2's natural freq.

This RF voltage is stepped up by a factor of 30 to 100X by L2 and sent on
to the spark-gap, where the actual RF-to-be-sent is generated.

The RFC keeps the ant ckt at DC ground, yet will not short out the RF...which
is sent from the sparkgap, to the ant.

The ant wants to be one wire, and end fed. No coax required..just hook 'er
up and duck.

The length of the antenna determines the sending band it will be on.
The formula to use to get that length is...

Feet = 468/(((F*F) +730) -(F*F))

F = frequency in Mhz (rounded off to nearest 100 Khz)

Voice modulation is done by use of a special Carbon Microphone, as used in
the 1920's...which can handle several amps.

Here, rather than sending RF thru the mic as was done back then, only DC
is sent thru.

That way, the operator (or inflictor) won't get an RF burn on his lips if
he speaks too close to the mic.

That modulates the power to the tubes , which varies the intensity of the
spark which then puts quite suitable a signal on the air.
The intellegibility will match the content of some of the QSO's now on the air.

To operate:

1 Place mouth near carbon microphone.
2 Close S1 and adjust C1 for dip in current (mtr) quickly.
3 Make oinking and Mooing noises to indicate your presence to everyone.
4 Open S1 when you get around to it.
****

Again, credit (or blame) goes to Randy KA1UNW for this pup.

Jeff NH6IL

Yes, that's the major problem. I doubt that the transmitter isolation
would stand up to 1500 volts DC being fed into it, and the received would
very definitely become plastic charcoal!

> Id go to the ocupational health and safety officer and present a case

This could be worthwhile pursuing, but of course with the new radio
system being progressively installed any action would be non-resultant.

> Not the best, but at least you have removed the situation where you are
>in a metal box, holding the annenna next to your head, with the RF bounceing
>around untill it finds a window..

Yeah - it's kind of like sitting in a microwave, except that the RF is
at UHF and not SHF. I never understood how these so-called communications
engineers worked out that we'd be able to get a decent ammount of RF
outside of the metalwork of the loco cabs. Most of the time when we're
on the older engines (hood units) the only way to get good signal levels in
and out is to stand outside on the walkway with the radio!

Archive-name: radio/ham-radio/elmers/admin
Revision: 1.6 12/26/93 15:45:09
Changes: Added new index file, Gopher, WWW, and WAIS entries

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
Called "Elmers" because they are usually older and wiser, having the
```

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio: Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at rtfm.mit.edu (standard port 210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

Amateur Radio Elmers Resource Directory (as of 02/01/94)
++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host
scheme. I also chair the NZART Frequency Management and Technical
Advisory Group, which is responsible for all repeater coordination and
band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would
be pleased to answer any queries with regard to reciprocal licensing or
frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.tele.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes,
soon to replace with Tnet-x1g on one and a PC NOS-switch on the other.
And, I have successfully installed UUPC/extended 1.11k and SNEWS for those
MS-DOS afficionados out there.

ampr.org IP Coordinator for California - Los Angeles and San Fernando
Valley subnet (44.016.xxx.xxx)

"We're here to help, we don't loan tools" (Just kidding....put me on the
list). Monday-Thursday 8 AM to 9 PM Pacific time, Friday 8 am to 5 pm.

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting
company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would
like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals
in amateur radio. The first manual was the DJ-590 and subsequent manuals
included the 560,580 and 600 for Alinco. My contacts in the amateur radio
community have helped other amateurs to know more about products, hidden
features and new product offerings. The BBS will now included the latest
info on YEASU and ALINCO products. If you have a product that you wish to
have evaluated for the general amateur community, please contact before
sending.

If you have questions with regard to customer service at these
companies, please forward to me and they will be passed to the company
contacts.

**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook

with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

AA4RE Packet BBS

Poster of RACES Bulletins

Thanks to Chris Spell <spell@seq.uncwil.edu>, there is now a mailing
list for AA4RE BBS program sysops. I hope all will subscribe. It
should be very helpful to all of us.

To send a message to the mailing list send it to:

aa4re@matsci2.uncwil.edu

To subscribe to the mailing list a user needs to send a message to:

aa4re-request@matsci2.uncwil.edu

With the following in the body of the message:

subscribe aa4re your_account_name@your.address.whereever

To unsubscribe one would send this text in the message:

unsubscribe aa4re your_account_name@your.address.whereever

++

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Bill Standerfer * Hewlett-Packard Company
CFI-A, IA, ME * VXI Systems Division
bills@lvld.hp.com * Loveland, CO 80539
Baron N222AB - KF0DJ - Pikes Peak 253 * 303-679-2378

I'm certainly willing to be an Elmer if there's a need. I hope I've learned a few things in 27 years on the air. :-) Here's a list of subjects I might be able to help with:

Antennas
General Operating Practices
Older (Tube) Equipment
Test Equipment and Measurements

++

Steve Sternitzke, NS5I

sds@sat.datapoint.com

I work with the W5YI-VEC organization ("official" title - assistant VEC) and I write the VE manuals for W5YI. Add my name to the list of people who are available to answer questions about volunteer exams, FCC policies (as related to hams), the licensing question pools, etc.

++

Dave Stine WA2JTA/6

My areas of expertise are:

- vacuum tube amps, receivers, exciters
- CW operating tips
- wire antenna tips, hints & kinks

++

David Stockton, GM4ZNX

dstock@hpqmola.sqf.hp.com

SWL since 1960
Licensed since 1984 (UK full class A)
Degrees in electronics&comms and digital techniques etc.
Currently senior design engineer doing RF design

Fairly broad interest in amateur radio (but not contests!)

Antennas, Transmission lines,filters from fundamental theory to practice
Receiver structures and circuits from simple to state of the art.
Transmitters, ATUs
Test equipment
Wide experience of troubleshooting/repairing equipment.
Professional experience of EMC/RFI
QRP
UK Operation and Licensing

My morse is flaky, but I keep working on it
No interest in contests
No interest in packet radio or in fixing computers

++

Ken Stuart, W3VVN
48 Johnson Road
Pasadena, Md. 21122
401-437-1758 (home)

kstuart@oasys.dt.navy.mil

via packet: W3VVN @ N3ETI.MD.USA

Have been licensed since '53, currently Advanced class. ARRL Technical
Advisor since '80 on Batteries and Power Supplies. You may have seen
my article in the Feb. '91 issue of QST on NiCads. Authored the rewrite
of the power supply chapter of the ARRL handbook in '85 when the new
format was generated (large page, versus the old small size). Most
of the stuff is still unmodified. Currently lecturing on battery
care and feeding to clubs in the Baltimore/Annapolis area.

I have been employed as a power supply design engineer for about the
last 25 years.

|>

Hi Frankie,
Your suspicions about the cable are absolutely correct. RG-58 is horrible
at the GPS frequencies. ANY RG-8 type cable is better than RG-58, but you
may want to invest the extra bucks in Belden 9913 (or equiv). It's about the
best RG-8 type cable around for the money. It's low loss and has a semi-hollow
dielectric which makes it a little more difficult to solder on connectors.
With a little care, you should be OK, though.
Good luck es 73 de Glenn, N3BDA.

> 73 de 9V Daniel

A very fast way to find a 14MHz crystal is to remove one from
an old IBM PC clone. They all have a 14.31818MHz crystal in them, and
you should have some luck finding old turbo PCs, dead, very cheaply
(like free if you know where to ask).

960. QRZ! Ham Radio CDROM $15.95 (Update)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-01 14:57:57 UTC
From: mjohnsto@ditdah.Morse.Net
Message-ID: <1994Feb1.145757.11513@ditdah.Morse.Net>
Source record: 271643

Thanks to all those who've responded to our offer for the QRZ! Ham Radio CDROM. The sheer volume of calls, though, took us by surprise and many of our customers have been complaining about incessant busy signals. To correct this, we're going to be adding additional 800 lines.

The ensure that everyone gets a chance to take advantage of this, we've extended the offer through the end of February. You can still get the *New* QRZ! Ham Radio CDROM (12/93) for $15.95 plus shipping. We offer an unconditional return policy on this CDROM. If you're not satisfied, simply mail it back to us and we will refund your money.

To place an order, call 800-706-4046, from 9AM to 5PM, EST. As an alternate means, you can email your ordering information (name, address, credit card info including expiration date) to info@morse.net. We will email you back an order confirmation.

=-=
Summary of Contents for the 12/93 QRZ! Ham Radio CDROM
=-=

The QRZ! Ham Radio CDROM is the most current amateur radio publication of its kind. It contains name, address and license information for over 650,000 amateur radio operators. Search and retrieval software for *both* DOS and Windows 3.1 provides rapid access at the touch of your fingertip. Search and display by callsign, name, city, street address, or zip code. Save the results to a file or generate pint ready mailing labels! Industry standard ASCII output files are word processor and database ready.

QRZ! Ham Radio CDROM also includes:

* Hundreds of PC compatible Amateur Radio Programs.

* Radio Mods (in hypertext under Windows)

* TCP/IP software, Packet Radio BBS's, Satellite Tracking Programs

* CW training software, Radio Control Programs, Contest Logging

* RTTY, WEFAX, Baycom, Rose, TheNet, TAPR, DSP

* FCC Part 97 rules and regulations, Amateur Radio Exam Question Pools

* USENET Ham Radio Archives, ARRL Bulletins

* Sound Blaster Compatible .wav files for TNC testing.

961. Re: 2-Meter in London and Dublin?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-01 15:04:41 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CKJwJt.Bo9@hpqmoea.sqf.hp.com>
Source record: 271642

You'd best contact the ARRL, they should have all the info needed

You will need reciprocal licences for both the Irish republic and for the United Kingdom. You might have trouble even getting your radio into the country without one (or might not... enforcement is a little variable)

UK 2 metre band is only 144.000 to 146.000 usual channel spacing is 25kHz, with some people using 12.5 kHz. Repeaters have input freq 600 kHz below output freq.

Simplex FM calling on 145.500

repeater outputs usually 145.600 "R0"
145.625 "R1"
145.675 "R2"
145.700
145.725 etc.
145.750
145.775

Don't transmit above 146

There are fewer repeaters than you are likely used to, none are private, none are closed. One of their licence conditions is that they must be available to all licenced radio amateurs. Unfortunately some in the London area are prone to jammers.

In this country it is illegal (fines, jail, confiscation of all radios) to listen to anything that you do not have a specific licence for - this means ANYTHING other than broadcasters and amateurs. The police are growing aware of scanners and have made total fools of some people scanning their radio systems with spoof reports of flying saucers used to get the eavesdroppers to go see, and be arrested. Cases are rare, but it is most unwise to wander around a city with police, fire, etc noises coming out of your radio.

Have fun
David GM4ZNX

You might be tight on time..

Jim Hollenback (jholly@cup.hp.com) wrote:
: Michael D. Maxfield (tweek@netcom.com) wrote:

: : I too was hoping for a little different implementation. I noticed that
: : you must exactly match the Licensee name (MC DONALDS REST works whereas
: : MC DONALDS does not work) as it is in the licensee field.

: of all the things to listen to on a scanner, I still am trying to figure
: out why some one would want to listen to "that's a big Mac, ...". Watching
: paint dry must really make some people wet thier pants.

Quite the contrary. I found one by accident, and while waiting for a
simple cup of coffee I could tell the two cars who had ordered before me
were going to cause a 15 minute + wait. I decided quickly (because I'd
heard the order/reply/sleepiness of the clerk) that maybe I should go
elsewhere. Had I not heard what was in front of me, I'd probably have
waited until I was fuming mad and then left. So now, I don't need blood
pressure treatment! :)

Actually - any radio broadcast has it's usefulness. Its up to the
listener to decide what that usefulness is. (and it's legality, of
course, disclaimer alert, etc, etc, etc)

I am new to this group, so pardon me if this has been asked recently. I have not transmitted anything in the last 3 years due to the usual reasons (new job, new house, new kid, no time). Now that I am getting things back into shape, I would like to know what the FCC regs are in regards to a change of callsign. I moved from New Mexico where I had the call KA5WTO. I would like that changed to reflect my new district (3), and at the same time reflect my Advanced class. Is this possible, or do I just sign /3 forever?

John
KA5WTO

965. Dayton Parking: Hell on Earth!

Well folks, if you've read the latest Ham Radio Newsline you MIGHT have noticed the casual mention that their MIGHT(?) not be busses available to shuttle people around from hotels to Hara this year.

I tended to take my car anyways and pay the $5 to park in the field on the east side of HARA... but if those busses are not available... be prepared to spend HOURS in what will undoubtedly be the worse traffic jam this side of L.A.

Anyone remember the rain two (or three?) years back? That field turned into a swamp trapping dozens of cars and RV's for the weekend. Imagine it with... say... 6,000 more cars?

Is anyone associated with DARA on the net? What "improvements" do you folks plan to make with the money saved on not providing the WONDERFUL bus service? The hamvention is the greatest event in all of ham radio and short of moving to a bigger city, I can't think of anything you could do to make it better. Well, there are those grey hot dogs they sell... but that's Ohio for you.

I'm not out to scare anyone away (heh heh) but that guy who posted the "Jesus is coming" thread can rest easy because not even the Lord himself will be able to get out of the traffic jam around Dayton on April 29th!

Actually, that was just to test the system... Drive-ups indeed are rarely
exciting... although there may be other interesting things on the same
frequency... I remember one day in particular, after setting up some
audio-visual equipment for a conference at a conference center I do some
work at, I sneaked a peek at the frequency on the groups wireless
microphone and punced the frequency into my car's scanner... well, within a
mile from the conference center, I picked up three different transmissions...
the local McD's... the Dave DelDotto Conference, and the treat ;-) an
aerobics class at the local Health Club 1-2-3-breath ;-)

: I wish to use them for their callsign databases.

: Can I mount these CDROMs from SunOS/Solaris? (ISO9660?)

Yes. Any CDROM that is ISO9660 will work on a Sun.

: Is the callsign database contained therein usable without
: any of the x86 .EXEcutables that may be there?
: Is the callsign database in a reasonably massageable format
: that a reasonable C program could grok?

C source code for the retrieval software is included for Unix.
This software would probably also work under other systems, although
some modifications would no doubt be necessary.

I attended the Dayton Hamvention for the first time last year.

The first day (Friday) my friend and I tried parking close to the arena (We had to leave early to pick up a friend at the airport in Cincianti). We ended up walking several blocks. It was a rainy weekend and we figured the private lot would turn into a mud pit very quickly (It did).

The next day we tried parking at the Salem Mall, one of the satellite parking lots.

We were close to the bus (50 ft). The Busses (sp ?) arrived every 10 minutes, and it only took a couple of minutes to get to the arena.

It worked so well that we made serveral trips back and forth carrying our purchased treasures to our car.

(The lots were patrolled by security personel)

Needless to say, that's what we did for the rest of the Hamvention and plan on doing this year.

Oh, and it was FREE too!

I hope that the DARA keeps this service, it's an excellent idea!

A reminder to all that the American Radio Relay League
continues to make available to Amateur Radio Operators and
non-amateurs alike a wide variety of free materials and
services. Of particular interest to the not-yet-licensed
individual would be the ARRL Prospective Ham Package. In
the PHP, one would find:
-
1. Printouts of Volunteer Examination session
opportunities in his/her area.
-
2. Listings of Amateur Radio clubs in his location.
-
3. Helpful promotional material about the Amateur Radio
Service.
-
The already-licensed individual might well be interested
in another free ARRL publication, the ARRL Public Service
Communications Manual. The PSCM represents the "bible" of
public service communications, and clearly/concisely
points out how the ARRL National Traffic System and the
ARRL Amateur Radio Emergency Service function as a
cohesive unit to provide the maximum support to the public
both in times of disaster as well as "normal" times.
-
To obtain these free ARRL services, please
provide me with:
-
A. Your name
B. Your mailing address
C. A Specific request for either of the two services
(the PHP or the PSCM) mentioned above.
-
73!

]Hello,

] I'd like to have some good quality coaxial cable. Can you give
] me any suggestions if you know?
]
] I am making a project on global position system. Previously, I
]used
] a coaxial cable of 10 M to connect the antenna and the GPS
]together.
] It worked normally. However, when I change the cable to be 80 M
]in
] length, I can't get any signals. I suspect that the signal loss
]in
] such a long cable is very great. So I want to buy a cable of
] better quality to reduce the loss.
]
] Now, I am using a 50 ohm cable, RG-58 A/U!

] Thanks!

--
Frankie Choy

Frankie:

Use some Belden 9913 or equivalent. Buit remember it's not very flexuble.

I don'y use any RG-58 anymore except for a few jumpers around the shack.
As the need replacing, I'm converting to RG-223

986. DSPs are hot

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-01 19:25:10 UTC
From: kg7bk@indirect.com
Message-ID: <CKK8Lz.3zG@news.direct.net>
Source record: 271662

Here's a quote from Feb. 8, 1994 PC Magazine:
"Modems and sound boards are shifting from fixed-function chips to more versatile digital signal processors(DSPs). You'll also see DSPs speed up video boards, enable PC-based videoconferencing products, and control some of the cellular-phone/personal-organizer products you'll see competing with PDAs. Because none of the programming is hardwired in, DSP-based products are infinitely upgradable. Find a bug in the soundboard? Want to upgrade the modem from 9,600 to 14,400 to 19,200 bps? Want to add fax? Just download a new version of the code to the DSP from a BBS or a floppy disk. The implications:(1)DSPs, while not cheap, are so flexible they'll drive down board prices. (2)You'll see more two-in-one boards, such as modem plus sound and sound plus video."

987. RECIPOPS from ARRL HQ

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-01 19:36:15 UTC
From: lhurder@arrl.org
Message-ID: <1994Feb1.193615.12926@arrl.org>
Source record: 271774

Yet another of the many free services that ARRL HQ offers is the
ability to obtain Reciprocol Operating permit information.

Matter of fact, ARRL HQ is the ONLY place on the planet where
this information resides!

"Awrite, already" sez you, "why would I ever want one, and how
much are ya gonna burn me to GET one?" "Glad you asked!" sez I

Radio amateurs are a constantly-travelling, very mobile, bunch
of folks, it appears, and their travels clearly take them to
countries near and far. Myself, I prefer "far" rather than 'near',
but if you're inclined to travel to Canada, you can ignore this whole
tome, as the Canadian government and our own here in the States have
worked out an automatic-reciprocity agreement.

But if Belize is on your itinerary perhaps, or any of the other many
countries with whom we share a reciprocol operating agreement, you're
in luck! Many foreign administrations DO allow U.S. Amateur Radio
licensees to apply for a reciprocol operating permit, and you need
but ask us for the complimentary package that we make available.

To make your trip more enjoyable in that regard, we need:

1. Your name
2. Your mailing address
3. A specific request for the RECIPOP package for the specific country
you'll be off to.

And, yes, an e-mail request is fine!

: In article <CKIEMA.KCq@srgenprp.sr.hp.com> alanb@sr.hp.com (Alan Bloom) writes:
: >... I wish QST had MORE construction articles, not fewer. ...

: I agree, but I also believe that the construction articles have
: to be carefully targeted, and within reach. I'd also like to
: see articles on older gear, both generic and specific, that with
: some wrenching, tuning, and tweaking, can be made more serviceable
: for the average newcomer.

: Call them 're-construction' articles. :-)

20 or 30 years ago, when military surplus was plentiful, there were lots of articles in the ham rags about how to convert military gear for ham use. There were also many articles on how to modify commercial amateur gear: "Add a Product Detector to a 75A2 Receiver" "A Q-Multiplier for the HQ-110" "Convert Your Command Set Into an SSB Exciter" etc. Not many amateurs built complete stations from scratch even then, but most did at least some surplus conversion or modifications to commercial gear.

I agree with you that QST should do at least occasional articles of that genre. Some years ago, QST virtually banned tube-based construction articles (other than high-power RF amplifiers), and I suppose that's all to the good. But there's a lot of older tube-type gear out there that sells for a song. With a little modification, those old clunkers could have a lot of life left in them.

For example, how about a digital readout that could be configured to work with most any transceiver/transmitter/receiver? (With modification instructions for several of the most-popular older rigs?) How about a synthesized external VFO? If it covered the 5 - 5.5 MHz (or so) range it would work with many older radios. I wish I had the time to work on some of those projects! Anybody else have more ambition than I?

Did anyone any where actually work or even hear this Dxpedition?

Nothing at all was reported in S.E. USA.

Thanks, Mike / NT4O

993. Kenwood TS940 pll-car unlock....HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-01 21:14:59 UTC
From: hawley@aries.scs.uiuc.edu
Message-ID: <hawley.760137299@aries>
Source record: 271630

My TS940 (1987 vintage) unlocks during warmup, receive (or xmit) goes away
and a half second later the display goes to all dots. This lasts for a blink
to a few seconds each time, and happens zero to a half dozen times only during
warmup from cold which takes 5 or so minutes.
I have done the following:
1. Inspected the PLL, CAR, and DIG A board for solder breaks...nothing obvious.
2. Flexed (lightly), cooled, and resoldered many connections on these boards.
3. Inspected the VR board and resoldered this and that.
4. Observed no power supply voltage changes during the unlock on these boards.
5. Observed the unlock signal occuring during the problem, but was unable to
tell which pll chip was sending it first.
During all of this extreme invasion of the 940's guts, the characteristics of
the unlocking during warmup has not changed one bit. Makes me think I'm on the
wrong boards.
I've also checked all the peaking up, and setting of vco ranges on the pll and
car boards according to many suggestions and bulletins. R100 on the pll board
was not the problem, as once reported here on the net.
Is there any particular coil that has been troublesome, or some other part
perhaps that anyone knows about?
The problem goes away during the summer months.
Help.

|> cheers -- John, W3GOI
|>

1. QRPers usually hang out around 7.040MHz on 40.

2. Late and nite the band comes and goes, so if it seems dead it might
be, but then again, just try it.

3. Three nites ago, worked an F6 from the home qth near Dallas. I was
using 0.95W on a 250' long wire up 33' pointed north. He was in the
contest.

4. In QRP work, the antenna seems to be everything. But, don't give up
just because you have only a dipole.

5. Patience, patience, patience. QRP separates the tolerant from the
intolerant rather rapidly.

6. Listen to 7.050MHz. If you hear a warbling signal, then the band is
very very long. I haven't found anyone to tell me what in the world
(or outta of this world) this signal is. Kinda reminds me of the
Over the Horizon Radar from the old USSR.

All the above IMHO. I've been doing QRP over 30 years and CW 35+, thus
I'm an OF, but I'm still learning. I haven't had any operations to talk
about over the air, so I guess I won't fit in the phone crowd..... :-)

You could get even with them by reporting them to the FCC for not ID'ing every ten minutes. I really don't know who they think they are - hogging so many frequencies; and they're certainly running more than the legal limit. Stuck up, too - they never answer my QRZ? calls...

Can anyone help me?

I have have the PK 232 and am having a hard time
trying to get it to work. I have a few different
TERM Programs but ther still do not talk to the
PK232.
I have a DOS PC and have the cable hooked up to
the big 25 pin serial port. The PK232 is hoked up
with Radio 1 hooked up by the phone plug for Receive
audio and the 8 or what ever pin gray cable to the
Xmit PTT and Mike Audio.
When I plug it all in and power it up it starts to
transmit a dead signal. If I disconnect the mike
plug and try to receive nothing will appear on my
Term.
When I power it up it will not even see the PK232.
I am not sure what that problem is.

If anyone can help Plese do I am LOST!!!

Thank You Ahead of Time For Any HELP!!!

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>
>Probably depends on where in the pattern you are, can't think of any
>inherent reason for a quarter wave ground plane to have more gain than a
>vertical dipole. If I understand what is meant by a quarter wave ground

If you are really interested in the relative gains, etc, of various lengths of vertical radiators, you can get a copy of the FCC rules and regs for AM broadcast stations. This used to be available for a very small sum from the government printing office. In it is a chart showing the field strengths developed by various lengths of vertical radiators. You will see that a quarter wave vertical does *not* have more gain than a half wave, actually less. The signal strength continues to increase as the length of the radiator is increased and tops out at 5/8 wavelength..hence the popularity of the 5/8 for 2 meter mobile work.

Also at work here is the fact that a 1/2 wave radiator has a very high driving impedance. Consider the antenna and ground to be in series, like two resistors. If the ground connection is high impedance,like when you have no radials, then, if the antenna is low impedance (1/4 wave), most of the energy is dissapated in the ground connection.. not at all what you want. However, if the antenna is high impedance (1/2/wave), then a much larger part of the RF is consumed in the antenna, which is what you want.

It's still probably a good idea to ground even a half wave vertical. It won't hurt and probably will help. Otherwise you're depending on the capacitance of the coax feedline to act as a ground and then there's the lightning thing...

One note concerning ground plane antennas. They don't work as "ground plane" antennas until they are sufficiently high that the RF field from the antenna flows more in the ground plane wires than in dirt. If it is too low, you get severe losses from a quarter wave ground plane. This can be overcome by increasing the number of ground radials. THe FCC used to require 120 radials to achieve proper efficency when the vertical was right on the ground. When it's higher, then you need fewer. Since the half wave antenna has mostly voltage at the bottom and not current (high impedance), then the RF field is highest

at the middle of the antenna and does not flow in the ground
so much..ergo, the efficiency is higher when ground mounted..unless
you want to put 120 radials on the 1/4 wave!

Hope this helps..

1002. Soundblaster radio programs?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-02 06:14:56 UTC
From: hruska@toybox.raleigh.nc.us
Message-ID: <1994Feb2.061456.1043@toybox.raleigh.nc.us>
Source record: 271641

I've just gained some interest in playing with my soundblaster
card for radio purposes.

I have been trying to use FFTMORSE, but I can't get it to do
anything but make clicking noises - nothing displays in the
frequency box. Any ideas on what could be wrong?

Also, what other radio programs are available that use the
soundblaster, and where might I find them?

1003. ARLB015 Vanity call extension sought

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-02 11:53:05 UTC
From: marcbg@netcom.com
Message-ID: <$arlb015.1994@ampr.org>
Source record: 271599
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

SB QST @ ARL $ARLB015 ARLB015 Vanity call extension sought
ZCZC AG79 QST de W1AW ARRL Bulletin 15 ARLB015 >From ARRL
Headquarters Newington CT January 28, 1994 To all radio
amateurs

The ARRL has requested an extension of the comment
deadline on an FCC proposal to establish a ''vanity'' call
sign system.

The FCC's Notice of Proposed Rule Making, in PR Docket 93-
305, was released December 29, 1993, with a comment
deadline of March 7, 1994.

The League immediately published the NPRM, in its
entirety, in February 1994 QST, asking members to make
their views on the matter known to their elected
representatives.

In its request for an extension of time for comments,
until April 21, 1994, the ARRL said that because the
matter of issuing preferred call signs involves a ''scarce
resource,'' the maintaining of fairness in the program
must be addressed.

The League also said that the March 7 comment deadline
simply did not allow enough time for ARRL members to
express their views on the proposal and for the ARRL board
to then formulate a position.

1004. ARLP004 Propagation de KT7H

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-02 11:53:46 UTC
From: marcbg@netcom.com
Message-ID: <$arlp004.1994@ampr.org>
Source record: 271600
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

SB PROP @ ARL $ARLP004 ARLP004 Propagation de KT7H
ZCZC AP18 QST de W1AW Propagation Forecast Bulletin 4
ARLP004 >From Tad Cook, KT7H Seattle, WA January 28, 1994
To all radio amateurs

Average solar flux was up over 20 points last week
compared to the week earlier. If it hasn't peaked
already, flux is expected to reach 135 in the next few
days and then begin a decline to below 100 before the
middle of February. Around February 9, 15 and 18 there
could be some disturbances, but look for February 3
6 to be very quiet, with especially good conditions on 80
and 160 meters.

Sunspot Numbers from January 20 through 26 were 54, 78,
102, 105, 106, 116 and 90, with a mean of 93. 10.7 cm
flux was 105, 110.8, 113, 118.3, 129.1, 132.1 and 127.8,
with a mean of 119.4.

The path projection for this week is from Seattle,
Washington to the South Cook Islands.

80 meters looks good from 0530z to 1500z, with 75 meter
openings beginning and ending a half hour sooner and
later. 40 meters should be open from 0500z to 1530z, and
30 meters from 0400z to 1630z. 20 meters looks good on a
few days around the clock, but the best bet is from 1600z
to 1800z and 0130z to 0400z. Check 17 meters from 1700z
to 2100z and from 2330z to 0300z. 15 meters looks good
from 1730z to 0200z, and 12 meters from 1800z to 0100z.
Check 10 meters from 1900z to 0000z.

1007. Expansion board for TI DSK

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-02 14:04:10 UTC
From: schro@nessos.sni.de
Message-ID: <schro.760197850@nessos>
Source record: 271647
Cross-posted to: comp.dsp,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

Expansion board for the Texas Instruments DSP Starter's Kit

Playing with the TI DSK is fun, but once my DSP application worked i found it boring to do the download every time i switched it on. I just wanted to use the DSK as a stand-alone device, so a boot EPROM was needed.

Fortunately i know a hardware designer and asked him for advice.
He said: "No problem with fast chips. Would you like a prototype?"
A week later i got it and it works great.

Now what about some indicators?
A few days later he had added an output port with some LEDs attached.
What about some external RAM for just another FIR filter?
...and i got 8K words of zero-wait RAM!

A board like this would be useful for other DSK owners and it's no problem to make a PCB, but first i have to find out if there is enough interest and what should be on it.

Boot EPROM?

EPROM/RAM in program/data space?

Parallel I/O ports?

Serial I/O chip with RS-232 socket?

Anything else?

If you have a DSK and are interested in an expansion board please send e-mail to the address below:

schroeder.pad@sni.de

Some people here who took their tests from us on November 28th ('93)
had their licenses arrive last week. That's a little under 9 weeks.

I'd expect your license to show up any day now. If it gets to 12
weeks and it still hasn't arrived, call your VEC, as an earlier poster
said. Maybe you could call after 10 weeks, if you've noticed your
mailman fingering his can of Mace every time he walks up to your
house. :-) We've all experienced that "attack the mailman" feeling...

Some other things to keep in mind about 9913. Remember that you'll need
special UHF N connectors if you plan on using the cable for UHF
applications.

Second, because it's solid core it takes a little more oomph to solder.

Hey, guys, let's watch the creative math!

: Deviations from day to day are less than 5 parts
: in 1000 billion (5x10^12).

5 parts in 1000 billion is not 1 part in 5x10^12, it's
5 parts in 10^12, or one part in 2x10^11.

1013. Access to VOA News by United States Residents

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-02 16:18:28 UTC
From: ck@VOA.GOV
Message-ID: <CKLuMt.IA3@VOA.GOV>
Source record: 271653
Cross-posted to: comp.infosystems,comp.infosystems.gopher,rec.radio.amateur.misc,rec.radio.shortwave,rec.video.satellite

Since we announced the availability of the Voice of America and
Worldnet Television public Internet server a couple of days ago,
I have received a number of anxious emailed inquiries from
Americans regarding the disclaimer attached to the announcement:

In accordance with U.S. law, program materials such as
the News and English Broadcasts newswire are provided
exclusively for recipients outside the United States.

The restriction on domestic dissemination of VOA and Worldnet
program materials applies to employees of VOA and Worldnet, and
not to other residents of the United States. In other words, we
may not actively attempt to transmit our programs or distribute
our program materials to recipients within the United States.
But anyone living in the United States who wants to take the
initiative to listen to VOA or watch Worldnet or read the News
and English Broadcasts newswire is free to do so, even though
they are not the reason why we have radio broadcasts, television
satellite feeds or a public FTP/gopher server on the Internet.

Here are some examples of how the law works:

o VOA may not establish a network of affiliated radio stations
inside the United States, as we have in many other countries.
However, if a cable television provider wants to downlink VOA
programs from a satellite and carry them on an audio channel
-- as, indeed, one does here in Washington, D.C. -- the
government may neither facilitate nor interfere with that
activity.

o Worldnet does not offer its television programs to American
networks or stations. However, if an original Worldnet program
is newsworthy, anyone who can receive it is free to rebroadcast
it. (Obviously, this does not apply to copyrighted commercial
programs that Worldnet distributes to other countries under
licenses from their producers.)

o Anyone in the United States can listen to a VOA shortwave
broadcast or FTP a script from our public Internet server,
and then redistribute that tape or script to anyone else in
the United States. The broadcasts and the texts of the
scripts are not intended for recipients within the United
States, however, so please don't ask us to help you make
copies of them.

I hope this allays some of the concerns that have been expressed about access to the materials on our public server by residents of the United States. Normally when I post a USENET article, I speak only for myself, but in this instance I have been authorized to provide this explanation on behalf of VOA and Worldnet by our Office of External Affairs.

If anyone wants to discuss this subject further with VOA and Worldnet, there is a list of public electronic mail addresses on our server (ftp.voa.gov). Probably the most appropriate on is pubaff@VOA.GOV. Please don't send mail to me; I'm already swamped.

SYNOPSIS OF ACT

Solar activity was very low. All the regions on the disk
were quiet and stable. A 17 degree filament near S32W06
disappeared sometime between 31/2336Z and 01/1451Z.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled for the next three days.

Event probabilities 02 feb-04 feb

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 02 feb-04 feb

A. Middle Latitudes
Active 15/05/10
Minor Storm 10/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 20/05/10
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

HF propagation conditions were normal over all regions.
Good propagation is expected to continue through the next 72
hours.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1021. Hamblaster Update

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-02 18:43:04 UTC
From: jwa@tellabs.com
Message-ID: <1994Feb2.184304.18118@tellab5.tellabs.com>
Source record: 271668

The Hamblaster Update

Over the past several months I posted updates about a
DSP "The Hamblaster" that Will Torgrim (N9PEA) and myself
are developing.

We are focusing our efforts on a packet modem that allows
the user to improve H.F. reception by interfacing the Ham-
blaster (a PC compatable DSP sound board) to a transceiver
and a packet or all mode TNC. Modems/filters for RTTY,
Packtor, Amtor are also under developement and are compatable
with the same control panal software.

Here are the latest developements
1-31-94

1) The Hamblaster can play ".wav" files
at sample rates less than 15 kHz.

2) Adaptive (LMS) filter

There's ongoing developement in this area. We are
planing (I don't think this has been done before)
to add controls to the LMS algorithm.

3) Fast autotune

We have a fast autotune routine that locks a packet
modem to the received signal in few milliseconds.
Tuning is a big problem on H.F. packet. Some stations
are so far off frequency, the tnc can't receive the packets.
The auto tune (or AFC) locks the DSP modem to the FSK
center frequency.

4) More autotune info.

The Hamblaster can interface to a PK232 via the
the 232's External Modem connector and the Hamblaster
digital port. The PK-232/Hamblaster connection emulates
a PK-2232 allowing the user to take advantage of the DSP
capabilities by accessing a library of modems or filters.

5) Using the auto tune demodulator with the PK232:

When the auto tune feature is enabled, the modem locks
onto the FSK signal and, hopefully, the PK232 will
fewer packets. Even though the Pk232 filters are by-
passed, I connect the Hamblaster's audio output to the

PK232's "Radio 1 input". It allows me to use
the PK232's tuning indicator to roughly tune the fsk
center frequency within 100 Hz.

At least for now, the Hamblaster doesn't decode the data,
It just a filter. We are working on a KISS mode emulation
software. If we're successful, The hamblaster will interface
directly to the KA9Q software.

Hi there,

I am learning the morse code, and occasionaly I try accelerated rates
(15 wpm, e.g). And while I can get many letters, I find it impossible to
write them down. So this is my question :
How can you achieve at the same time listening and writing of the letters
at such speeds ? That seems a mistery to me.

73, Vince (9 weeks and waiting, still...)

Back on May 13th, I published an article on USENET about a SWAT incident that involved using my home as a command post.

Several readers suggested that I send the article to Monitoring Times or QST. I really did not think that either publication would have any interest in it, but since it was already written, I sent it to MT with a note that I can clean it up if they were interested.

They said that they were and would pay me $75 plus a year's sub, if published. They also said not to rewrite it too much or it would lose the spontanaity.

So, I cleaned it up & resubmitted it. It is on page 27 of the February issue. Thanks to those that suggested that I publish it!

I'll second the motion. The HTX-202 is also more sensitive on receive
than my ICOM-27H, of a late 70's or early 80's vintage. And the price
is right when Radio Shack runs one of their periodic "sales".

Hi all:

I have decided to dip my toe into the HAM radio hobby. I have a general idea of what I want but I want to make sure it is possible and that I purchase the correct equipment. I thought I would put the features I am looking for in a message and solicit any feedback.

FEATURES:

o Portable

o 2 Meter and 440 (I have no idea what this means but I have been told by several operators that this is the way to go)

o Scanning Functions
- Civilian and Military Air (Air Shows)
- Police and Fire
- Weather
- Cellular (for fun on Saturday nights)

I have looked at a couple of magazines and there are some really nice looking things out there like the Kenwoods and Icoms. I guess the dual band means 2 Meter and 440 but how do I figure out what channels they can scan and how good they are at scanning them.

Thanks in advance for your help.

Clayton

Rich, the problem is that todays HAM is a buyer not a builder. Thae
closest thing to this now days is a loose radio and a reliable set of
mods. Is this truly HAM radio, that is the true question.

1031. Re: 40 meter QRP (cw or ssb)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-02 22:27:42 UTC
From: JMG@tntech.edu
Message-ID: <01H8EZGJ1SCIDU7RYC@tntech.edu>
Source record: 271580

I think somewhere back in the dark ages some QRPer decided that they wanted to make themselves look good. They wanted to hang out in the local tavern and wind tall tales of their famous exploits. In order that the exploits appeared to be great they had to change some of the basic facts. Kinda like a guy taking a big old gun and shooting a caged tiger in the head then trotting down to the local bar and weave a tall tale about how a vicous tiger that had some dread disease escaped on a wild killing rampage and he was forced without regard to personal safety to track town the terrible scorge and with great personal peril save the lives of thousands and put the beast to rest (run-on sentence?).

OK, this opening may be as exaggerated as some QRP claims. I have been working QRP almost all the time I have had my license. We aren't talking hundreds of contact, we are talking thousands. I don't cq with a QRP identifier most of the time because it is really uneccesary. Most of the times you just don't need all that much power to have a QSO. Now there are many exceptions.. if you are in a big pileup you will need very good operating skills to get your puny signal thru the guys with a 2000 foot tower and a 50 element Yagi running 2000 watts. But it can be done if you develop the technique.

For normal contacts QRP is just ham radio with less watts. The majority of time the person on the other end of the QSO doesn't have a clue I am using lower power. I operate mobile ssb/QRP as well as mobile QRP/CW. Now speak about ineffecient antennas.. a mobile vertical (like Hustler) just ain't a Yagi or a Quad.. guess what .. I don't have much problem making contacts. I regularly operate on the 7 mile trip to town and even on a couple mile trip to get some lunch. I use a Ten Tec Argonaut 509. I have used the MFJ 20 and 40 meter rigs as well as small rigs that are from kits or construction articles. Yes the Texas Bug Catcher I just put on makes things better. A better antenna is always the best investment. But if you don't have one.. use what you got.

The way I got into QRP was by buying one of the first MFJ QRP rigs out. I made a quick resonant dipole and brought a spark plug and some rope around in a knap sack to help through the antenna up in the tree. Old age struck and I found places I wanted to operate that either didn't have the trees or I didn't want to hastle with the dipole. I found and article in CQ on making a portable PVC antenna that was real inexpensive and you can change to different bands by simply changing the top section. I have mine for 20,30,40.. 20 second changover time. Guess what.. that's right. .works fine..operate all weekend from a tiny 4 ah gell cell.

To test my "QRP is just ham radio" theory I often get in my car during SSB and CW contests and operate for fun mobile.. no problem..I don't do it seriously.. but have a great time.

Now .. take a really good antenna and you can make up the difference between the 100 watts and 4 watts quite easily. I finally got to put up a directional antenna about 9 months ago. It is the lightning bolt 5 band 2 element quad (also tunes 30,40, 80 with tuner). The first night I had it operational the only other QRPer in town came over and decided to put the new antenna through its paces. The first thing he did was turn the rig down from 100 to 5 watts on 20 meters.. the band was wide open. worked all over. Next he went down to 1 watt..no problem.. then 1/2 .. finally 70 mw.. worked Hungry for about half hour.. ended up going down to 1 mw and perfect copy. We worked Macedonia and all over Europe and some of Asia while less than 100 mw.. no problem. the band was really good.. but that happens. I have no problem with 1-4 watts regulary. The car rig is about 3 watts SSB and CW.

You will find that with CW you can get away with much less power than SSB.. but SSB QRP is fine also. I have recently started to work 80 meters QRP.. had thought it wouldn't work.. haven't had much of a problem.

There are times when you will need more power.. but I usually don't and feel real good about it.

but... don't find it that much of a difficulty or hardship.. OHHHHH think I will be shot for giving away well kept secrets.

73,

Jeff, AC4HF

1036. Antenna Price vs Performance

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-03 00:15:46 UTC
From: pschou@delphi.com
Message-ID: <9402021914591.pschou.DLITE@delphi.com>
Source record: 271585

FWIW here are my thoughts on the price/performance ratio of Ham HF antennae. The BEST and most expensive for point to point communication is a BIG multi-element rotatable directional antenna mounted at least one and one half wavelengths high over a saltwater marsh. <BG> Since this type of installation is not doable and/or desirable for most of us we need alternatives.

In my years of Ham activity starting in the late 1940's I have owned or used many types of antennae including some that came close to the theoretical BEST. I travelled extensively and used borrowed/scrounged stuff when I had to. The usual antenna would be a trapped 1/4 wave vertical dipole of some sort with whatever ground plane I had room for. I never noticed a bit of difference in performance between any of the major brands providing that they were of about the same physical length. I had the impression that a roof mounted vertical with four quarter wave radials worked better than a ground mounted vertical with the same radials. It should but I never ran any real tests. I also used wire dipoles and long wires at various times. In all cases I had a usable Ham station. I could communicate with other Hams all over the world as long as the propagation would cooperate.

My present antenna is a 105' G5RV strung haphazardly through the trees in my backyard. It works as well if not better than anything I have used. Because it is mounted more or less horizontal it does exhibit some lobing on the higher bands. I have tried a shorter G5RV (52') mounted vertically and was impressed with its performance even though the top was only 40' or so above the ground. We just folded the excess 90 degrees a few feet above the ground. If it ever gets warm again I suspect that a vertical G5RV type dipole will become my prime radiator.

I have found that the old adage "The more Copper the better." is true.
I have found that a long piece of wire hung from a tall tree is usually better than a trapped vertical, be it called quarter or half wave.
I have found that the tallest commercial Ham vertical works better than the shortest. (See "more Copper")
I have found that to work DX the fewer skips the better. This means height to lower the radiation angle.
I have found that even a 10' random wire will work under good band conditions.
I have found that a 20 meter beam at 30' is not much better than anything else at the same height. (Yes it's a little quieter.)

All in all I'd recommend a wire antenna as high as possible. Mount it vertically for an omni directional pattern or horizontally to favor a particular direction. Put your money in a tuner with a VSWR bridge.

If you can't hang a wire someplace a roof mounted 1/4 wave vertical with a minimum of four radials is probably the least expensive option.

The point of all this is that there are a myriad of antenna options and
that for the most part the difference in on the air performance is marginal.
The point is to get on the air. 73

A few comments and suggestions for you, Vince:
1) Use cursive writing - NOT PRINTING
2) Learn to use a keyboard (typewriter or PC). If you use this method,
after awhile, you may learn that you don't really know what you've
copied and will actually need to read it off the typewriter/PC display.
3) If you must copy with pencil/pen, it is likely you will actually be
several characters behind in your writing. That's natural.
4) BEST of all - put your pencil down. Copy everything in your head. This
will be the way to copy at the highest rate of speed. The *downside*
is if you need to have written copy for an exam. One friend, Ed AH6MI
(and 7J1AAE) passed his FCC exam at 20 wpm without ever writing any of
the transmission on paper. He claims he was too nervous. But, he was
good enough to remember all the key comments in the transmission and thus
was able to answer all the questions on the CW test.

Good luck & 73 de Sandy WA6BXH/7J1ABV slay@netcom.com

>Jeff, AC4HF

Now, those of you who are readers of r.r.a.homebrew have seen the dozen
or so simple QRP xmtrs I've posted the last 6 months; a couple folks
thought the less-than 1 watt xmtrs were useless for serious communications.
That's just not true, as you read above! And don't think that the band
conditions were abnormal that particular day; daily, on the QRP email net,
the guys and gals are documenting accounts just like above.

Again, if any of you would like to receive the QRP xmtr circuits I've
been posting, email me and I'll shoot them out to you (the response
has been huge).

The ARRL Letter Vol. 13, No. 2 January 26, 1994
Appeals court sides with amateur; tower victory reinforces PRB-1;
A federal appeals court in Minnesota has found in favor of an amateur and against a local municipality, the latest round in a three-year battle. The decision could affect how PRB-1, the federal declaration preempting local regulations, may be applied in the future.
Sylvia Pentel, N0MRW, applied in January 1991 for a zoning variance for a 68-foot crank-up tower from the city of Mendota Heights. At the time, she was using a roofmounted vertical which, she was unaware, violated the city's zoning rules (since it was taller than 25 feet). The city denied her application for a tower but granted a special-use permit to allow her to keep the vertical.
Pentel sued the city in US district court, saying that its ordinance was preempted by PRB-1, which recognizes the needs of both municipalities and amateurs, and which requires a "reasonable accommodation" of the needs of amateurs. The district court found in favor of the city, and Pentel appealed.
In overturning the lower court's decision, the US Court of Appeals for the 8th Circuit said that the FCC in PRB-1 "was attempting to strike a balance" between the interests of municipalities and amateurs, and exhorted Pentel and the city to work together to "arrive at a satisfactory solution."
The court of appeals said that its decision does not mean that the city must necessarily grant Pentel's tower application as it stands, but rather that the city must make a reasonable accommodation for her interests. The court said that granting a special-use permit for Pentel's vertical was not an accommodation "in any practical sense" because the record showed it was inadequate for her purposes.
Pentel's lawyer, John B. (Jay) Bellows Jr, K0QBE, said the importance of this decision lies in the court's shifting the burden away from the amateur and more toward the municipality.
"PRB-1 really is not about 'balancing'" Bellows said, "and this decision recognized that.
"I was particularly impressed with the appeals court's grasp of the overall subject," Bellows said.
The court said the distinction between balancing a municipality's and an amateur's interests, on the one hand, and accommodating an amateur's interests "is important, because a standard that requires a city to accommodate amateur communications in a reasonable fashion is certainly more rigorous than one that simply requires a city to balance local and federal interests when deciding whether to permit a radio antenna."
Bellows has previously appeared with amateurs at town council meetings and helped with the drafting of several local antenna

ordinances. He appeared with Pentel before both the Mendota Heights planning commission and the city council in her quest for a permit. Bellows was assisted by an ARRL amicus curiae brief filed by General Counsel Chris Imlay, N3AKD. Imlay also provided advice on strategy in the case.

"You never know how a court is going to be swayed by a friend of the court brief," Bellows said. "In this case," the League's participation did show that there was a national interest in such a matter, and demonstrated that the decision of the court could have wide-ranging effects."

Does public service work

Sylvia Pentel, an amateur since 1988, is primarily interested in public service communication. She is National Communications Officer for the Emergency Medical Preparedness Office of the National Disaster Medical Service.

She first became involved in public service communication after the Loma Prieta (California) earthquake in October 1989. Her local work, on VHF and UHF, expanded to the HF amateur bands, and she originally sought to replace her vertical with a beam following the earthquake.

"I especially wanted better HF coverage during the Desert Shield buildup to the Persian Gulf War," she said, but the town denied her permit at that time.

Pentel has an illustrious Amateur Radio legacy. Her father was Maurice Goldberg, 9APW and later 9ZG, a radio pioneer and early ARRL official in his division. His name appears over several technical articles in 1920s QSTs.

Goldberg, who died in 1977, did not live to see his daughter become a licensed amateur, but he did lay the groundwork. "Dad tried to teach me CW when I was far too young," Pentel said. "I thought it was a family thing, the 'Maurice code.'"

Pentel said getting a permit for her tower has "been a long, frustrating haul. I should have just gone ahead and put it up, considering there are several other amateur towers in town.

"Instead, I did the 'right thing,'" she said. "I got the ARRL package of materials and made a comprehensive application to the town, with engineering drawings and so on."

After getting favorable signatures from nine neighbors, Pentel ran into trouble when a couple of neighbors "began stirring things up at the hearings," she said.

But she is not to be deterred.

Her lawyer, Bellows, said the next step is to sit down with the the town fathers and "talk about accommodation."

League testifies at New Jersey RF hearing

ARRL General Counsel Chris Imlay, N3AKD, and Northern New Jersey Section Manager Rich Moseson, NW2L, have led a delegation of hams in testifying against a proposed New Jersey state regulation which, they argued, could effectively shut down Amateur Radio in the state.

The regulation, proposed by the state Department of Environmental Protection and Energy (DEPE) would require the owners of all fixed-station transmitting antennas and certain RF-generating industrial equipment to register with the state and pay a hefty annual fee. The fees

would pay for state inspections -- once every ten years -- to determine whether each RF source is in compliance with state limits for exposure to non-ionizing RF radiation. (The state limits are the same ones specified by ANSI - the American National Standards Institute - in their 1984 standards.)

The summary that was issued along with the proposed regulation stated that amateurs would be exempted "at this time," but there was no specific exemption in the regulation itself. And the department specifically invited comments on whether hams should be subject to the inspection program in the future.

The appearance by Imlay, Moseson, and about 10 other hams at a public hearing on January 11 in New Jersey's capital capped two weeks of intense efforts to spread the word about the proposal and to organize the ARRL response.

The proposal first surfaced the week before Christmas. As details emerged, it became obvious that the proposal posed a major threat to all ham radio activities in New Jersey. ARRL Hudson Division Director Steve Mendelsohn, WA2DHF, along with Moseson, asked ARRL President George Wilson III, W4OYI, to authorize Imlay's testimony at the DEPE hearing. Wilson agreed, noting the gravity of the threat to hams in New Jersey, plus the likelihood that, if the measure was enacted, other states might follow New Jersey's lead.

Some 50 people attended the hearing and about 20 testified, half of those being amateurs (although some hams appeared in their professional capacities). All of the speakers opposed the proposal, generally arguing that the state was duplicating FCC regulations and that those FCC rules already assured that workers and the public were protected from excessive RF radiation. They saw the fees as nothing more than a new tax on the businesses and people of New Jersey.

The first ham to testify was leadoff witness Vivian Lopez, N2NZN, a lawyer familiar with the state regulatory process. She challenged the DEPE's authority to enact the regulations at all, charging that the law under which they were proposed had been written to deal with threats from nuclear radiation, not RF.

"If the department seeks to stretch that authority as a basis for regulating whole industries," Lopez testified, "then the enabling legislation ought to first be amended to specifically grant that power."

Imlay and Moseson appeared on behalf of the ARRL. In his testimony, Imlay cited numerous court decisions, dating back to 1927, giving the federal government "exclusive" and "expansive" authority to regulate radio and TV. He also noted that the FCC had categorically exempted amateurs from routine reporting on compliance with RF exposure standards, and that RF safety questions are included on amateur license exams.

Moseson testified as to the likely impact of the regulation on Amateur Radio in New Jersey, explaining that annual fees of $1000 or more for a typical station would simply force most hams off the air. Without ham radio, he said, the state would lose a vital emergency communications resource as well as endanger millions of dollars in federal emergency management aid, since backup communications abilities would be lost.

Measurements difficult

Moseson also explained the difficulty of taking measurements at a typical ham station, which can operate on many frequencies with infinitely variable power levels and radiation patterns, as well as the stifling effect that the regulation would have on station changes and experimentation.

Finally, the ARRL representatives reminded the department that FCC rules limit state and local regulation of amateur antennas to the "minimum practicable" extent required to achieve their purposes, and that those regulations may not preclude amateur communication. Applying the proposed regulation to hams, the League argued, would effectively preclude amateur communication and would therefore be in violation of FCC rules.

The League's testimony concluded with a request that, if the department decides to enact the regulation, then, at the very least, it should specifically exempt any RF source that is "a component of a federally licensed station in the Amateur Radio Service," as defined by FCC rules.

There also was testimony from representatives of broadcasters, telephone companies, land-mobile users and municipal government. One municipal spokesman was Bill Sohl, President of the Mt. Olive, New Jersey, town council (as well as being K2UNK and an ARRL Local Government Liaison). He told the panel that, if his town applied the reasoning behind the proposed regulation to its police department, then each motorist in the town would have to register and pay a fee to the town to cover expenses in case the motorist violated a traffic law and a police officer needed to take time to write a ticket.

At the end of the hearing, department officials gave no indication of how they might respond to the criticisms leveled at the proposal. At the request of several witnesses, however, they did extend the deadline for written comments from January 20 to February 22. A final decision on the proposal must be made by December 6, 1994.

One week after the hearing, a new governor took office and appointed as DEPE commissioner a state legislator with a reputation for trying to accommodate business as well as environmental concerns. Moseson said he and others plan to work with the new state leadership.

(This story was reported by ARRL Northern New Jersey Section Manager Rich Moseson, NW2L.)

League seeks primary 902-MHz slots

The ARRL has petitioned the FCC to provide the amateur service with primary allocations from 902 to 904 MHz and from 912 to 918 MHz, with certain geographic limitations.

Amateurs already are allocated from 902 to 928 MHz on a shared basis with several other services, including government radio-location; fixed and mobile services; industrial, scientific and medical (ISM) equipment; and various nonlicensed, low-power, "Part 15" devices.

Last spring, the FCC proposed to expand Automatic Vehicle Monitoring (AVM) systems in the 902 to 928 MHz range, and also has suggested permitting non-government wind profiler systems in the band. In June 1993 the ARRL said that further study of the band was needed.

In its January 13, 1994, petition, the ARRL said that these FCC

proposals jeopardize Amateur Radio use of 902 to 904 and 912 to 918 MHz, segments that the League said have not interfered with AVM systems and which are critical to the development and continuation of specialized communication techniques by amateurs.
The ARRL petition said that since the 902 to 928 MHz band was made available to amateurs in most of the US in 1985, its use has grown, particularly for weak-signal work and television; the two primary segments sought by the League would be aimed at those users.
The League mentioned, again, that two current Commission agenda items -- the first an inquiry into placing non-government wind profilers on the band (in Docket 93-59), and the second, a proposal to expand AVM systems in the band -- were a departure from the US position at the 1979 World Administrative Radio Conference, at which amateur access to the band was first addressed.
The League said that the adoption of the requested primary segments for amateurs would not "prejudice" the development of AVM systems or wind profilers.
The ARRL petition said that the FCC had considered the availability of 902 to 928 MHz to amateurs in its decision to take 220 to 222 MHz away from them.
And the League said since amateurs now rely more and more on the 902-MHz band, a significant reduction of its usefulness would "constitute a breach of the Commission's previous assurances" of continued availability.
The League cited as an example the Los Angeles area, where a local band plan works around AVM operations. Use of the 902 to 903 MHz segment is "heavy," the League said, with not only weak-signal operation there, but point-to-point links and repeater inputs as well. Similarly, 912 to 918 MHz is heavily used, the League said, for digital wideband, ATV simplex, and ATV repeater operation.
This local band plan is an example of the sharing arrangements necessary in a crowded RF environment, the League said, and it points up the need for the primary amateur allocations being sought.
The exceptions to the primary allocations for amateurs that the League seeks in its petition would be restrictions in certain parts of Texas and New Mexico, where such restrictions already are in effect to protect government operations.
ARRL Board of Directors meeting highlights
The ARRL Board of Directors met in Rocky Hill, Connecticut, on January 21 and 22, 1994. The following is a summary of meeting highlights. Details will appear in March QST.
* The Board re-elected its present slate of officers: President George Wilson III, W4OYI; First Vice President Rod Stafford, KB6ZV; Vice President Jay Holladay, W6EJJ; Vice President Tom Frenaye, K1KI; International Affairs Vice President Larry Price, W4RA; Treasurer Jim McCobb, K1LLU; Secretary and Executive Vice President David Sumner, K1ZZ; and Chief Financial Officer Barry Shelley.
* Elected to the Executive Committee were Rocky Mountain Division Director Marshall Quiat, AG0X; Hudson Division Director Stephen Mendelsohn, WA2DHF; Delta Division Director Joel Harrison, WB5IGF; and Great Lakes Division Director Al Severson, AB8P.

* An interim report and band plan recommendation of an ad hoc committee was adopted, looking to the early implementation of the expected allocation of 219 to 220 MHz for limited amateur use.
* The 1994-95 ARRL budget plan was adopted.
* The Volunteer Resources Committee was tasked with studying the feasibility of a system of technical awards to recognize achievement in fields ranging from design and construction to the creation of innovative communication systems, and to develop appropriate criteria.
* The League will file a petition for rule-making seeking to remove overly restrictive rule provisions concerning the use of spread spectrum techniques, and an ad hoc committee was created to recommend technical standards.
* The Membership Services Committee will study the possibility of relocating the
40-meter Novice subband. The committee will report back to the Board in July.
* The Board approved a revision of the ARRL/Red Cross Statement of Understanding.
* ARRL Headquarters will begin to notify members of license expirations, and will include a Form 610 to effect license renewals.
* The Administration and Finance Committee will study the feasibility of offering group legal defense insurance to ARRL members to cover legal costs in antenna cases and RFI lawsuits.
* The ARRL Letter will be offered to affiliated club newsletter editors free of charge, on a trial basis.
* The Administration and Finance Committee was asked to investigate the development of a multi-media production capability for Headquarters, to keep pace with the changing technology in today's personal computing revolution.
* Perry Williams, W1UED, was commended for 40 years of dedicated service and congratulated on the occasion of his forthcoming retirement from the Headquarters staff, in April 1994.
BRIEFS
* Beginning March 1 the FCC will accept only the new version of its Form 610, as explained in February QST (page 103). March QST "Exam Info" reprints the new form and will have further information on its use. Use of the new form applies to everyone, from new licensees to renewals, call sign changes, etc.
In early February the ARRL-VEC's newsletter, VE Express, will include a full-size version of the new Form 610. The ARRL-VEC also will mail bulk quantities of the new form to all of its 650-plus "field stocked" VE teams. The ARRL-VEC will recommend that its VE teams begin using the new form on February 12, to allow for sufficient turnaround time.
* In 1993 ARRL members sent about 7.25 tons of QSLs to the ARRL Outgoing QSL Service for shipment to bureaus overseas. This was 2,182,000 cards for DX destinations. The US Incoming QSL Bureau's volunteers sorted just over two million cards in 1993, as well.
Information about these services is on pages 98 and 99 of QST for January 1994.
* Tucson Amateur Packet Radio has scheduled its annual meeting for

March 4 through 6 in Tucson at the Best Western Inn at the Airport. The annual meeting will feature presentations and papers on several new hardware projects, discussions of projects in progress, hands-on demonstrations, and a minisymposium on the future directions of amateur packet radio. For more information contact Program Chairman Keith Justice, KF7TP, at 602-461-8687.
And TAPR has a new address: 8987-309 East Tanque Verde Road, No. 337, Tucson AZ 85749. Their voice mail system number is 817-383-0000; the fax number is 817-566-2544.
* Shack in the USSR: Tandy Corp. has opened its first Radio Shack in Russia. The Moscow store, which officially opened January 14, is "identical in look and layout" to stores in the US, according to Tandy. The store is franchised to the Trident Group, a Florida-based international distribution company, and is managed by Trident A/O, a Russian company.
* The American Digital Radio Society has acquired the RTTY Digital Journal, and will retain Dale Sinner, W6IWO, as its editor. For more information on the ADRS and a copy of its newsletter, write to ADRS, Box 2465, New York NY 10185 (BBS at 212-698-2102).
* Fred Doob, AA8FQ, will once again run, for ICOM and charity, in the Los Angeles Marathon on March 6. As in the New York Marathon last November, Doob will operastore, with his son Don Busick, K5AAD, until his death.
* Two more shuttle astronauts have received their amateur call signs: Charles Bolden is KE4IQB, and Ronald Sega is KC5ETH. Both are members of the STS-60 crew, scheduled for a February 3 lift-off, and are Technician class licensees. Russian cosmonaut Sergei Krikalev, U5MIR, is also an STS-60 crew member.
* NASA Television has moved to satellite Spacenet 2, transponder 5, C Band, 69 degrees west longitude, on 3880 MHz, horizontal polarization, with audio on 6.8 MHz. During space shuttle flights NASA Select TV occasionally carries Shuttle Amateur Radio Experiment (SAREX) activity.
* The Foundation for Amateur Radio will administer 49 scholarships for the 1994-95 academic year to assist licensed amateurs who are students. The awards, from $500 to $2000, are available to full-time college students, including those who have been accepted for 1994. Additional information and application forms should be requested before April 30, 1994, from FAR Scholarships, 6903 Rhode Island Ave., College Park MD 20740.
* In the days following the earthquake near Los Angeles on January 17 you may have heard or read about an experimenter named Jack Coles, of San Jose, California. Coles listens to the 10 to 12 kHz range for 0.5 to 2 second pulses and is one of a group of experimenters who think this may be a way to predict earthquakes. Coles says he's always been interested in radio and is currently studying for an amateur ticket.
10 Years Ago in The ARRL Letter
The ARRL Executive Committee authorized the League's counsel, Chris Imlay, N3AKD, to file friend of the court briefs in two local cases involving Amateur Radio. One of them, involving John Thernes, WM4T, was ultimately successful, and has been cited in later cases, including

Pentel v. Mendota Heights (see accompanying story).
The first Shuttle Amateur Radio Experiment (SAREX) video was unveiled, produced by Roy Neal, K6DUE. The 28minute film featured the first SAREX flight, of W5LFL on STS-9. This film was superseded by one titled "SAREX," a general-interest film that the ARRL still widely circulates to clubs, and another, "Ham Radio in Space," which concentrates on how schools can use the SAREX program.
The League was meeting informally with the FCC to promote Amateur Radio third-party message service at the Olympic Games that summer in Los Angeles, although it was unclear if security concerns would allow stations to be set up in the Olympic Village.
ARRL membership rose in 1983 from 124,000 to 126,000, a 1.6% increase, after a 12.5 percent decline in 1982 following a dues increase. (League membership growth in the US for 1993 was 2.05 %).

Well I've tried just about everything I can think of...I'm attempting to use the PK-232 with my TS-850.....problem is an awfull lot of rf getting back into the Kenwood. I've tried shielded cable, additional grounding straps between both units, shorter lengths of cable - no luck. Anyone have a clue as to how to eliminate the unwanted rf? Seems I might of saw a posting here addressing this very problem but not sure. Thanks in advance for any replies, 73...Roger/N5IFH.

1043. FTP site with Mods!!! et al.

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-03 04:12:26 UTC
From: segigot@students.wisc.EDU
Message-ID: <199402030412.WAA09375@audumla.students.wisc.edu>
Source record: 271593

My modem isn't working, but I have seen that people are looking for a FTP site with mods. Well, the other nite my friend and I were playing with his modem and I found a whole bunch of mods at:

garfield.catt.ncsu.edu
in
pub\???
I forget the directory; it was a while ago. There were probably plans for 40 or so radios; once again I'm not sure. Only word of caution: they only allow 10 anonymous users, so you might have fun trying to get in.

Point 2: the other night I was scanning with my 2m HT and on 145.990 I heard some squawking and beeping, as well as VV7VW, in British Columbia. I am in Madison, WI, and that's true VHF DX if I ever heard it. Granted, the band was up, but I'm still wondering...is that a satellite frequency?

Point 3: I got my radio late in December, and brought it home from school with me to Green Bay, WI. I noticed that I always got a static signal on 146.760. There is a repeater on that freq in Appleton, 30 miles away, but that wasn't the source because I could key that repeater up while the static was being recieved. I noticed the same problem in Madison, where I go to the UW. There is a repeater on 146.760 here, too, and I can use it. Is this chronic interference unique to my radio, or is the HTX-202 susceptible to QRM on this freq?

Point 4: (I said it was an FTP site, et al.) There will be a Hamfest/VE test session in Green Bay, WI on February 20. It will be at Ashwaubenon High School, from 8:00 am until the middle of the afternoon. Admission is $3 at the door. Proceeds go to help the AHSTC put up their new 2m repeater on 147.075 +, P/L 107.2. Talk-in will be on the 147.075, and if that's not up it will be on 147.270 + P/L 107.2 and 146.520 simplex.

>I too have a pile of modified commercial gear that I use. I can tell you
>horror stories about some of *those* rigs, too. As for desense on the
>FX-440, can't that be solved with an outboard bandpass filter?

I'm curious about your horror stories on modified commercial gear. People frequently use the term "convert" or "modify" when talking about commercial land-mobile gear and ham radio. Now, I know someone who moved a VHF-High Band GE Mastr Exec II to 220Mhz, _that_ required modification. However, I've never had to actually modify any radios like that. I try to buy the radios on the correct split, and then put them on frequency using the tuning instructions in the service manual.

Of the radios I've tinkered with, all of the land-mobile gear was extremely good. If someone dinks heavily with the radio, sure, it may not work well, but I've never had to dink heavily with one. The closest I may have come was swapping the capacitors in a Micor VHF High-band exciter to make it a low-split exciter, but that used standard values from the service manual and works like a charm.

Try sharing your horror stories where you tuned and operated land-mobile gear in accordance with the service manual...

>>Well, I've pointed out three radios that are far superior to the

>>Ramsey FX-146 and cabinet.
>
>Yup, me too. Sometimes, though, it's tough to find surplus commercial
>gear. And some of that gear requires a microscope and tweezers to work
>on. In both cases, the FX kits are a viable alternative.

Hmmm... not even my MCX100s require microscopes and tweezers. As for availability, call John Lansdale and ask for his price sheet. He sells VHF Lo-band (for 6m) Micors, complete with control group, for $75+shipping.

>>The method to generate useful SS is either by DDS frequency hopping
>>or I/Q modulated carrier. PLL approach to SS is doomed to relatively
>>few hops/second and/or considerable "bounce" in the desired frequency.
>
>Who said anything about *useful* ? I said I want to *experiment*. Maybe
>I want to find these things out myself? If I wanted commercial grade SS

>I'd buy a pair of WaveLAN boards.

Well, you did say you wanted to experiment with SS. I _assumed_ you meant
actual, working SS. If you just want to generate a bunch of RF noise, have fun.
Somehow the response "who said anything about *useful* ?" took a chunk out of
your technical credibility. I guess we're in a flame war :-).

How about actually building a working SS link? How about looking at the
body of published material on such technology? Am I sensing just a tad
of NIH (Not-Invented-Here) attitude?

>>>It's a shame that the Amateur Experimental Service has turned into the
>>>Amateur Appliance Service.
>
>>It is a shame amateurs won't take advantage of readily available
>>high-quality surplus to use as a platform for experimentation and spend
>>considerable effort defending junk radios that don't even come up to the
>>performance standards of a Part 15 cordlesst telephone. :-)
>
>Ya, but you just backed up my point - it's not an experimental service
>any more...

Can you take a moment and explain how I've backed your point up? If
you think that repeating ancient expirements to verify that they indeed
fail is advancing the state of the radio art, I guess I'm backing up your
point. If you think taking a DDS synthesizer and integrating into a
UHF Micor to experiment with SS is operating an appliance, then, yes,
I'm backing up your point.

Buying some box of parts, soldering it together and asking for a radio
check on the local repeater is awfully close to appliance operating,
don't you think?

SYNOPSIS OF ACT

Solar activity was very low. No flares were observed
during the period. A new, small, but bright region was rotating
into view at N17E70 near day's end.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was mostly quiet to unsettled. A
period of active conditions at mid-latitudes and minor to major
storm conditions at high latitudes was observed form 0900Z to
1500Z. The increase may be related to a small coronal hole

which was in a favorable position.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to unsettled for the next three
days.

Event probabilities 03 feb-05 feb

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 feb-05 feb

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
Similar conditions are expected over the next 72 hours, through
05 February inclusive.

and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Around 1980 I was a student at UNSW. One of the UNSWARS members had
gained access to computer time on a PDP-11, and the necessary interfaces
to make a RTTY repeater. We applied to the WIA for repeater approval,
including a document which explained all about the ASCII code.
We were refused permission for any kind of repeater running ASCII. The
official response was simply "NO", the rumour was that WIA disposals
had a lot of metal monsters that they still wanted to get rid of.
I suspect the actual reason was just that those in control didn't want
to see anyone doing anything different or innovative.

: : : meantime technology moves on.

: : So you're saying that you *LIKE* intermod?

: : :-)

: Rich, the problem is that todays HAM is a buyer not a builder. Thae
: closest thing to this now days is a loose radio and a reliable set of
: mods. Is this truly HAM radio, that is the true question.

Well, personally, I don't considering building to be a necessary
part of amateur radio, even though I enjoy it a great deal. Heck,
whatever it takes to enjoy the hobby, even if it's just walking
into a store and pointing to a rig, is just fine. However, I'm just
astounded at the way that people will purchase low-performance
equipment at a high price, just because they think that a clock, 99
memories, and the ability to listen to the local airport are
reasonable items to add to a HT. I mean, come on, what's the point of
all the toys when you can't use any of them whenever you come in the
range of a paging tower? Meanwhile, those of us with the inexpensive,
less glamourous rigs will still be happily chatting or packeting
away without a care in the world. :-)

> at such speeds ? That seems a mistery to me.

Practice!

Actually, that was how I learned Morse...listen to fast transmissions, write down as much as I could, and look for a pattern of letters I was missing. Then I'd concentrate on those for a while. Pretty soon I was getting them all, and at 15 wpm or so. I ran into another writing block at about 25-30 wpm that I've never overcome. I can listen and comprehend at 35 - 40, but can't get it down on paper much beyond 25.

Hang in there-you'll get it with persistence.

>features I am looking for in a message and solicit any feedback.

Well the features you listed are all very popular, but the point that I think you need to consider the most is the ruggedness of a portable. I have have a dozen HT since my carreer began and you can have the nicest radio with all the bell and whistles you want but if it breaks the first time you carry it then it is of no use to you. Also remeber that HTs are Hts and if you plan using it for all around talking from your home and work place and car, you will soon find out that irtt is a pain to carry cables and amplifier, speaker mikes and spare batteries.

Mobile are nice. I have both and I used to carry my HT everywhere, but found after a year or so that I really didnt use it that much. As a result I still have 2 hts, one on 220 Mhz and a dual band IC32At and I have had a smallest ones too, but if I have to take care of a radio like a human baby then, I find it a drag anyhow its your call but it pays to consider it along with all the features you are looking for.

good luck, Dino VE2DM dino.cam.org

We have an NBS time clock tuned to WWVB (or is it L?) which we use to calculate delta time adjustments to onboard satellite clocks when acquiring data from the NOAA satellites. This particular box even has an adjustment to allow for propogation delay - so the resulting time is accurate to at least a millisecond. It has a nice display on it too, which we use to set our watches!

We once had someone tell us that our NBS clock was off. They knew this because they set their time to their favorite AM station and they're always right...

Source record: 271608

>They're going to use the money saved to print up nice award certificates
>for all the hams who earn WAS while trapped in the traffic jam. :-)

yeah, but Gary, the Dayton guys always seemed to have trouble getting organized on mass transit. maybe they should 'qsy' to some place that can handle large crowds routinely -- say Orlando....not that the OARC would approve...8)

of course, maybe we should just get everyone organized to park at the mall -- "economic turmoil reigns! Salem Mall closed by invading hordes of radio hams...McDonalds makes emergency deliveries to restaurant after the entire food supplies were consumed by the horde..Noble Romans reported improved sales reached 'sluggish' levels over the weekend..residents report lamps glowing with power turned off, wavy lines on their TVs and strange thumping out of stereo and radio speakers..young children frightened..strange vehicles roaming the streets -- could they be operators of cat detector vans? are your cat licenses up to date? is it the end of the world? is Elvis there?"

maybe the hamfest should be at the mall...any old NCR warehouses unused? and has anyone found a use for the old Western Electric plant in Indianapolis? That place even has a very large parking lot AND a huge amount of space under cover and an International Airport that's on an Interstate and easy to get in and out of (unless Dayton's changed a bunch..)

maybe dayton needs another big event around september/october so having a large parking area at the Hara Arena would be more practical -- maybe the arena could be leased out to the Tonya Harding Physical Therapy Center for Injured Skaters.

Dayton may have had the "natural" for a large convention and has certainly worked to get this spot as the "big one", but maybe it's ripe for plucking given the constraints forced upon them by the area.

>For normal contacts QRP is just ham radio with less watts.
>
>but... don't find it that much of a difficulty or hardship.. OHHHHH
>think I will be shot for giving away well kept secrets.

No truer words were ever said.

Jeff's posting reflects my experience, too.

All this stuff about 'the antenna is the key to QRP' and 'don't try
it for your first rig' are really over-statements. Yes, when I took
my Argonaut to the local high-school and put it on their quad at
50 feet, I felt like a big-gun. But I made plenty of contacts on
my mediocre antenna, too.

If you're not getting contacts with five watts, something is wrong
which would really hurt you at 100 watts. Operating technique,
feed-line, band-choice, something.

Correct that, and you'll be back in business.

After all, it's only two S-units, maybe three. On CW that hardly matters,
unless you're 'way down already.

It works, really it does. (They'll never believe us, will they, Jeff?)

> a pacemaker, please reply to:

To Paul and any other interested hams:

I used to do part 15 subpart J testing at the same lab that Medtronic, one of the largest manufacturers of pacemakers, used. The lab would not tell m me the levels of rf that they exposed the pacemakers to in the chamber but I know what they had for amps and anntennas in the lab and I know that they were using greater than 10kw at 1 meter for hf frequencies and greater than 4kw at 1 meter for uhf.

You may be able to call up the manufacturers and obtain some information on their minimum rf acceptance failure.

With more and more people getting pacemakers, it might be a good idea for the ARRL testing lab to publish some information on pacemakers and rf so that if your next door neighbor gets a pacemaker, he doesn't try to get the city council to shut you down because he is afraid that the next time yu key up, it will stop his pacemaker.

Steve KA0VYB

Hey Gary, do you know what the Gov. minimums are???

>

Absolutely, get on the air and work the NR! It's a great way to help out Novices & Techs aspiring to upgrade (that's how I got _my_ General, anyways!). It's a great practice session for those aspiring Novices & Techs, too.

But for this one poor Advanced who hasn't touched CW in almost 2 years, the code speeds that some of these whiz-kids are working at are just too fast! I only wish I _could_ find somebody working at 4WPM!!! :-) :-)

Oh, one small hint to those of you who work the contest. If you're calling CQ, PLEASE send your callsign more than once! I was listening to one fellow the other night who was sending his CQ's like this:

CQ NR CQ NR CQ NR DE KE4xxx/N K

It took me three complete QSOs to finally figure out what his full call was, because he never sent it often enough for me (the fact that he was running at about 12WPM and I can't copy terribly cleanly above 10 didn't help matters much, either :) He worked one person at about the same code speed he was at, one person running down around my speed who was obviously using a straight key and equally obviously going too fast for himself, and one person running at something close to 15WPM. On KE4's next CQ, I finally got the last letters of the call confirmed. BOY am I out of practice on this stuff! :-)

ESPN runs the lumberjack championships every so often. You could tape them, but who has time to watch TV on Field Day?

Anyway, an axe or chainsaw works better than a floppy disk, but isn't it more effective to just shoot a wire over the top. Besides, it isn't right to chop down a bunch of trees, just to make a clearing for Field Day. I know it isn't called 'Forest Day,' but you don't HAVE to have a field.

Source record: 271617

I hafta agree with others that the traffic jam is going to be beyond description if no shuttle bus service is provided. Somehow the Hamvention organizers have to maintain some level of transport to outlying areas. I'm only one possible attendee, but I might consider not going this year if I don't have the abililty to use a bus to get to the site. For those who choose to drive, they will probably never get there and back because of all those extra cars on the road. I would be willing to pay a 3 day fee for unlimited rides to help defray the cost just to have the buses. Did anyone think of that as an option ? After paying for air fare to get to Dayton and $100 per night for hotels etc., what's a few extra dollars?

INTERESTED IN THE CURRENT SHUTTLE MISSION
The current mission has a number of interesting aspects: this first Russian astronaut to fly on a shuttle, the 100th GSFC managed Get Away Special payload, as well as planned Shuttle Amateur Radio Experiment activities.

The Goddard Amateur Radio Club (GARC) WA3NAN invites you to tune into Shuttle transmissions. As a public service to the Amateur radio community, the GARC retransmits space shuttle air-to-ground communications. During the STS-60 mission, Amateur radio operators, shortwave listeners, and those individuals with scanners can listen to these communications on the following frequencies:

3.860 MHz (lower sideband)
7.185 MHz (lower sideband)
14.295 MHz (upper sideband)
21.395 Mhz (upper sideband)
28.650 Mhz (upper sideband)

and

147.45 Mhz (FM)

I'm sure the recollections of 30 years ago are warm, nostalgic
memories, but they have nothing to do with the actual discussion.
My point is simply that one can take the $175 they'd spend to
buy a Ramsey kit, hunt around, and come up with a perfectly
useful radio. The mention of boat-anchor wide-band FM radios
is misleading; sure Micors are kind of bulky, but Custom MVPs
are small and MCX100s are even smaller. You can't criticize
the receiver performance, other than it often helps to add
a GaAsFET pre-amp to the radios which don't have a pre-amp.

As for learning, the service manuals go over the radio in
quite a bit of detail. They don't explain how to build it,
but they do explain the theory quite well. Everytime I say
this, Ramsey advocates change the subject. Even John Ramsey
changed the subject when I made this comment.

I use the FT240-77 ferrite toroid from Amidon to remedy rf getting into
things thru hookup cables. The 240 size is big enough to get even line cord
plugs thru it. Try to thread about 10 or so turns through the toroid with the
toroid ending up right next to the 850 (or whatever device you're trying to
keep the rf out of...works great with tv line cords!).
There is a mod to reduce the 850's audio data input sensitivity (that's the
input at the rear din connector), but I have found the choke to work well
instead. Bundle all the leads together, no need to have a separate toroid
for each cable. Amidon Assoc. ph# 310-763-5770.

Source record: 271626

Thanks for the email suggestions. I finally hung the scope on pll1, then pll2, etc. I had to look at the scope for up to 5 min to catch a unlock... kind of a long time for a fast oxidizer. The results were: CAR stayed up, pll1 stayed up, but pll2 failed. The inputs to pll2 stayed up. Upon inspection C68, a coupling cap in the vco of pll2, had a cracked solder connection. It was hard to see, and hard to determine if it was cracked all the way around. Anyway, resoldering the joint fixed the problem. I wonder if the often reported cure of unpluging and pluging connectors results in an apparent cure due to the mechanical flexing of the board. Someone complained about the phenolic boards. Do they cause these cracked joints over time?
So I'm happy now.......for awhile.

>even replacing those cables with RG-223.

9913 isn't the answer to all problems. An 80m run of 9913 at 1.6GHz will have 10-12dB of loss. 7/8" Hardline will have more like 5-7dB of loss. In comparison, RG-58 has maybe 50dB of loss in the same length.

However, 9913 is a reasonable choice, especially when combined with a mast-mounted pre-amp with just enough gain to overcome feedline loss. Since this is a receive-only application, this is likely the best way to go.

Heh. Interesting thought. No, I don't believe it's necessary to
use the belt-clip. I never put the clip on mine, and use it at
high power with a 13.8V source all the time. It gets warm,
but not terribly hot. The back case is metal, and that is
probably all the heat sink it needs.

Paul,

The ARRL doesn't have much information on pacemakers. EMC Test and Design, April 1993, ran an article entitled "EMC History of Cardiac Pacemakers." This is not available through the ARRL Technical Information Service, but if you send me your postal address, I will make you a personal photocopy.

From the article, it appears that most pacemakers average about 200 V/meter immunity, a level rarely seen in lower-power amateur installations.

: flabbergasted, since I thought QEX was for tech stuff.

Don't worry, Galen. The overwhelming response to my editorial question was: keep QEX technical. Which is what I expected and what I will do. It was nice, though, to find out that there *are* readers out there who care! (Of course, there were a few responses supporting the "too technical" point of view. I'm afraid those readers are going to be disappointed. Oh, well.)

: I would like to see more technical articles in every ham magazine.

Me too. But I recognize that ham radio is a multi-faceted hobby. I don't want to ram my interests down others' throats any more than I want theirs rammed down mine. Fortunately, I don't have to read *National Contest Journal*, which is good since my interest in things contesty is near zero. Likewise, I don't expect that all hams will want to read QEX. My view is that we should strive to make wanted material available, but not force-feed it to people who don't want it. And that's what we are trying to do.

Well, you have checked many of the "connection" type things. It sounds
like the bad connection is inside one of the ICs or other components.
I do have one off-the-wall suggestion to try first, though. Many of the
pc boards rely on thier mounting screws to get a good ground. It is
probably worth checking these to make sure they are tight and that
the pc board is making good electrical connection. Do NOT tighten
all the screws inside those little metal cans, though! Those are
aligment screws; they do not need to be tight. :-)

A year or so ago I fixed a '940 that had a bad IC socket on the
the main microprocessor chip. That unit had developed all sorts
of flaky problems. It was a pain in the neck, but I managed to get
the old socket out and put in a new one. Do NOT remove an IC socket
as your FIRST pc-board solder experience; get some practice first.
Solder-wick or a desoldering tool makes the job a lot easier.

After that, I suggest that you purchase a can of "freeze spray", available
from most mail-order electronic distributors or from the electronics
jobber that supplies your local TV repair shop with parts.

Turn it on and let it warm up. Once it starts working fine,
use the spray to cool down major sub-assemblies, one at a time. When
the problem returns, you have found the bad board. Let it warm up
and start working again. Then, cool down the components one at a time.
When it acts up again, you have found the thermally intermittant
component.

Good luck.

>
>Every year the Hamvention comes off with (apart from the $#%@!% weather here)
>no major hitches.

You are absolutely correct.

I am constantly amazed at how well the Dayton Hamvention works, every time, every year. The DARA people have learned how to do the job well.

Given the natural tendencies of hams toward anarchy and chaos, the Hamvention is well organized without becoming overly regimented.

I think they will think through the bus situation carefully. Perhaps they can work out special routes and rates with their local transit people. I just hope the local transit authority management is progressive enough to cooperate, everyone will win.

Parking has improved. Last year was the best year for parking in some time. Yes, it now costs a few bucks, but then still have people who buy a flea mkt space in order to have a place to park. (I'd like to see this dealt with more firmly. There's always a shortage of flea mkt spaces.)

Now, the one thing the Hamvention committe has not been able to properly organize is the weather. Last year was one of the worst years for weather at Dayton in recent memory. Hmmm, maybe we are overdue for a good weekend this year...

Rule of thumb at Dayton:
One day you freeze.
One day you get very wet.
One day you get sunburned.
Its figuring out which will be which ahead of time that is an art.

Good morning. It's Sunday the 6th of February and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- RSGB member, Andy Watts, G4VIW, is awarded the MBE in the New Years Honours List; A correction to the QSL sub-manager for the GM2 callsign series address has been advised; Lists of special event stations for the Guides Thinking Day on the Air now available from RSGB Headquarters; Your chance to help us to improve the GB2RS news broadcast; Winners of the VHF 144MHz Trophy and the 144MHz CW Marconi Contest.

Firstly, our congratulations to another RSGB member Andy Watts, G4VIW. who received an MBE in the 1994 New Year Honours list for services to plumbing. Andy is Chief Executive and Secretary of the Institute of Plumbing based in Hornchurch, Essex.

Next, we have been advised of a correction to the RSGB QSL Sub-Manager details for the GM2 Callsign Series and to the address which is printed in the RSGB Callbook. The GM2 series should read, GM2AA to GM8ZZ. The Sub-Manager is James T A Johnston, GM3LYY, and his address should read: "The Dolphins", 2c Montgomerie Drive, Fairlie, Ayrshire. KA29 0DZ.

The Guides Thinking Day on the Air will take place during the weekend of Saturday the 19th and Sunday the 20th of February. A list of participating British GB Stations and of countries permitting Third Party Greetings Messages for this event is available from RSGB Headquarters on receipt of a Self Addressed Stamped Envelope, size A5 or larger. The address is: RSGB Lambda House, Cranborne Road, Potters Bar, Herts, postcode EN6 3JE. Please mark the envelope 'TDOTA 1994 List'.

On Tuesday the 8th, the RSGB Exhibition and Rallies Committee will be meeting in London.

In an effort to make the GB2RS News bulletin more interesting, we are seeking more news stories from amateurs throughout the UK. The most suitable stories refer to events which have taken place during the previous week, or which are about to happen during the following week or two. Apart from club and rally information, we would be pleased to receive operating news (have you worked anything really interesting this week?), news about achievements in amateur radio (has your club presented a trophy recently?). Perhaps you have news of repeaters, beacons or packet stations which are newly operational, are temporarily or permanently off the air, or are providing improved service. We would also like to hear about DXpeditions, or contesters who are going to rare parts of the UK. If you are using a GB or club call for a special event, send us a few details for the news broadcast. News items should be sent to RSGB, Lambda House, Cranborne Road, Potters Bar, Herts EN6 3JE, marking the envelope

"Urgent news for GB2RS". The deadline is noon on the Tuesday preceding the Sunday broadcast.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO. From the Philippines, G4ZVJ will be active as DU/G4ZVJ from Tuesday the 8th of February for one week. From Fiji, JI3ACL will sign 3D2CL from Thursday the 10th to Wednesday the 16th of February on all bands 10 - 40 metres on CW and SSB. 20 metres. From Ariosto de Souza, PT2BW will use the special callsign PV2A for the EAWW RTTY Contest on Saturday the 12th and Sunday the 13th of February. And from Mexico, NE8Z/HC1MD will sign XE1/NE8Z from Puerto Vallarta from Sunday the 13th to Sunday the 20th of February. Activity will be on all bands 10 - 160 metres, including the WARC, on CW and SSB. On CW check 5 and 25 up.

Rally news now and we know of only one event for today, Sunday the 6th of February: The South Essex Amateur Radio Society Radio Rally which is being held at The Paddocks, Long Road, Canvey Island, Essex. Right at the end of the A130. Doors open at 10am. The disabled visitors' parking area is near the main door entrance. Features the usual trade stands and a bring & buy stall. Refreshments are available and talk-in is on channel S22.

Now the Rallies for next weekend, and we know of three for Sunday the 13th of February:

The Welsh (Barry) Mobile Rally is to be held at the Barry Leisure Centre, off Holton Road, Barry. Doors open at 10am, 9.30 for disabled visitors. This event features trade stands and a bring & buy stall. Refreshments will be available and the talk-in will be on 145.550MHz, channel S22. Further details can be obtained from Mike, GW8CMU on 0446 711426.

Cambridge & District Amateur Radio Club Radio and Computer Rally is to be held at Addenbrookes Hospital Ambulance Station, Cambridge. There is easy access from the M11, junction 11 and the A45 via the Ring road. Doors open at 10.30am. The event features trade stands and a bring & buy stall. Refreshments will be available and talk-in will be on channel S22. Bookings and further information can be obtained from George, G0OEL on 0954 719273.

Northern Cross Rally is to be held at the Rodillian School on the A61 between Leeds and Wakefield, near the junction of the M1 and M62. Doors open at 11am, 10.30 for disabled visitors and bring and buy vendors. Event features over 60 trade and group stands and a bring & buy stall. Morse Tests are available on demand, please remember to bring two passport size photographs. Also there will be the RSGB Propagation Studies and Planning Committee stands and the Wakefield and District Radio Society with some new Morse test practice aids and RSGB books. Refreshments will be available and talk-in will be on channel S22 and via GB3WU. Further details can be obtained from Dave, G0FLX on 0532 827883.

Next some dates for your diary:

The 1994 RSGB VHF Convention is to be held at its usual venue, Sandown Race Course, Esher, Surrey on Sunday the 20th of February. See January's RadCom for full details of the comprehensive lecture programme. Note that this event is

being held much earlier in the year than usual.

The 1994 RSGB London Amateur Radio and Computer Show is to be held during Saturday the 12th and Sunday the 13th of March, at the Lee Valley Leisure Centre, Picketts Lock Lane, Edmonton, London. This is the usual venue, but with a new name. February RadCom contains full details of the comprehensive lecture programme. This event is being run by RadioSport Limited, in conjunction with the RSGB and the Southgate Amateur Radio Club. Morse Tests will be available on demand, but please remember to bring two passport size photographs. There will be no RSGB National Convention this year so the Society will be putting on a larger stand at the London Show.

HF contest news now:

The last of 3.5MHz RSGB LF Cumulative Contests takes place today, Sunday, the 6th from 1600 to 1800 UTC. December's RadCom, page 84, gives detailed information on all of these LF Cumulative Contests. The RSGB 1.8MHz CW Contest takes place from 2100 UTC on Saturday the 12th to 0100 UTC on Sunday the 13th. See August RadCom page 81 for further details. The PACC Contest and the EA RTTY Contest both takes place during next Saturday the 12th and Sunday the 13th of February. The BYLARA Contests are scheduled to take place during Thursday the 10th from 1900 - 2200 UTC and again on Saturday the 12th from 1000 to 1300 UTC. For further details of the last three mentioned see February's RadCom, page 19.

Next some VHF contest news:

First we have some results through for some of the VHF Contests held during 1993. These have only just arrived into the office and the full results will be published in RadCom as soon as possible.

In the 144MHz Trophy Contest held in September 1993, the winners and runners up for the various sections are as follows:

In the Open Section the winner was GU4APA/P with 16,465 points, with G4IVX/P second with 11,713 points. In the Fixed Station, Single Operator section the winner was G4PIQ with 9,945 points, with G6HKM as runner up with 3,604 points. In the Portable Station, Single Operator section GM4ZUK/P came in first with 8,008, and GW4BVY/P came second with 7,266 points.

In the 144MHz CW and Marconi Contest held in November, the winners and runners up were as follows:

In the 24 Hour Single Operator Section G4PIQ came first with 70,289 points and G4OUT was second with 14,138 points. For the 6 Hour Single Operator Section the winner was G3JRM with 14,856 points and G3JJZ, was second with 6,498 points. The winner of the 24 Hour Multi-Operator Section was G4XBF/P with 78,350 points, with GM4VVX/P coming second with 630 points. In the 6 Hour Multi-Operator Section G0FBB/P with 22,255 Points and G0PNT with 12,934 points came first and second respectively..

Now we have news of contests taking place within the next week.

The RSGB 432MHz Fixed, AFS and Listeners Contest takes place today Sunday, the 6th of February, from 0900 to 1500 UTC. There are three sections:- Single operator fixed, Multiple operator fixed and Listeners. The next RSGB 70MHz Cumulative Contest is next Sunday the 13th of February, from 1000 to 1200 UTC. There are three sections:- Fixed station single operator, Open and Listeners. See December's RadCom page 83 for details for both VHF events

And now the solar factual data:

The period from the 24th to the 30th of January saw the more active side of the sun looking our way, which was accompanied by some flare activity. A series of flares occurred from the 25th to the 28th, ranging from an M2.7/1B on the 27th, down to an M1.1 on the 28th. There were a number of SIDs Sudden Ionospheric Disturbances particularly on the 29th, but they only lasted a short time. The sunspot indices generally declined over the period and meaned about the 70s. Solar flux levels also declined from 132 on the 25th, down to 99 by the 30th, giving an average of 118 units for the period. The 90 day flux mean on the 28th was 105 units. The geomagnetic Ap indices started the period being very quiet with an Ap index of only 3 on the 24th. But due to the passage of a coronal hole, levels quickly rose to a sub storm of 26 units on the 26th, which affected mainly high latitudes, and by the 30th levels were back to just unsettled. The period averaged an Ap of 13.5 units. The state has been 'nil nothing of any note to report' all the period. The daily averages of the aa indices as supplied by the British Geological Survey for the period, the 18th to the 24th of January were 22.8 nanoTeslas. Over the period the daily levels declined from unsettled, about K4, down to quiet of only 7.2 nanoTeslas, K1 on the 24th, with some periods down to only 2 nanoTeslas. The X-Ray flux has remained reasonably high and was up to B4.4 on the 25th and did not drop below 4 until the 30th, when it declined to B1.5, giving an average of B3.6 for the period.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers as reported by Meudon averaged 9.0MHz, though the 26th was up to 10.2MHz. The daily highs are now centred around mid-day. The darkness hour lows averaged 2.9MHz, hardly varying day to day, and are centred around 06.00 hours. There were a few periods of Spread F and other phenomena but they only lasted 2 or 3 hours.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 7.3MHz and the darkness hour lows 2.5MHz. It is not all gloom - we have just heard that the new ionosonde installed at RAL Chilton is now being tested. It is intended that the new ionosonde data will be made as comparable as possible to the old Slough one. If all goes well the calibration and testing should be complete by about the summer.

And lastly the solar forecast:

This week, the quiet side of the sun will be looking our way. Solar flux levels are expected to be about the 90s, and the geomagnetic activity is expected to be unsettled, with Ap indices up to about 20 units. The daytime ionospheric MUFs in the south are expected to be about 24MHz, with north/south

paths being possibly up to 29MHz. The darkness hours lows are expected to be about 9MHz with again north/south paths up to 14MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 U K and G7 R P series, and Novice calls in the 2 0 A H and 2 1 C N series.

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

Next, the local news.

NEWS FOR THE SOUTH EAST

Meeting for Monday the 7th of February:

Surrey Radio Contact Club has a talk entitled 'Home Construction of Test Equipment' by Bob, G3OOU. For further details contact Berni, G8TB on 081 660 7517.

Meeting for Tuesday the 8th of February:

Stevenage and District Amateur Radio Society has a 'General Evening', discussion, also 'On the Air' and Morse practice. Details from Neil, tel: 0438 350882.

Meetings for Wednesday the 9th of February:

Bracknell Amateur Radio Club has a Bring and Show evening. Details from Steve, G4AUC on 0344 420577.

Cheshunt and District Amateur Radio Club has a talk on 'DX from Andorra' by Chris, G8AMG. Details from Roger, G4OAA on 0992 464795.

Darenth Valley Radio Society has a talk 'The Kent IP Group'. More details from Len, G0HRD, tel: 0474 703322.

Dover Radio Club has a 'Questions and Answers' evening chaired by G7NOR. For further details contact Mick, G7NOR on 0304 825030.

Farnborough and District Radio Society has a talk on 'PMR Systems' by G4WGX. For more information telephone 0252 715765.

Grafton Radio Society has a talk on 'Experiences from Hong Kong' by Bill Guest. Further information from Rod, G0JUZ, tel: 081 368 8154.

Worthing and District Amateur Radio Club has a talk entitled 'Packet' by G8VEH. For further details contact G4GPX on 0903 753893.

Meetings for Thursday the 10th of February:

Colchester Radio Amateurs has a talk entitled 'HF Construction' by Peter, G0DZB. Further details from Mike, G4YJN on 0206 738189.

Edgware and District Radio Society has a talk entitled 'Worked All Britain' by Rob, G4OBE. Details from Rod, G0SQL, tel: 081 204 1868.

Shefford and District Amateur Radio Society has a talk entitled 'Top Band DF' by Stewart, G3RXQ. Contact Paul, G1GSN on 0462 700618 for further details.

Southgate Amateur Radio Club has a talk on 'An Introduction to 24cm ATV' by Adrian, G0OJY. Further information from Brian, G0MEE on 081 360 2453.

Vange Amateur Radio Society has a talk on 'Aerials - Noise Phasing' by Robin, G3JWI. Contact Doris on 0268 552606 for further information.

Meetings for Friday the 11th of February:

Clifton Amateur Radio Society has a talk entitled "What's in a Computer". The club now meets at Kidbrooke House Community Centre, 90 Mycenae Road, London, SE3 7SE. Further details from Keith, G4TJE on 081 859 7630.

Hilderstone Amateur Radio Society has a talk on 'The History of the Service and The Channel Navigation Information Service' by Eric Musson, HM Coastguard, Dover . For further details, telephone 0843 869812.

Itchen Valley Amateur Radio Club has an 'Open Meeting'. Contact Les, G3ABA on 0703 732997 for details.

Medway Amateur Receiving & Transmitting Society has a Construction Contest, any item 'relating' to radio. Further details from Gloria, G7OVI on 0634 710023.

NEWS FOR SOUTH WEST

Exeter Amateur Radio Society Club has a new venue and now meets in The Moose International Centre, Blackboy Road, Exeter. For details contact Ray, G3YBK 0392 78710.

Meetings for Monday the 7th of February:

I'm not sure who has been posting those nice testing oppertunities(sp)
list, but.. I am planning on taking a few friends to the Decatur. Illinois
test this Sunday (2-6-94) but I lost the phone number of the person in charge,
and I need an address. If someone has the current list, could you please email
it to me? Time *is* important on this one...

Thanks in advance,
Andrew (N9KET)

1091. Could you help me?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-05 10:22:42 UTC
From: h8807817@hkucc.hku.hk
Message-ID: <1994Feb5.182242.1@hkucc.hku.hk>
Source record: 271541

I understand that this may not be the right news-group for me to post in the message below and I apologise for any troubles caused to you. But I do need the co-operation and help from people of any displines from any part of the world!

You are invited to join my little pilot study. All you have to do is just spending some time to read and fill in the questionnaire below.

I am doing a master thesis on the topic of envy (social-comparison jealousy) and I want to collect some information for my pilot study. Please complete the following questionnaire and E-mail it back to me (my address is in%"h8807817@hkucc.hku.hk").

This research studies the variety of response under situation of envy.
I hope you can understanding the following points before answering the question-naire:

1. The sole purpose of this questionnaire is to collect data for an academic research. I am NOT going to evaluate or judge your behaviours or characters via your answers. In fact, as reaction to emotion varies from one person to another, there are no standardized "model answer" for any questions in the questionnaire. Therefore, any of your answer can not (and will not) said to be right or wrong, moral or immoral, by anybody.

2. The data collected will be treated in highly confidential way.
Every returned questionnaires will be collapsed for analysis and the raw data will be erased as soon as possible. No individual analysis will be done on any one piece of questionnaire.

Therefore, please answer every questions as sincerely and seriously as possible, basing on your REAL experience and feeling in the past. Please feel free to E-mail any enquiry to me.

Thanks again for your kindest co-operation.

Everybody should have experienced the feeling of envy toward somebody else, and that kind of feeling usually occurs when we are having some kind of competition, real or imaginary, with that person.

Now, could you please stop for a while and try to recall a past situation in which you found yourselves inferior to someone when you were compared with that person, and hence experienced the strongest feeling of envy toward that person.

Then, please try to recall as vividly as possible this past situation.
Imagine yourselves to be in that situation again, and try to re-experience the

feelings and thoughts at that time. Who were you envious of? Why did you feel envy toward that person? How did you feel, think, and behave toward yourselve and toward that person at that moment?

Also, you felt envious of that person after some kind of defeat (or being out-performed) by that person. From your point of view, why did you get such a disappointed outcome when compared with that person? If you were asked to suggest ONE SINGLE cause for that disappointed outcome, what cause would you suggest?
After you have re-experienced vividly the above event, please try to answer the following questions based on your real experiences and thoughts at that time. Each questions will be followed by a answer scale and please put an "*" on top of the proper number to represent your answer to that question:

eg.: *
(Not at all): < 1 2 3 4 5 6 7 > :(very much)

(Please note that the meaning of the two poles may varies from one question to another.)

In the following questionnaire, the word (X) will be used to refer to the person you feel envious of.

You are supposed to have thought of a SINGLE cause for the disappointed outcome in the comparison with X. Now I want to know something about how you view that CAUSE (not how you view the OUTCOME):

According to your own view:

1. Is the cause that you have mentioned something that:

reflects some aspects < 1 2 3 4 5 6 7 > reflects some aspects
of yourselves of the external situation

2. Is the cause that you have mentioned:

controllable by you or < 1 2 3 4 5 6 7 > uncontrollable by you or
some other people any other people

3. Is the cause that you have mentioned something that is:

permanent < 1 2 3 4 5 6 7 > temporary

4. Is the cause that you have mentioned something:

intended by you < 1 2 3 4 5 6 7 > unintended by you
or someone else or anyone else

5. Is the cause that you have mentioned something that is:

outside of you < 1 2 3 4 5 6 7 > inside of you

6. Is the cause that you have mentioned something that is:

variable over time < 1 2 3 4 5 6 7 > stable over time

7. Is the cause that you have mentioned something:

about you < 1 2 3 4 5 6 7 > about other people

8. Is the cause that you have mentioned something that is:

changeable < 1 2 3 4 5 6 7 > unchangeable

9. Is the cause that you have mentioned something for which:

no one is responsible < 1 2 3 4 5 6 7 > someone is responsible

10. Is the cause that you have mentioned something that is:

dispositional to someone < 1 2 3 4 5 6 7 > purely situational

The cause that you have suggested may not have a specific relationship
with both you and X, or it may implies some quantitative difference between you
and X (ie. there were some quantitative difference between X and you on the
quality that you have mentioned as the cause of the outcome).

If you think your cause falls into the former category (no specific
relationship with you and X), please skip question 11 and go to question 12
directly.
If you think your cause falls into the latter category (implying some
quantitative differences between you and X in some domains), please answer the
following question:

11. Talking about the cause you have mentioned, which of the following two
ways of thinking did you incline to?

[X got better outcome than me did because:

X was superior to me < 1 2 3 4 5 6 7 > I was inferior to X,

in terms of the quality that I have mentioned as cause of outcome.]

* * * * * * * * * *

At the time you felt unhappy because of the comparison with X:

12. How angry did you felt at X? Not at all < 1 2 3 4 5 6 7 > Very much

13. How much did you like X? Not at all < 1 2 3 4 5 6 7 > Very much

14. If you had saw X in the street
and X had not saw you, would Certainly < 1 2 3 4 5 6 7 > Certainly
you have greeted and said not yes
hello to X?

15. If you had saw X on the bus
and X had not saw you, would Certainly < 1 2 3 4 5 6 7 > Certainly
you have sat beside and talked not yes
to X?

16. Would you like to have a Not at all < 1 2 3 4 5 6 7 > Very much
chance of co-operation with X?

17. How much you would want X as Not at all < 1 2 3 4 5 6 7 > Very much
a friend of you?

18. Have you ever done (or thought Never < 1 2 3 4 5 6 7 > Frequently
of doing) something negative
toward X?

19. Have you ever made (or thought Never < 1 2 3 4 5 6 7 > Frequently
of making) some nasty comments
about X in front of other people?

How much did you agree with the following two statements?

20. You should not have got such a Do not < 1 2 3 4 5 6 7 > Totally
bad outcome comparing with X. agree at all agree

21. Something that was rightfully Do not < 1 2 3 4 5 6 7 > Totally
yours or should have been yours agree at all agree
was taken away from you.

Whether you are familiar with X or not, would you please point out your
own personal impression on X in the following aspects.

From your point of view, could X be described as:

22. a sensitive person? Not at all < 1 2 3 4 5 6 7 > Very much

23. a reliable person? Not at all < 1 2 3 4 5 6 7 > Very much

24. an attractive person? Very much < 1 2 3 4 5 6 7 > Not at all

25. an interesting person? Not at all < 1 2 3 4 5 6 7 > Very much

26. a popular person? Very much < 1 2 3 4 5 6 7 > Not at all

27. a warm person? Very much < 1 2 3 4 5 6 7 > Not at all

28. a nice person? Not at all < 1 2 3 4 5 6 7 > Very much

29. a sympathetic person? Very much < 1 2 3 4 5 6 7 > not at all

30. Finally, how envious did you felt toward X?

Very much < 1 2 3 4 5 6 7 > not at all

Personal information: (please put an '*' inside appropriate brankets.)

Sex: male ( ) or female ( )

Age range: below 20 ( ), 20-29 ( ), 30-39 ( ), 40-49 ( ), above 49 ( )

With my TS440SAT I must make sure that the microphone is not plugged at the
same time. Removing it and placing the toroid around the audio leads solved
my problem. Also an antenna far away such as a beam on a tower helps a lot.

But no sooner have radar detector detectors arrived, than I see ads now
for "undetectable" radar detectors. Right here in front of me, I have
one in a Herrington catalog (Ph 800-622-5221/FAX 603-437-3492) for a
Bel SuperWideband "Undetectable" Radar/LaserDetector for $339. Do you
know if in fact these "undetectable" detectors are really undetectable?

I know that I can operate in Canada without having to go through the
reciprocal operating stuff, but how long can I do this in Canada?
If I decide to immigrate, does having a US license do me any good?
What frequencies can I operate on in Canada (I'm sure that their
allocations are different than in the US)?

Is there an FTP server in Canada that has this information? I've looked
through the FAQs and browsed world.std.com, but didn't find anything.
Any help is appreciated!! Thanks!

Propagation Forecast Bulletin 5 ARLP005
From Tad Cook, KT7H
Seattle, WA February 4, 1994
To all radio amateurs

SB PROP ARL ARLP005
ARLP005 Propagation de KT7H

Solar flux dipped below 100 last week. Geomagnetic conditions were stable most of the time, but there was one period around 1200z on February 2 when the K index went as high as four. Activity should stay low, but increase again later this month.

WA4TTK has new versions of his popular free solar activity graphing program, including one for Windows. Watch this bulletin next week for more details. In the meantime, you can get a free copy by mailing a formatted MS DOS diskette of any size or format in a postage paid return mailer to Scott Craig, 409 Jessie Drive, Nashville, TN 37211.

Sunspot Numbers from January 27 through February 2 were 63, 60, 89, 81, 81, 55 and 52, with a mean of 68.7. 10.7 cm flux was 120.5, 119, 102, 99, 97.6, 94 and 96.3, with a mean of 104.1.

The projection for this week is from the center of the continental United States to Peter 1 Island.

80 meters should be good from 0400 to 1000z, with the best times from 0530 to 0730. 40 meters should be good from 0300 to 0930, and 30 meters from 0130 to 1130. 20 meters should be open from 2330 to 0200, and possibly until 0530. 17 meters may be open around 1430 to 1630, and has a better chance from 2330 to 0130. On some days 15 meters may be open from 1900 to 0000. 10 and 12 meters do not look good over this path.

Hello all. I just got an Oldsmobile Cutlass with a center, floor mounted console. Kind of like "four on the floor". Looks real sporty but absolutely no place to mount my dual band Yaesu FT-5100 rig. Can someone who has solved this puzzle help me out? How did you mount your radio? Must be vertical along the console but how did you attach it. Does someone make a vertical mount that slips over these consoles or maybe you put velcro on your radio. Anyway, I'd appreciate some suggestions on the best approach. Tnx es 73's...

Hi All!

Well, I managed to hear the shuttle's packet radio this morning, but I have no Idea what call sign to connect to. Or for that matter what is the procedure once you do connect. Could someone give a brief tour of connecting to the Shuttle and getting a QSL card?

Also, can I recieve the equivalent of a QSL card for just hearing them?

>I win my law suit I can get the sherrif to remove your radio tower.
>If that's not the government enforcing my rights, it sure walks like a duck.
>73, Ned AB6FI

It may sound like a "fine distinction" to you, but it's a very real one.

If I commit a crime against you, you can call the police and have me arrested; the DA prosecutes and I end up in jail. This takes NO effort or expense on your part except for talking to the cops and the DA's investigators and for testifying against me in court.

In a civil case, YOU have to file the suit and hire the lawyers. If the court rules against me and I defy the order, YOU have to go back to court to get an order directing the sheriff to enforce the original order, again with your own legal counsel at your own expense.

RACESBUL.312 RELEASE DATE: February 7, 1994

Subject: MGT - Semantics 2/7 - Civil Defense

Semantics is the basis for the majority of misunderstandings or disagreements. Semantics: the definition of words. A word that means one thing in one part of the country can mean either nothing or something else altogether in another part of the country. Let's discuss some of the common position titles most of us have heard at one time or another. Some of the titles apply to paid staff, others to volunteers, and some are held by both.

CIVIL DEFENSE. This term is still used by many jurisdictions. In others it has been changed to emergency services, emergency management, disaster preparedness or similar name --- but it's role is still the same. In some jurisdictions the civil defense official is principally a planner and delegates all or most activities to departments in the jurisdiction. In other jurisdictions the position has command and control authority and responsibility. The CD official may directly supervise the RACES program in some jurisdictions. In others it has been delegated to another department head. The final authority and responsibility, however, always rests with the civil defense official.

1105. BP-8S battery for HTX-202 ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-05 23:23:28 UTC
From: partos@larry.larc.nasa.gov
Message-ID: <PARTOS.94Feb5232328@larry.larc.nasa.gov>
Source record: 271438

Does anyone know if the RS HTX-202 can accept the Icom BP-8S battery? The battery is rated at 9.6v. Is this too high for the 202 ? I know there is a limit to the voltage of the batteries the 202 can accomodate, even though it will accept 13.8v via the input on top of the radio. Apparently there is a circuitry difference in the two inputs, but I don't know what the maximum battery voltage is. Any help or experiences appreciated. Dick KE4AZJ

Source record: 271574

SB SAREX @ AMSAT $STS-60.007
SAREX Update 2/6 at 00:30 UTC

SAREX was officially activated at 14:27 UTC on February 4 with a successful voice contact through the University of Surrey amateur radio station. Doug Loughmiller, G0SYX was the operator at the microphone to intitate the first contact with the STS-60 crew.

The SAREX team reports a highly successful direct contact one orbit later with a school group in Boise Idaho. The contact, held at the Discovery Center included students from several schools including the Boise Senior High School. 19 students were able to ask direct questions to Shuttle Commander Charlie Bolden.

The packet robot has also been quite active. The packet QSO sequence number exceeded the 800 mark about 30 hours after SAREX operations was initiated.

Problems with RFI on the Wake Shield Facility have delayed the deployment of this primary payload. This has affected the SAREX payload somewhat. Currently, the Mars, Pennsylvania school contact, which was scheduled for today, has been postponed until the Wake Shield issues have been resolved.

The official SAREX element set for today will be GSFC-003. Gil Carman, WA5NOM reports that the predictions using GSFC-003 are 1 second later than the current orbiter state vector.

NOTE - This element set is based on NORAD element set # 003.
The spacecraft has been propagated to the next ascending
node, and the orbit number has been adjusted to bring it
into agreement with the NASA numbering convention.

Submitted by Frank H. Bauer, KA3HDO, for the SAREX Working Group

The 3-Hr Ap Indices for 03 FEB 94 are: 4 10 11 13 20 18 10 5

SYNOPSIS OF ACT

Solar activity was very low with only small B-class
bursts observed. Region 7666 (N17E37) grew slightly. New spots
emerged in the plage of Region 7664 (S12W09). Yohkoh images
show the southern coronal hole as similar to last rotation with
a slight equatorward expansion.

Solar activity forecast: solar activity should be at a
very low to low level for the forecast period.

The geomagnetic field was predominantly quiet. Some high
latitude stations experienced isolated active to minor storm

conditions but this level of disturbance was not observed
globally.

Geophysical activity forecast: the geomagnetic field
should be mostly quiet for 05 Feb. Unsettled conditions are
forecast for 06 feb. Beginning on 07 Feb, the coronal hole
related disturbance experienced last rotation should recur.
This long-lived disturbance resulted in daily A indices in
the active range with some K indices in the minor to severe
storm range. Similar conditions are expected this rotation.
The moderate to high fluxes of energetic electrons observed
with this disturbance last rotation may also recur.

Event probabilities 05 feb-07 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 05 feb-07 feb

A. Middle Latitudes
Active 15/30/40
Minor Storm 05/20/30
Major-Severe Storm 01/01/05

B. High Latitudes
Active 15/30/40
Minor Storm 05/20/30
Major-Severe Storm 01/05/10

HF propagation conditions were normal over all regions.
No changes are expected over the next 48 hours. Minor signal
degradation may begin to be observed on 07 February over the
high and polar latitudes.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
03 Feb: 0609 0614 0622 C1.1 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

DIGITAL MODE: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

AO-21: ZL3VTV works AO-21 with great success from his QTH in Christchurch, New
Zealand. He reguarly works stations in Australia with ease using a
a fixed 10 element beam pointed 30 deg above the horizon on the uplink
and using a collinear antenna for the downlink. ZL3VTV is looking for
to work more ZL's and would entertain schedules. [ZL3VTV @ZL3AC]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly
OSCAR status reports. If you have a favorite OSCAR which you work on a
regular basis and would like to contribute to this bulletin, please send
your observations to WD0HHU at his CompuServe address of 70524,2272, on
INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO
area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current
set of orbital elements are not generating the correct AOS/LOS times at

your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

AO-13 ZRO TEST SCHEDULES!

HR AMSAT NEWS SERVICE BULLETIN 036.05 FROM AMSAT HQ
SILVER SPRING, MD FEBRUARY 6, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-036.05

AO-13 ZRO Tests Begin For '94

AMSAT-OSCAR-13

ZRO TEST SCHEDULE

FEBRUARY-MARCH 1994

The ZRO Memorial Technical Achievement Award Program, or just
"ZRO Test" has a new schedule for February and March, 1994, via
AMSAT-OSCAR-13. This activity is a test of operating skill and equipment
performance.

During a typical ZRO run, a control station will send numeric
code groups using CW at 10 words-per-minute. At the beginning of the
run, uplink power from the control station is set to match the general
beacon downlink strength. This is level "zero". The control operator
will send and repeat a random five-digit number, then lower his uplink
power by 3 dB (half power) and repeat the procedure with a new random
number (level "1"). This will continue to a level 30 dB below the beacon
(level "A").

A participating listener monitors the downlink signals until he
or she can no longer copy the numbers. Those who can hear the beacon
will qualify for the basic award by copying the code group heard at level
"zero". The challenge is to improve home-station performance to a point
where the lower-level downlink signals can be copied (levels 6 through
A). To date, only one station, Darrel Emerson (AA7FV), has successfully
copied level "A".

The following schedule of Mode "B" tests were chosen for convenient
operating times and favorable squint angles. The tests can be heard on
145.840 MHz. Andy WA5ZIB will conduct all the tests. Mode "JL" tests
will no longer occur due to the failure of AO-13's 70-cm transmitter.

Day Date (UTC) Time Areas covered

Saturday Feb. 12, 1994 2345 UTC NA, SA, Europe, W. Africa
Sunday Feb. 20, 1994 0330 UTC NA, NW SA, Japan, Pacific
Saturday Feb. 26, 1994 1930 UTC NA, SA, Europe, Africa, ME

Saturday Mar. 19, 1994 1930 UTC NA, SA, Europe, Africa
Saturday Mar. 26, 1994 2315 UTC NA, SA

Note that the dates and days are shown in "UTC", thus the second test occurs at 9:30 PM CST Saturday night (the 19th). Any changes will be announced as soon as possible via the AMSAT HF and AO-13 Operations Nets.

All listener reports with date of test and numbers copied should be sent to Andy MacAllister WA5ZIB, AMSAT V.P. User Operations, 14714 Knights Way Drive, Houston, TX 77083-5640. A report will be returned verifying the level of accurate reception. An S.A.S.E. is appreciated but not required.

Information about the AMSAT Awards Program can be found on page 197 of the "Proceedings of the AMSAT-NA Tenth Space Symposium" (1992). This paper, covering all the AMSAT-NA awards including specifics on the ZRO Test, was reprinted on page 10 in the March/April 1993 issue of "The AMSAT Journal". The ZRO Test information provided in the article covers test procedures, means for obtaining certificates and gives some historical background about the program. Reprints of the article can be obtained for an S.A.S.E. to WA5ZIB at the address above.

OSCAR-21 CELEBRATES THIRD BIRTHDAY

HR AMSAT NEWS SERVICE BULLETIN 036.04 FROM AMSAT HQ
SILVER SPRING, MD FEBRUARY 6, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-036.04

OSCAR-21 CELEBRATES THIRD BIRTHDAY

On 29 January 1991 the first international Orbiting Satellite Carrying
Amateur Radio (OSCAR) in which radio amateurs from the former
Soviet Union (CIS) worked together with radio amateurs from
Germany was successfully launched.

The official name of the project was RM1, which stands for "RADIO M-1".
The digital transponder RUDAK-2 is part of RM1.

After the launch from the Northern Cosmodrome in Plesetsk, Russia
the satellite was named as AMSAT-OSCAR 21, to emphasize that the
spacecraft was built by, and for, Radio Amateurs around the world.

AMSAT OSCAR-21 is an attached secondary payload (Piggy-back) aboard
the CIS geological research satellite "INFORMATOR-1".

OSCAR-21 (also known as RS-14) is a joint project between AMSAT-U
in Russia and AMSAT-DL in Germany.

Two UUENCODED files which show the RUDAK hardware and two pictures taken from
an original launch video have been uploaded to AMSAT-BB by DB2OS. The picture
is compressed using CJPEG.

ANS thanks Peter Guelzow DB2OS for this item.

SILVER SPRING, MD FEBRUARY 6, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-036.03

AMSAT NET ON GALAXY 3

Satellite users may be interested in an experimentbeing conducted in the Houston, Texas area. The group there is uplinking the Houston Area Amsat Net, heard locally on the 147.10 FM repeater, to Galaxy 3, Channel 17, 5.8 Mhz. audio subcarrier (Shop-At-Home Channel). This net is carried in realtime on Tuesday evening, from approximately 10PM (CST) until completion at approximately 10:30 - 10:45 PM. This is an experiment but could be continued on a regular basis if interest is sufficient. Please send reports of your reception and your comments to: davidsonc@tcd.jsc.nasa.gov via Internet, or call (713) 483-0078 during business hours, or during the uplink period (713) 595-2393. Ask for Craig Davidson, WD5BDX.

ANS wishes to thank Craig Davidson WD5BDX for this information.

SAREX UPDATE AS OF FEB 6 at 00:30 UTC

HR AMSAT NEWS SERVICE BULLETIN 036.02 FROM AMSAT HQ
SILVER SPRING, MD FEBRUARY 6, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-036.02

SAREX Begins Operation

SAREX was officially activated at 14:27 UTC on February 4 with a successful voice contact through the University of Surrey amateur radio station. Doug Loughmiller, G0SYX was the operator at the microphone to intitate the first contact with the STS-60 crew.

The SAREX team reports a highly successful direct contact one orbit later with a school group in Boise Idaho. The contact, held at the Discovery Center included students from several schools including the Boise Senior High School. 19 students were able to ask direct questions to Shuttle Commander Charlie Bolden.

The packet robot has also been quite active. The packet QSO sequence number exceeded the 800 mark about 30 hours after SAREX operations was initiated.

Problems with RFI on the Wake Shield Facility have delayed the deployment of this primary payload. This has affected the SAREX payload somewhat. Currently, the Mars, Pennsylvania school contact, which was scheduled for today, has been postponed until the Wake Shield issues have been resolved.

The official SAREX element set for today will be GSFC-003. Gil Carman, WA5NOM reports that the predictions using GSFC-003 are 1 second later than the current orbiter state vector.

1 22977U 94006A 94 35.13981770 0.00000202 00000-0 58718-5 0 37

STS-60 SAREX Mission Begins

HR AMSAT NEWS SERVICE BULLETIN 036.01 FROM AMSAT HQ
SILVER SPRING, MD FEBRUARY 6, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-036.01

STS-60 News as of 3 February 1994 at 12:30 UTC

The Space Shuttle Discovery made a spectacular, historic, on-time liftoff this morning from the Kennedy Space Center. Discovery's launch marks the first joint U.S.-Russian Space Shuttle Flight. This will be the first of several joint missions planned in preparation for the development of the international Space Station. Cosmonaut Sergei Krikalev, U5MIR, was one of the six crew members on board this morning's Shuttle flight. His fellow American crew mates include Commander Charlie Bolden, KE4IQB, Pilot Ken Reightler, and Mission Specialists Jan Davis, Ron Sega, KC5ETH, and Franklin Chang-Diaz. The primary payloads on-board Discovery are the Wake Shield Facility, which will be deployed and retrieved during the flight and the Spacehab facility. Of particular interest to radio amateurs is the Shuttle Amateur Radio Experiment (SAREX) secondary payload. SAREX information for STS-60 including frequencies, callsigns and Keplerian elements, follows:

STS-60 Shuttle Amateur Radio Experiment (SAREX)
Information Sheet

Mission: STS-60 Space Shuttle Discovery
Wake Shield Facility & Spacehab-2 Mission

Launch: February 3, 1994, 12:10 UTC

Orbit: 57 degree inclination

Mission Length: 8 days (Nominal)

Amateur
Radio
Operators: Charlie Bolden, KE4IQB, Ron Sega, KC5ETH,
Sergei Krikalev, U5MIR

Modes: FM Voice
Prime callsign: KE4IQB

Packet Radio
Callsign: W5RRR-1

Frequencies: All operations in split mode. Do not transmit on
the downlink frequency.

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
(Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Note: the crew will not favor any specific uplink
frequency, so your ability to work the crew will
be the "luck of the draw"

Packet Freqs: Downlink: 145.55 MHz
Uplink: 144.49 MHz

: --
: Ed Carp, N7EKG ecarp@netcom.com 510/659-9560

This stuff really should be put in a FAQ.

Well, your US licence is good in Canada indefinitely, as long as it is valid, as far as I know. If you become a landed immigrant, and wish to obtain a Canadian licence, I have been told by a government official that you must pass all the exams. I have also been told by Rich, who went through the process, that you can get credit for code and theory and will only have to pass the rules exam.

Unlike US rules, Canadian rules do not explicitly void reciprocal privileges upon taking out Canadian citizenship. You could therefore make a case that that means, as long as you retain US citizenship, your US licence is valid in Canada. You could also make the case that the reciprocity treaty doesn't apply to a citizen of Canada regardless of any other citizenship. I don't know the actual legal answer, but the latter makes more sense to me. You'll have to ask them for an authoritative answer, though. Let me know if you find out.

PRIVILEGES: Although others claim to have been told otherwise, both the Canadian rules and the Canadian official I talked to said the following:

US Generals, Advanceds, and Extras (in fact, anyone with a license requiring a 12 wpm test or higher) have all the privileges of the Canadian Advanced + 12 wpm qualification, and hence all Canadian amateur privileges. Forgive me for not detailing these - they are in the rules, instructions for requesting them below. On HF, Canadians have all the frequencies US amateurs do, with no mode restrictions - they did away with these an number of years ago. On 30 meters, the bandwidth limit is 1 KHz; everywhere else on HF/MF, it is 6 KHz. That means that phone is legal, technically, at 14.020. It does violate the bandplan, which limits phone to 14.100-14.350 (I think). Canadian

amateurs have bandplans for all HF bands the way we have one for 160 meters. They do not rely on rules to restrict modes.

Technicians WITHOUT code (and anyone with a no-code licence) are considered to have Canadian Advanced (no-code) privileges (i.e., everything about 30 MHz).

Novices and Technicians WITH code (and anyone with a licence carrying a code requirement of less than 12 wpm) are considered Basic operators above 30 MHz (all bands, all modes), plus below 30 MHz they can use CW and CW only on all amateur frequencies.

(Basic operators cannot put up a or posess a repeater, or be the trustee of a club station, or use or posess homebrew. They also cannot use full power: for example, while an Advanced is allowed 1000 watts input, the Basic is limited to 250. Complete power regulations are found in the rules.)

(Yes, that means a Technician who passes a code test *loses* the ability to use high power and do these other things above 30 MHz in Canada. An anomoly in the Canadian rules when applied to the US licensee. Too bad you can't happen to find that code certificate all of the sudden, isn't it? :->)

According to that government official I talked to, as well as the rules near as I can tell, you are NOT, repeat NOT, restricted to your US amateur privileges while in Canada, contrary to what the ARRL rule book says. That means that it is perfectly legal for a General, while in Canada, to use phone on 14.110, or CW on 7.010. It's somewhat frustrating, because others have reported being told otherwise. But I, for one, am convinced this is the case after reading the rules.

Source, GR2: 45(1)-(4), in RIC-25.

You can contact the offices I talked to (both in Quebec) by calling (514) 283-5682 or (819) 564-5543. Or you can get the number of a district office nearer to you and call them - they're in most every city you'd care to think of. While you ask them your questions, you can also ask them for the following pamphlets:

RIC-3 ("rick three", stands for Radiocommunication Information Circular): Canadian Banned countries/ 3d party countries / Reciprocal Countries list. Clearly useful.

RIC-24: Information on the Amateur Operator's Certificate Examinations (includes syllibi)

RIC-25: Rules and Regulations Affecting the Amateur Service. Don't operate in Canada without it!

RIC-66: Addresses and Telephone Numbers of Regional and District offices of Communcations Canada (or whatever their name is now)

All free, aussi disponible en francais if you're so inclined (CIR-25, etc.).

That's my understanding of the subject. Good luck.

To all radio amateurs

SB QST ARL ARLB016
ARLB016 Georgia bill introduced

A bill introduced in the Georgia Legislature that would eliminate the effect of restrictive property covenants on amateurs is believed to be the first of its type in the nation, according to Georgia Section Manager Jim Altman, N4UCK.

The bill, H.B. 1134, would prevent all new and renewed covenants from regulating, controlling, or restricting antennas owned and operated by licensed amateurs in the state.

Altman said that, in Georgia, all restrictive covenants have a life of 20 years, but can be renewed. This law, in banning new and renewed covenants, would leave the existing covenants in place until their natural expiration, and prevent new ones. Over the next 20 years, all existing covenants would disappear.

The bill was initially referred to the State Bar committee on real property law, which gave the measure a ''do pass'' recommendation.

Amateurs in Georgia are urged to contact their state legislators and urge their support of H.B. 1134. For more information, contact Altman or the Regulatory Information Branch at ARRL Headquarters.

From ARRL Headquarters
Newington CT February 4, 1994
To all radio amateurs

SB QST ARL ARLB017
ARLB017 RF standards opposed

RF standards opposed

The ARRL has told the FCC that a proposal to adopt new standards for exposure to radio frequency radiation should be terminated.

The League said that the proposal, which would change the Commission's guidelines to match those adopted by the American National Standards Institute (ANSI) and the Institute of Electrical and Electronic Engineers (IEEE) in 1992, was premature, and more properly should have been introduced as an FCC notice of inquiry.

The ARRL said that the ANSI/IEEE standards were not properly delineated and not a proper basis for evaluating communications facilities. The new standards would replace less stringent standards adopted in 1982.

The League said that an FCC Report and Order in 1987 that concluded that amateur stations should be exempted from such RF exposure guidelines, because amateur stations operate only intermittently, and at low power levels, still applies. Only rarely, the League said, would amateur stations even exceed the proposed, more stringent 1992 ANSI/IEEE standard.

The League said that the FCC's proceeding should be terminated in favor of more study, by a more appropriate government agency, such as the Environmental Protection Agency, or else by an FCC notice of inquiry.

This proposal, in ET Docket 93-62, was made in the spring of 1993 and its comment deadline has been extended several times, most recently to January 25, 1994, based on a request by CBS Inc. The reply comment deadline is February 24, 1994.

SB DX ARL ARLD008
ARLD008 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE; QRZ DX; and the Ohio/Penn and Yankee Clipper Contest Club PacketCluster networks. Thanks.

PETER FIRST ISLAND. 3Y0PI has been active for several days. The last 100 PacketCluster spots show stations in the northeast US working them on all bands 40 through 10 meters.

On CW try 1826, 3522, 7022, 10104, 14024, 18074, 21024, 24894 and 28024 kHz. Listen for their SSB on 1845, 3785, 7065, 14195, 18145, 21295, 24945 and 28475 kHz. For RTTY try 1825, 3680, 14080, 21080 and 28180 kHz; and satellite action on 145.890 MHz listening down on OSCAR 10 and 13.

On HF the split windows are 5 to 10 kHz wide maximum on CW and 25 kHz on SSB. Stateside stations are being worked by call areas following propagation patterns, typically 1, 2, 3, 4, 8, 9, 0, 5, 7 and 6.

At around 1800z February 3, the DXpedition crew had some problems with their generators. The icebreaker that is to pick them up is running six days behind schedule, so the new pick up date is February 19.

MOUNT ATHOS. Monk Apollo, SV2ASP/A, has been heard on some of the WARC bands with a very strong signal, most notably on 17 meters. Also check between 3790 and 3795 kHz at 0530 and 1700z. He recently showed up on the 21335 DX Net around 1345z.

KERGUELEN ISLAND. New amateur Pierre, FT5XJ, will be on the island until July for a three month leave. When he returns his stay will be for a year. He has been on 14250 kHz at 0500z, 14191 kHz at 1420z and can sometimes be found on 14198 kHz. QSL via F5NLL.

TONGA. Jim, VK9NS, is on as A35MR. He was worked on 21260 kHz between 2100 and 2200z. A35KB has also been active. Nob, JF2MBF, ex VR6JJ, along with Yasu, JI1NJC, will start a four week Pacific DXpedition from Tonga as A35JJ from February 12 to 20. This will be all band CW, SSB, RTTY and satellite operation. QSL A35JJ via JR2KDN.

TURKS AND CAICOS ISLANDS. Ed, K9IMM, and Carol, NS9L, will be on Provos from February 17 to 24. K9IMM will operate the ARRL CW DX Contest on 160 meters as VP5B. Before and after the contest Ed and Carol will operate as VP5/ their own calls on 160 through 10 meters, some of which may be with QRP. QSL via WB9NOV w/SASE.

THIS WEEKEND ON THE RADIO. The North American Sprint CW, sponsored by the National Contest Journal, NCJ, runs for four hours starting at 0000z February 6, or Saturday night local time. Check around 3540, 7040 and 14040 kHz. Complete rules appear on page 127 of January QST.

The 1994 Classic Radio Exchange is from 2000z February 6 to 0400z on the 7th. Amateurs are encouraged to operate restored equipment at least 10 years old. Exchange name, RST, QTH, receiver and transmitter type. CW action will be 60 kHz up from the bottom of the band. For SSB try 3880, 7290, 14280, 21380 and 28320 kHz. Novice/Tech stations on HF will be 20 kHz up from lower subband edge.

The Vermont QSO Party, sponsored by the Central Vermont ARC, is a must for those needing Vermont for their WAS awards. It starts at 0000z February 5 and ends at 0500z on the 6th. Activity will be on 160, 80, 40, 20, 15 and 10 meters.

For further information on these three operating events, check page 127 of January QST.

Well, almost. Canadian rules also require that reciprocal operators
from the US be not only US citizens but US residents, too. That would
mean landed immigrants needed a Canadian license. The way the rules
are written seems to imply that Americans residing elsewhere (e.g.,
Britain) are not eligible for reciprocal privileges at all, but that's
such an odd result that I doubt they enforce it that way (that result
may violate the treaty, too, which makes no mention of residency
requirements). In any event, you'll need to ask a Canadian official
for the real answer.

1124. Antenna Erection Aids

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-06 14:42:42 UTC
From: julian@bongo.tele.com
Message-ID: <1994Feb6.144242.14808@bongo.tele.com>
Source record: 271565
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Recently, there was much correspondence about getting antennas
up in trees. Short of hiring a trained monkey, there are various ways
of getting a line up on a high limb. The favourites seemed to be: bow
and arrow or catapult (sling shot) and spinning (fishing) reel with a
weight.

The most compact and least troublesome is the catapult and
fishing reel combo. It is small and allows you to reel the line back.
For the standard anti-social contester, it also means being able to do
it alone, so you don't have to be nice to your neighbours or fellow
hams so they will help you get that top band dipole up.
The bow and arrow solution can use a fishing reel, but usually
involves a second person to hold a rod and line while someone does the
Robin Hood stuff. The second person often ends up being a grumpy
spouse who needs no further persuasion that amateur radio is a waste
of time, money and useful house space.

For those appliance operators that would like the catapult
and reel option but lack the motivation or skills to attach a $10.00
reel to a $10.00 catapult with $00.02 of duct tape there is a
solution.

For only $39.95, you can buy a fishing reel catapult combo
designed for the job. Call Chicago's Telecom Expert, 812 Nerge Road,
Roselle, Illinois 60172. Phone (708) 980-7710 (24 Hours). Order the
"Sling-A-Line". All the usual credit cards accepted.

Two things you should know folks: If you ask one question to 4
Canadian officials, you will get at least 2 or 3 different answers.
Also, there is no such thing as a Rule exam. There is a Basic exam
and an Advanced exam. The Basic has 100 questions, with multiple
choices, and covers rules, basic theory, propagation, interference,
etc. You need 60% to pass. This gives you access to a max. of 250
Watts and frequencies (all mode) over 30 mhz. The Advanced exam has
50 questions and if you pass you can go to a full kilowatt, have
your own club, your own repeater, and you can fix and modify your
ham gear.

Impossible! There is no such thing in Canada now that allows you to
use code only on certain bands. You either have access to a band or
you don't. The 5 wpm gives you access to both 160 m and 80 m. On 80
m, legally, you could use SSB everywhere, but in practice Canadians
(in Canada) will be between 3690 and above. Most Canadian nets are
around 3735 and 3780 mhz
>

I also understand that the way Power is measured is different than
it is in the US. I heard someone explain that 1000 Watts in Canada
is around 2.5 kw in the US.

I disagree. You are stuck with US limits when you visit Canada
*unless you have obtained a Canadian licence _and_ a Canadian
Callsign*, in which case you have full Canadian privileges *while
operating in Canada* When Canadians are say, Mobile W4 in Florida
they are restricted by the US bandplan and cannot use voice to talk
to their friends on say 14,140 nets.

>
>Let's be a bit reasonable here -- it doesn't make sense for DARA to put on a
>Hamvention if no one can get to it, does it?

Well they've *been* doing it. :-) Even with the Shuttles, traffic is about the worst I've seen for any event of this size or larger. Any major NASCAR event has better traffic control than Dayton, and they have crowds over 100,000 to get in and out. *The* major problem seems to be a poor interface to the Dayton Police. They should have officers out directing traffic at *all* the major choke points, not just at the Arena. But they *don't*. So traffic backs up at the lights for miles. That's easily fixed I would think.

>Every year at about this time we start to hear the rumours -- that Hara Arena

Well sure, aside from the tornados, ice storms, hurricanes, blizzards, and heat waves, Dayton weather is perfect in April. (NOT!) I've been sunburned, nearly drowned, and frozen stiff on different ocasions, some of them the *same* year. :-)

>Why don't we all just take a deep breath and calm down.

Because it wouldn't be nearly as much fun. :-)

Hey, we all show up year after year don't we?

I agree with you Jeff. I think self-policing means that we take responsibility for our hobby. It doesn't have to be FCC-Jr. style. There's a big difference between *saying* you are going to put up a 5 KW station, and *doing* it! Ahead of time, letting the potential offender know that there are *many* hams that would love to shut down unwarranted QRM listening, and with e-mail quickly reporting it, could kill whatever urge there is to actualize this activity (not inexpensive).

It's an interesting question though.

Just tried to work the 3Y0PI and Mr. Murphy visited my shack.
The Ameritron AL-80X (X means factory installed 10 meters)
will not load on either 10 or 15 meters. It loads on lower
bands with less output than it used to have.

I have heard the sign of a 3-500 going bad is it goes soft
on the higher freqs.

I hate to spend the $ for a new tube if there is another
problem.

No, i am sure this is wrong. Below 30Mhz they would have the same privileges
as the Basic license with 5wpm code test and these are that they can operate
all modes ONLY on 160 and 80 meters.

You can disagree, but he's right. The regs clearly state that a U.S. amateur
who is a U.S. citizen AND resident and who is qualified to send and receive
Morse code at a speed of at least 12 wpm has all the privileges of the Basic,
12wpm, and Advanced qualifications. Which means they can operate all modes
on all bands, just like I can.

>
>No I didn't, I said Half Wave Vertical, not dipole. You are the one who said
>there is no differance in gain weather it is fed in the middle or at the end.

That's right, because there *is* no difference in radiation pattern, and hence forward gain. The only effect of feedpoint placement is different impedances presented to the transmission line, a non-issue with proper matching networks.

The relevant power formulas for isotropic (theoretical) and actual 1/2 wave radiatiors are

Isotropic P=Pt/(4*pi*R^2)

halfwave P=1.64*Pt/(4*pi*R^2)

Pt is transmitted power in watts
R is the perpendicular distance from the radiator in meters.

There is *no* distinction as to feed point placement.

From _Reference Data for Radio Engineers_, 4th edition, pp 675-676.

>Let me state it again...for vertical antennas, a half wave vertical has more
>gain than a quarter wave vertical, a 5/8 wave has more gain still, a 3/4 wave
>has more yet, and so on...But how does the gain change if fed from the center
>or off center like a Zepp (don't I remember something about them having a gain
>of 1.66 over a dipole or something like that...probably wrong).

Feedpoint location is irrelevant for pattern calculations of halfwave radiators, that's strictly a matching issue. (In practice, different matching systems can impact antenna *system efficiency*, but that's a separate issue. The relevant formula for vertical radiator field strength at a given angle from the vertical is

E=((60*I)/(D*sin(2*pi*h/L))*
((cos((2*pi*h/L)*cos(phi)))-(cos(2*pi*h/L))/sin(phi))

Where E is field intensity in mV/m,
I is antenna base current in amperes
h is length of antenna in meters
L is wavelength in meters
D is distance from the antenna is kilometers,
Phi is the angle from the vertical of the radiation

If you run this equation for a family of antenna lengths, you'll find that maximum radiation perpendicular to the antenna (toward the horizon) occurs at an antenna length of 0.639 wavelengths. This was worked out in 1935 by Gihring and Brown, "General Considerations of Tower Antennas for Broadcast Use", Proceedings of the IRE, vol 23, pp.311-356, April, 1935.

>But, we have to remember for a vertical antenna at given frequency, as the length
>of the radiating element increases the angle of radiation rises. And since it is such
>a theoretical nightmare to compute real world RF patterns we talk about theoretical
>perfect situations over perfect grounds and then compare those to the real world ones
>in the ARRL Antenna Handbook and other such material. I don't know too many Hams who
>can setup an acre of land with 120 radials spaced equaly around in a circle, seed the
>ground with the proper amound of rock salt, and do the rest to make as perfect of
>ground as possible (this is suppose to work for Yagi/Quad beams on towers too). Wish

>I had the place to do this...or is it 100 acres?

Well we broadcasters do, and the angle of maximum radiation does *not*
rise monotonically with increasing length. In fact, starting with a short
antenna, it *decreases* until a length of 0.636 wavelength is reached, and
then increases back toward the short antenna case as length increases further
until it reachs the *same* value at 0.75 wavelength as it had at 0.25
wavelength. Beyond 0.75 wavelength, the pattern breaks into minor lobes
and gain perpendicular to the antenna continues to decrease. A vertical
antenna 0.639 wavelengths in height has the *maximum* broadside gain of
any simple vertical.

Data from _Reference Data for Radio Engineers_, 4th edition, pp.672-673.

>>>It is not true that a 5/8 wave vertical is the highest gain vertical.
>>>What it is is the best compromise for the gain and angle of radiation. As the
>>>vertical element, or any element for that matter, gets longer for a given
>>>wavelength the major lobe/lobes eminating from the antenna start skeewing(sp)

>may not understand all the wherefores and as such but I tend to believe them.

Yeah, well that's because you're comparing apples and oranges. In the
case of the endfire 3 el array, the horizontal pattern is a figure 8.
In the case of the colinear vertical array, the horizontal pattern is
omni-directional. Both have a compressed vertical pattern, though the
colinear is much more compressed (that's where it gets *all* it's gain).
Compressing the pattern in *two* planes naturally gives more gain than
only compressing it in one, but forms a *directional* vertical antenna
rather than an omni-directional antenna. Apples and oranges. (Note too
that the example colinear has *zero* spacing between elements. That's
the lowest possible gain stacking arrangement. See your Cushcraft 4-pole
numbers for vertical elements stacked with 1/2 wave spacing. Much higher
gain.)

>On page 2-23 of the same text...
> ' ...An infinitely thin 1/2 wavelength dipole has a theoretical gain of 2.14 db
>over an isotropic radiator (dBi)... '
> ARRL Antenna Handbook, 16th Edition
>And I know that the thinner the dipole the higher the Q of the resonant circuit, so an "infinitely
>thin" dipole has the highest Q. In other words, the highest gain. This is why a Quagi, quad driven
>element and reflector with dipole directors has more gain theoretically than a quad with the same
>boom length. (I have a love/hate relationship with quads) Higher Q elements.

No. Gain and Q are not directly related. A quad loop has a lower Q
than a dipole element, that's one of it's features, greater bandwidth,
but a 2 el quad has more gain than a 2 el yagi, about the same as a
3 el yagi in fact. That's because a loop has a bigger capture area,
and antenna gain is related to capture area by the following formula

G=(4*pi*A)/L^2

Where G is gain,
A is aperture area,
L is wavelength.

>I haven't been able to find a gain figure for a single 1/4 wavelength vertical in the ARRL Antenna
>Handbook. Looking through the Amateur Radio Supply catolog(Winter 93/94) it is easy to see how gain
> figures vary.

>some of their specs...
> ' Four Pole Array ... (stacked dipole for VHF/UHF ranges)...
> AFM-4DA...144-148 (MHz)... Gain, dBd ... (over a dipole) ... 9 Offset(?)...6 Omni...'
> (page 107)
> (that is a 4 dipole stacked array with 6 db gain over a dipole...sounds like
> a bit of difference from the ARRL Handbook figures...4.2 db, so much
> for homework)

Apples and oranges again. The 4-pole is a 1/2 wave spaced stacked array of halfwave dipole elements while the colinear you chose from the Handbook has *zero* spacing. Halfwave spacing gives a *much* sharper lobe, hence greater gain, than a zero spaced array. What they mean by offset and omni in the 4-pole spec is that the elements can be arranged all on one side of the mast (offset) for 9 dbd gain *in that horizontal direction*, or they can be staggered 90 degrees apart as they go up the pole for 6 dbd *omni* horizontal gain. Actually, this is a crummy antenna, and Cushcraft is always optimistic in their gain figures. A Comet stacked antenna is a better comparison.

Advertised antenna gain figures are generally measured by the marketing department, not the engineering department. That's why QST refuses to print them.

For all of you waiting for your licences, I and a friend of mine got our licences (no code tech) yesterday, exactly 8 weeks after taking the test, and we live in AZ. So it looks like the FCC is starting to get their act together, since during the last eight weeks there was the break for the cold storm and the winter holiday in the east. Good luck to the rest of ya.

The problem with SO239, and the mating PL259, connectors is that they aren't 50 ohm impedance connectors. Therefore they represent an impedance bump on the coax that can affect VSWR. *However*, their impedance mismatch can be *absorbed* into radio or antenna matching networks by competent designers. Therefore, the coax sees a match even though the connector in isolation would present a mismatch. So it's OK to have them at the endpoints of a line *if the equipment is designed for them*. Having them in the middle of a line (like with jumpers) is bad news. Same thing with NMO, the antenna is *designed* to use this connector/mount and absorbs it's impedance into the network. Don't worry, be happy, these connectors are OK in good designs. However, beware, there are companies who try to pass off CB mounts for VHF/UHF. Those will kill your signal due to excessive capacitance between inner and outer conductors. I bought one "70cm groundplane" antenna that was an effective dead short at 70 cm due to the 1/4 inch stud whip mount having only 1/16 inch insulated sleeve between the stud and the plate mount.

: Why do the cognoscenti here prefer the KAM, anyway?

Well, I've used (or rather - TRIED to use) the PK-232 and was totally frustrated by it. I do OWN and USE the MFJ-1278, a TNC-2, and a KAM. I bought all the machines but was given the KAM by another ham. My favorite machine is definitely the KAM for a simple reason. I am a DXer and Contester. Of the machines mentioned, only the KAM is dual-port meaning that I can operate V/UHF packet (i.e. PacketCluster) at the SAME TIME that I am operating HF digital modes. For me, that is the primary reason why I prefer the KAM. If the MFJ-1278 was a dual-port machine, I would probably prefer that one.

Cheers de Sandy WA6BXH/7J1ABV WA6BXH@N0ARY slay@netcom.com

1136. WARNING: Potential Satellite Anomaly Warning

Newsgroup: rec.radio.amateur.misc

/\

POT

ISSUED: 17:00 UT, 06 FEBRUARY

/\

ATTENTION:

Geosynchronous satellites may experience magnetopause crossings over the
next 12 to 24 hours. A filament-related disturbance has resulted in brief
magnetopause crossings for the GOES-6 satellite. GOES-6 experienced
crossings between 17:11 and 17:13 UTC, and again between 16:22 and 16:29 UTC.
GOES-7 has not experienced any crossings at this time.

In addition, there is a possibility for the recurrence of high-energy
electrons at greater than 2 MeV. If this event recurs as it did last solar
rotation, it should begin later this UTC day or on 07 February. At the
present time, electrons at greater than 2 MeV are running at near-normal
levels. They are not enhanced at the present time. Two solar rotations ago,
the electrons at this energy level were enhanced to relatively high levels,
but the duration of the enhancement was much shorter than the enhancement
observed last rotation (where the enhanced high-energy electrons lasted
almost 10 days).

Although electrons at these energies are correlated with recurrent
coronal holes, it is impossible to determine whether the slight increase in
size of the current coronal hole will produce a similar long-duration
high-energy electron enhancement as was observed last rotation. We will
monitor the situation on a daily basis and advise as necessary.

** End of Warning **

From: jrl2@cornell.edu
Message-ID: <jrl2-060294144057@cu-dialup-0423.cit.cornell.edu>
Source record: 271575

Hello,
I would like to start a FAQ for Collage Amateur Radio Clubs. If you know
of a radio club on campus could you send me some info about it. I'm looking
for
-Name of the Club
-School
-Address
-Club Officers and email addresses if possible
-Repeaters
-Club station (Y/N) Callsign and what type of equipment
-Organizations the club belongs to (ARRL, 10-10, etc)
-Year started
-#members
-bands members can be found on
-email address (if possible) of the club's listserver
-a short history of the club

Even if you can't answer all the questions, oh well, its a start. I will
put the
info on a ftp site and/or post if people are interested.
Thanks,

```
-Jeff Luszcz N2TIQ
jrl2@cornell.edu

NADO000 (NADO@UNB.CA) wrote:
: In article <CKsGp5.2KF@world.std.com> drt@world.std.com (David R Tucker) writes:
: Two things you should know folks: If you ask one question to 4
: Canadian officials, you will get at least 2 or 3 different answers.

I had noticed that.

: Also, there is no such thing as a Rule exam. There is a Basic exam
: and an Advanced exam. The Basic has 100 questions, with multiple
: choices, and covers rules, basic theory, propagation, interference,
: etc. You need 60% to pass. This gives you access to a max. of 250
: Watts and frequencies (all mode) over 30 mhz. The Advanced exam has
: 50 questions and if you pass you can go to a full kilowatt, have
: your own club, your own repeater, and you can fix and modify your
: ham gear.

Well, all I can say is that one American told me he was able to get a
Canadian license after answering the 25 rules questions on the Basic
test with a passing grade. Like you say, that may not happen in every
case. YMMV, but it *has* happened. For those who care, the code exam
in Canada is 12 or 5 wpm, 3 minutes, 6 or more errors fails.

: >Novices and Technicians WITH code (and anyone with a licence carrying
: >a code requirement of less than 12 wpm) are considered Basic
: >operators above 30 MHz (all bands, all modes), plus below 30 MHz they
: >can use CW and CW only on all amateur frequencies.

: Impossible! There is no such thing in Canada now that allows you to
: use code only on certain bands. You either have access to a band or
: you don't. The 5 wpm gives you access to both 160 m and 80 m. On 80
: m, legally, you could use SSB everywhere, but in practice Canadians
: (in Canada) will be between 3690 and above. Most Canadian nets are
: around 3735 and 3780 mhz

It's quite true. Else how do you explain General Rules 2, 45, 3:

"A foreign amateur who is qualified to sent and receive Morse code at
a speed of at least 5 w.p.m. may

"(a) operate an amateur station in Canada with the provisions
applicable to the holder of an Amateur Operator's Certificate
with Basic Qualification [NOT Basic + 5 wpm!]; and

"(b) transmit radiotelegraphy signals using on-off keying in all
frequency bands below 30 MHz as set out in Schedule II
[which lists the bands]."

We are NOT talking "Basic + 5" privileges here. They are NOT the same. Unlike a "Basic + 5", a Novice operating in Canada CANNOT use phone on 80, but CAN use CW on 20. If you know of a contrary authority, I'd love to hear about it, if you can cite it, but that's what it says.

: >
: >(Basic operators cannot put up a or posess a repeater, or be the
: >trustee of a club station, or use or posess homebrew. They also
: >cannot use full power: for example, while an Advanced is allowed 1000
: >watts input, the Basic is limited to 250. Complete power regulations
: >are found in the rules.)

: I also understand that the way Power is measured is different than
: it is in the US. I heard someone explain that 1000 Watts in Canada
: is around 2.5 kw in the US.

Well, Canadians (with Advanced qualification) are limited to 1000 w in, or 2250 w out PEP on SSB, or 750 watts out non-SSB. In the US the power limit is 1500 w PEP all modes.

I forgot to mention that Basic operators cannot use auxiliary links.

: >According to that government official I talked to, as well as the
: >rules near as I can tell, you are NOT, repeat NOT, restricted to your
: >US amateur privileges while in Canada, contrary to what the ARRL rule
: >book says. That means that it is perfectly legal for a General, while
: >in Canada, to use phone on 14.110, or CW on 7.010. It's somewhat
: >frustrating, because others have reported being told otherwise. But

errata: the rule book says nothing of the sort. The ARRL operating manual does, on page 3-10. Dead wrong.

: I disagree. You are stuck with US limits when you visit Canada
: *unless you have obtained a Canadian licence _and_ a Canadian
: Callsign*, in which case you have full Canadian privileges *while
: operating in Canada* When Canadians are say, Mobile W4 in Florida
: they are restricted by the US bandplan and cannot use voice to talk
: to their friends on say 14,140 nets.

Says who?

Canadians (in fact, all reciprocal licensees) are limited by 97.107 to whatever they can do at home, not to exceed what an Extra can do. But that's a US regulation.

There is *no* analogous regulation in Canada.

You sort of ignored my source:

: >Source, GR2: 45(1)-(4), in RIC-25.

This causes so much confusion, I'm going to explain once why I believe this to be so in gory detail:

1. An official of the Government of Canada told me so. (Who could be more reliable?)

2. The Canadian rules, GR2: 45., clearly state that a person with a foreign licence requiring 12 wpm or higher is entitled to operate amateur stations in Canada "with the provisions applicable to the holder of an Amateur Operator's Certificate with Basic, Morse Code (12 w.p.m.) and Advanced Qualifications." That's all they say. Nowhere do they limit US or other foreign operators to the privileges they can exercise at home. Like I said, this is confusing stuff. BUT - Anyone who cares to dispute this *again* is welcome to quote the relevant Canadian regulation rather than merely asserting the contrary. Otherwise, I find that pretty authoritative.

At this point many people bring up the FCC, which is irrelevant for 2 reasons:

1. The FCC has no jurisdiction over amateur stations located in Canada, or the operators of those stations. If the Canadian government gives Generals the "Advanced + 12" privileges, that's their business. [If the Canadian government wanted to give those same privileges to anyone possessing a valid US passport regardless of whether a licence is held in the US, they could do that too!]

It is no good to say FCC rules bind Americans in Canada, because they don't: According to 97.5a, a licence is required by the FCC "where the amateur service is regulated by the FCC." A list of such places is in Appendix 2 of the "FCC Rule Book." Canada, not surprisingly, is *not* listed. Those who would like to dispute this are invited to cite their authority.

2. Even if that were possible, there is the small matter of the reciprocity treaty, TIAS 2508. It details procedures for ID, and then says:

Article III (d): "In other respects the amateur station shall be operated in accordance with the laws and regulations of the country IN WHICH THE STATION IS TEMPORARILY LOCATED" (emphasis added).

Treaties, of course, supersede FCC regulations and even statutes passed by Congress. (You can find the treaty on page 250 of the Rule Book. I went and looked up the entire thing in the library, and none of the rest of that treaty is at all germane to amateur radio.)

This should end it, but it won't.

Right on Matthew. I know of an American ham who was visiting Canada
and who checked into a net on 3750 LSB. On LSB part of your signal
is *below* 3750 and even visiting Canada, he ended up receiving a
nasty letter from the FCC. If the same American had had a Canadian
callsign, of course, he would have been ok.

I can't always tell who said what but whoever said a dipole has a gain of 2.14db over isotropic has to remember that that is in free space. A half-wave horizontal dipole over ground has somewhere around 7dbi gain depending on the ground. A half-wave horizontal dipole at a reasonable height has more gain than a quarter-wave vertical. A half-wave vertical has more gain than a quarter-wave vertical.

1150. SAREX Update 2/7 at 1:30 UTC

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-07 02:40:13 UTC
From: ABFHB@STDVAX.GSFC.NASA.GOV
Message-ID: <940206214013.21c25388@STDVAX.GSFC.NASA.GOV>
Source record: 271443

SB SAREX @ AMSAT $STS-60.008
SAREX Update 2/7 at 01:30 UTC

Since the last update, SAREX has successfully completed another first. At 10:42 UTC on February 6, Sergei Krikalev, U5MIR, initiated contact with a school group at the House of Science and Technology for Youth in Moscow, Russia. This represents the first time a cosmonaut on a U.S. space shuttle has communicated with a group in Russia. Leo Lebutin, UA3CR and Valery Agabekov, UA6HZ were the prime school group coordinators for this contact. During the contact Aleksandr Kaleri, U8MIR, gave Sergei greetings from Russia. Six students were able to ask their questions to the crew on the Space Shuttle DIscovery. In addition, several cosmonauts were on hand to hear the communications. The SAREX contact was also broadcast live throughout Russia on HF (80 meters, 40 meters and 20 meters) as well as VHF.

The packet robot on the Space Shuttle Discovery has been quite busy today. At last report, the QSO sequence number was nearing the 2000 mark. Many hams from around the world have reported booming packet radio signals from the Shuttle Discovery.

Those of you who have heard or worked the STS-60 crew and wish to receive a QSL card need to send your signal report and an SASE or an envelope and IRCs to the following address:

STS-60 QSL
Education Activities Division
ARRL
225 Main St
Newington, CT 06111

The official SAREX element set for today will be GSFC-005. This element sent was generated by Ron Parise, WA4SIR of the Goddard Space Flight Center. Gil Carman, WA5NOM reports that the predictions using GSFC-005 differed from GSFC-003 by approximately 2 seconds during orbit 50.

At Penn Wireless Association, we've been using logging software at Field Day for about four years now. At first only about three stations used it, but their performance was so much superior to the paper loggers that we shifted universally. Despite sagging attendance at Field Day, we're still fielding eight to ten stations primarily because the computer eliminates the need for a human logger.

As far as we're concerned, any learning problems are worth suffering through, because of the ultimate gains.

1152. Hamblaster update

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-07 14:33:04 UTC
From: jwa@tellabs.com
Message-ID: <1994Feb7.143304.26291@tellab5.tellabs.com>
Source record: 271451

The Hamblaster Update

Over the past several months I posted updates about a
DSP "The Hamblaster" that Will Torgrim (N9PEA) and myself
are developing.

We are focusing our efforts on a packet modem that allows
the user to improve H.F. reception by interfacing the Ham-
blaster (a PC compatable DSP sound board) to a transceiver
and a packet or all mode TNC. Modems/filters for RTTY,
Packtor, Amtor are also under developement and are compatable
with the same control panal software.

Here are the latest developements
1-31-94

1) External Power supply

I think one feature that separates the Hamblaster
from other sound boards is it's ability to run on
an external 12 volt supply. When a filter or modem
is loaded, You can turn off the computer and
Hamblaster keeps on going and going and going!

When it's connected to a PK-232, there's no need
to keep the computer on in order to keep the DSP
alive. Right now, my PK232/Hamblaster is runing
and it's been operating for about 5 days

2) Adaptive (LMS) filter

There's ongoing developement in this area. We are
planing (I don't think this has been done before)
to add controls to the LMS algorithm.

3) Fast autotune

We have a fast autotune routine that locks a packet
modem to the received signal in few milliseconds.
Tuning is a big problem on H.F. packet. Some stations
are so far off frequency, the tnc can't receive the packets.
The auto tune (or AFC) locks the DSP modem to the FSK
center frequency.

There's ongoing developement in this area. We are
planing (I don't think this has been done before)
to add controls to the LMS algorithm.

3) Soundblaster compatibility

The Hamblaster IS NOT soundblaster compatible.
It was designed that way so that it will run
independant of other sound boards. I can still
use my Soundblater to record sound, play music,
load software from the CD or use the midi interface.
At the same time, I can receive packets or use
a DSP filter with my Ham equipment.

The 3-Hr Ap Indices for 05 FEB 94 are: 13 7 17 59 31 22 16 34

SYNOPSIS OF ACT

Solar activity continued very low. Region 7664 (S11W34)
grew at a moderate pace and produced two mid level B-class
subflares. A strong arch filament system was observed here.

Solar activity forecast: solar activity should continue
at a very low level. Continued growth in Region 7664 could
result in an isolated C-class flare.

STD: A Yohkoh x-ray image showing the large size and spatial
extent of the below-mentioned coronal hole has been appended
to this report.

The geomagnetic field was mostly active until a major disturbance began near 06/1000Z. Major storm conditions ensued at mid latitudes and major to severe storm levels were detected at high latitudes. A Forbush decrease of approximately 5 percent was observed near 06/0600Z. The GOES 6 spacecraft at 85W experienced magnetopause crossings at 06/1620-1632Z and 06/1709-1713Z. The only source for this disturbance is a filament disruption on 01 Feb near S35E01. The forbush decrease and the severity of this disturbance argue against the early arrival of the coronal hole effects.

Geophysical activity forecast: the geomagnetic field should continue at minor to major storm levels for early 07 Feb. The coronal hole stream should establish itself in the Earth's vicinity during 07 Feb and geomagnetic conditions should moderate somewhat. Active to minor storm conditions are forecast for 08-09 Feb. Isolated periods at major storm are possible during that period for mid latitudes and high latitudes could experience periods at severe storm.

Event probabilities 07 feb-09 feb

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 07 feb-09 feb

A. Middle Latitudes
Active 35/35/35
Minor Storm 35/35/35
Major-Severe Storm 20/20/20

B. High Latitudes
Active 30/30/30
Minor Storm 40/40/40
Major-Severe Storm 20/20/20

HF propagation conditions were well below normal over most regions. The geomagnetic and auroral storming which has taken place over the last 24 hours has resulted in very poor to near useless propagation for transpolar and transauroral circuits. Even lower middle latitude regions (and some low-latitude stations) experienced fair to poor propagation. Conditions are expected to remain below-normal over the next 24 to 48 hours before gradual improvements set in, and no substantial improvements are expected until after the coronal hole related disturbance passes, which may not be for another week.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep

V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>author making a profit for writing an article and marketing his
>design, either.

Nor do I. However I think it unlikely that anyone will EVER get
rich by writing construction articles for QST. Unless they can
build a full-function HF transceiver for $100 :-)

> Our editorial policy is not driven by the
>author's profit level, or the amount a company advertises with
>us. But profit is not a bad word; I am sure that you expect to profit
>from your work; there is no reason someone else can't profit from

>theirs. There is a big difference between profit and profiteering.

Again, you seem to be responding to something which was un-said.
Why so defensive?

>I will not take your suggestion that we don't understand the real
>world as an insult,

Methinks you protest too much. Clearly you are responding as if you'd been
insulted, and your attribution...

> ...although it looks like you meant it that way.

...of intent indicates that you are once again projecting something un-said.

>You clearly don't have any personal knowledge of what any of
>us understand and which ones of us have our feet firmly planted
>on the ground and which have our heads in the clouds. I am forever
>amazed how some can see a problem, imagine what *must* be the
>only cause, and offer it to the world as gospel truth.

I have been reading QST (in current issues) since 1973. In back-issues,
since 1960. Is it still the official journal of the ARRL? Was it then?
I think I'm in a fairly good position to judge, as an 'average ham,'
just how in- or out-of-sync the League has been over the years.

>Greg, I just can't imagine how you could miss the ways the ARRL does
>do exactly what you are saying we NEED to do.

I'm sure you believe what you say.

> ...I don't know why you would make some of the
>unfounded claims about us that you do, but I won't make something
>up and offer it to rram readers as the reason.

Perhaps if you were, again, more in touch with the reality of it,
as opposed to the rarified atmosphere of ARRL HQ, of being a
staffer, and of the Field Organization, you would see the world
differently. But that won't happen. You've labeled it all as 'unfounded
claims,' so I guess you are safe in the Shrine of St. Hiram.

>After QST, we have books designed to help the ham get on the air and
>get started, ranging from the information in Now You're Talking,
>to our Companion series to the Operating Manual to some of the
>stuff in the ARRL Handbook. Sure, we actually sell the stuff, but
>if you compare the costs of our books to the technical books
>for sale in a "real-world" bookstore, you will see that, though
>we may be generating some revenue, we are not profiteering by
>any stretch of the imagination.

Ed, it is virtually impossible to have a rational discussion with someone
who persists in placing words like 'profiteering' in my mouth. It is
really offensive, and I wish you'd stop doing it. I am baffled as to
why you would think I've accused the League of 'profiteering.' The

ARRL is not out for profit. It is out to control Amateur Radio.

>: The no-code ticket was instituted to reduce discouragement. The
>: League fought it tooth-and-nail, until it was clear that the League
>: had lost.
>
>Where did this one come from? It just kinda' jumped out.

It demonstrates that the League is truly out of step, historically, with
the population which counts.... ....the sum of the sets EXISTING
radio amateurs and POTENTIAL radio amateurs.

>We were not the first on the bandwagon;

Now *there's* the understatement of the year!

>It was a tough call, and I can't speak with great authority about
>every detail. But I can tell you that it was not as simple as fighting
>until we lost.

I'm sure you believe this.

>No, I was correct; it is determined about our perceptions of what
>hams WANT to see. Imagining nefarious motives for our Directors
>doesn't make them so. And, point of order, the Board specifically
>does NOT influence editorial content; that is determined by the
>staff.

Uh huh. Isn't QST the 'official journal?' I don't recall ever seeing
a viewpoint which opposed the board presented. I don't really ever
recall a balanced presentation of an issue. What I do recall are
presentations of and justifications of the Board's position. Again,
I think it is a bit disningenuous to claim that QST is in any way
editorially independent of the Board. That, from my reading of some 30
years worth of QST, just won't fly.

>In summary, Greg, I suggest that you learn more about the ARRL before
>you rip us to pieces.

Yeah, I guess I'm just one of the rabble who doesn't know nuthin' 'bout
it. Never mind my membership. I'm apparently one of the 'them' to your
'us' 'cuz I dare to suggest that there might be REASON why there is
no clear majority of hams as members.

Gee, maybe I ought to call HQ and tell 'em to forget that 3-year renewal
I just sent in (thought about a lifer, but couldn't find the info anywhere).
After all, Ed, you've convinced me that there's NO WAY I'll ever be
competant to vote.

> There is enough real things to call us to task
>for; pulling things out of a hat

Are you looking for a list?

> will usually result in you embarassing
>yourself, as you have done here.

Funny, Ed. I don't feel embarassed. After all, I stated my position, and I stand by it. I wasn't the one arguing about points that the other guy didn't make.

> But we need dissenters who
>are willing to work at it,

As a member, I prefer *my* ARRL staff to refrain from labeling me either 'dissenter,' or 'supporter.'

>and pointing out better ways. We have a few on this forum, and
>I count some of them as friends. But those who jump to fast conclusions
>with little facts and less thought are not useful; they just take up
>our time and confuse the issues.

Oh. I see. Not only do I not know what I'm talking about, I'm 'not useful.' I lack facts (apparently because I disagree with your 'world view') and I don't think.

And I'm wasting 'your' time.

Well, I guess it's better than the 'You Are the ARRL' lecture.

I'll send the membership kit back by return post.

Greg

1157. Yaesu 990 HF Tranceiver For Sale

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-07 19:48:02 UTC
From: frede@microsoft.com
Message-ID: <CKvDoq.AIp@microsoft.com>

I have a slightly used, 5 month old Yaesu 990 HF rig. It
contains all manuals (including the optional service manual),
the original box, and original stock accessories.

I have performed the factory modification for general
coverage transmit (easily reversable). The radio is in new condition.

Reason for sale: I find I need the operating features of the
Yaesu 1000 rig, so I need to upgrade.

Price: $1600 including U.P.S. ground shipping.
Phone: 206-936-2520 (Office)

i live in Dayton and have gotten word from
some Hamvention committee types that a change
has been made in the free buses this year.

there will no longer be service available from
individual hotels to hara arena. however, free
shuttle service will be provided from the usual
satellite parking areas: salem mall, forest park
plaza, air force museum, meijers in englewood,
mendelson's, and so on.

i believe that this information is accurate, but
am not associated with the transportation committee
of the dayton hamvention.

There was a note from someone who was going to Belize for rain-forest studies this Spring. I believe the note appeared here in November or December. I am unable to locate the note in Archives. Does anyone remember the note, the person, or how I can contact her?

Paul Marsh N0ZAU pmarsh@metro.mccneb.edu

>a break - he'll change his ways. You all know my opinion of the matter...

I'm flattered that Jeff sees fit to mention me, but he's grossly misrepresented
my views. For anyone who cares, they can go peruse the mail archives on
ucsd.edu and re-read the entire discussion, but I'll save anyone who cares
a few minutes by quoting a note that I wrote, that more accurately expresses
my views that Jeff Herman.

>
>Geez, it's no wonder why 2 meters in Southern California is such a
>mess; I guess the blind ultra-liberal type of thinking Californians
>are so proud of has found its way to the ham bands.

Well, since you want to make it personal, Jeff:
Hmmm... I didn't know the blind-ultra-fascist-hang-em-without-a-trial
type of thinking dictators are so proud of has found its way to Hawaii.
Maybe you ought to study civil rights and due process before you
start calling people outlaws.

>Shoupe is an admitted law breaker - he stated he ran a pirate radio
>station - thus he broke federal law - that's why I've referred to
>him as an outlaw. Has the statute of limitations run out for him?
>Probably not. Therefore, the feds could come knocking on his door
>tomorrow and arrest him for his crimes. But in your eyes he's done
>no wrong.

Don't be a dolt. You can't see through my eyes, you don't know how
I think, and you refuse to understand. Shoupe *says* he once ran a
pirate radio station; without other evidence, I'd have a hard time
convicting him of a crime. Do you get it, Jeff? In my eyes, I haven't
seen the evidence required to declare Shoupe a criminal. Can you see
that Jeff? I'm not the ultra-liberal you accuse me of; I consider myself
a moderate, and I try to see the big picture before I convict people.
But, no, Jeff is ready to through due process out the window and be a
complete fascist amateur radio weenie. Wonderful.

By the way, you seem to know nothing but what you've been told about
Southern California radio. I use 2m in Southern California, and it
is not the mess you would like to portray it as. Yes, there are repeaters
that are largely populated by controversial types, Yes, there are people
that break the rules, yes, in an area with 10 million people 2m is
congested in some places. However, I have 12 amateur channels programmed
in my Motorola that are *not* congested or jammed, so what the heck is
your point?

>Dana, do the criminals in your state a favor: become a judge! :)

Since you want to make it personal, Jeff, and since you are unable
to discuss things intellectually before you launch into personal
attacks, etc., chew on this:

Jeff, do the innocent people on Usenet a favor: don't become a judge!
Leave the "outlaw" rhetoric alone! Just go back to posting yet more
QRP transmitters to rec.radio.amateur.homebrew.

>Alright Gang, I'm on my way to the airport for 3 weeks of snow
>(we never see that stuff here in Hawaii except up on Mauna Kea
>at the 15,000 foot level); I hope you all have a very very
>wonderful Christmas or Hanukkah; please drive safely.

Enjoy yourself in Tahoe; I'll be a couple of hours drive away,
in case you want to get together and call me ultra-liberal to
my face :-) Leave me a voice mail note at (310) 348-6043 with
a number to reach you.

Dana

1166. Re: PK-232 vs 1278 ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-08 00:24:07 UTC
From: slay@netcom.com
Message-ID: <slayCKvqG8.8xs@netcom.com>
Source record: 271468
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Just for fun, here is a bulletin I received a little over a year ago from KH2D@KH2D in Guam entitled *The Ultimate PK-232*:

After reading a bulletin about modifying the PK232 to perform better on AMTOR, which was a reprint of an article from QST magazine, I thought it would be a good time to distribute one more mod for the PK232. The above mentioned article stated that the "PK232 performed BETTER than COMMERCIAL AMTOR equipment". As we say on the ham bands, "hi hi ..... "

The following MOD will make the PK232 work MUCH better in these areas:

1. Improve SENSITIVITY on HF and VHF.
2. Greatly improve the TUNING BAR GRAPH DISPLAY.
3. Get rid of the common RF PROBLEM in the PK232.
(symptoms of this very common problem are: your PK232 sounds like a duck call on HF).
4. Make the PBBS more compatable with full service BBS's.
5. Add remote control of TNC parameters.
6. Add NODE capability.
7. Allow simultaneous use of VHF and HF ports.
8. Add AMTOR mailbox capability.
9. Add FULL DUPLEX capability.
10. Operate PROPERLY in the KISS mode.
11. Add GATEWAY capability.
12. Add SOFTWARE CARRIER DETECT.

This mod can be performed by the average ham very easily with no soldering required and a minimum number of tools.

Please follow these instructions CAREFULLY:

1. Power OFF the PK232.
2. Remove ALL cables connected to the PK232.
3. Grasp the PK232 FIRMLY in your RIGHT HAND (left hand is OK if you are LEFT-HANDED).
4. Carry the PK232 to the nearest trash can and hold it directly above the aforementioned trash can.
5. Drop the PK232 into the trash can.
6. In the space the PK232 used to occupy, install a KANTRONICS KAM with 5.02 (or later) firmware. (After completing this step, you will notice you have MORE SPACE on your shelf or tabletop).

CONGRATULATIONS !! You have just modified your PK232 so that it is now the BEST ALL MODE DATA CONTROLLER available.

An option to steps 3 thru 5 in the modification instructions would be to sell the PK232 to another ham (preferably someone who doesn't know where you live, a new novice operator, or someone you don't like).

For those hams who don't have a PK232 installed at their station, skip steps 1 thru 5 in the above instructions.

The above mod has been thoroughly tested at KH2D BBS and has performed FLAWLESSLY for the last 7 months (multi-user, multi-port).

KH2D assumes no liability for hams who make this mod and can't hit the trash can. CAUTION: the PK232 is so BIG and CLUNKY that it can cause broken bones in your foot. Children should NOT try this modification without the assistance of a responsible adult.

KH2D grants full permission to the ARRL to reprint this modification in QST.

I would also like to express my sincerest thanks to the gentleman who spent his time retyping the article from QST magazine so that hams everywhere who don't receive their very own copy could enjoy it. But I would ask that for his next bulletin he chose a magazine where the technical findings are not based on the amount of advertising dollars spent by the equipment manufacturer.

73, Enjoy the DIGITAL MODES,
Jim KH2D @ KH2D.GUAM.USA.OC

1167. Re: Spark Gap Transmitter

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-08 01:27:36 UTC

Jeff Herman (jherman@uhunix3.uhcc.Hawaii.Edu) wrote:

: TSB xmitter

with a spark gap in the antenna circuit, driven by a power oscillator at
RF, with the implication that the spark will generate a significant
amount of energy away from that already produced by the oscillator.

I'd like to point out that this goes counter to the way spark transmitters
work--that is the ones folk actually used for communications. There was
a good article a month or two ago in "Wireless World", part of a continuing
series on radio history, on the age of spark transmission. The spark
should be thought of as a switch, which simply connected the circuit in
a way that let it resonate and feed that resonant energy to an
antenna. While the tank was ringing down, the plasma of the spark
offered a very low impedance path for the tank current. At RF, the
plasma is continuous and offers a very low dynamic impedance to current
flowing in it. Maybe someone will actually build the suggested
circuit and check it out with a spectrum analyzer; it should be
trivial to short the spark gap (while the power is switched off,
of course ;-) and retest to see if there is any significant change in
the spectrum. Scott?? ;-) ;-)

SB SAREX @ AMSAT $STS-60.012
STS-60 Western R/S Times 02/08

Below are the rise and set times for STS-60 for selected US cities
over the next four days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your
local PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

STS-60 will be visible from far northern latitudes for the next several
mornings. If a shuttle pass occurs less than one hour before your local
sunrise time, but before the morning twilight is too bright, the shuttle
will appear as a bright star moving across the sky. If a pass occurs
exactly one hour before sunrise, the orbiter may enter daylight while
overhead, appearing suddenly out of the darkness.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer
set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

1169. Skywarn Spotting Frequency List Updated

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-08 02:59:02 UTC
From: capskb@alliant.backbone.uoknor.edu
Message-ID: <2j6v5m$6pg@romulus.ucs.uoknor.edu>
Source record: 271471

I've completed the latest round of revisions to the frequency lists
and Chris Novy has posted the updated lists at the usual source.

1) Storm Spotting Frequencies: SPOTFREQ.DOC
Ham radio and Civil Defense frequencies which have carried useful info
during severe weather are listed, primarily in the 2m band. The list
focuses on the Plains States where most of the mobile spotting is done.
The area is roughly within a line from E. Wyoming to Indiana to
Alabama to SW Texas to Wyoming.
Join your local Skywarn group and serve -- your reports are valuable.*

2) TV radar info: CHASE-TV.DOC
VHF TV stations and UHF repeaters are listed, along with comments
about radar and weather warning display capabilities (where known).
The Plains States are covered. The area is roughly within a line from
E. Wyoming to Indiana to Alabama to SW Texas to E. Wyoming.

The lists are available via ftp:
ftp vmd.cso.uiuc.edu
login: anonymous
password: your email address
cd WX
get SPOTFREQ.DOC
get CHASE-TV.DOC

A recent IP number for vmd.cso.uiuc.edu: 128.174.5.98

University of Oklahoma users can obtain a copy via metgem or
geohub at users:[kbrews]spotfreq.doc and chase-tv.doc.

Any further additions or corrections are welcome. E-mail to me
at the address below. To keep the work load to a finite size,
the area restriction will be maintained.

***This year we are particulary interested in getting up-to-date
information in the area of a field project:
North and West Texas, Oklahoma, Southern Kansas, and the Texas
and Oklahoma panhandles.***

t1terryb@cascade.ens.tek.com (Terry Burge) writes:

> Talking about morse code copying, I had a friend of mine in the Army Security Agenc
[Stuff deleted about copying fast]

I've often wondered about copying with a typewriter. Had a cousin in the
Navy, could copy 60-65 WPM with a typewriter. I've tried but the noise
of the machine (key clicks) interferes. If I use a headphone that elimnates
the keyclicks, the "feedback" (auditory) goes down, and accuracy suffers.
If I make a mistake, hearing an "J" instead of a "1" for example, its not
so easy to correct, as by hand.
BTW, I'm not listing to 65, only 30, but its too tough to take by hand, and
word recognition is extremely limited. Perhaps I'm in a sort of speed-
twilight-zone. Any suggestions?
Richard Barnaby (AA1IB) barnaby@world.std.com

1174. Yaesu FT-5100 <-> MFJ-1270B

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-08 13:32:25 UTC
From: plymale@myhost.subdomain.domain
Message-ID: <2j8499$i8p@solaris.cc.vt.edu>
Source record: 271475

I'm trying to interface a Yaesu FT-5100 to a MFJ-1270B TNC via
the 5100's DATA IN/OUT jack. I constructed a connector based on
the instructions in the 5100 manual. The problem is that the
transmit audio level out of the TNC is way too low. Adjusting
trimpot R76 during the 1270B recalibration procedure does not help.
Any suggestions for increasing transmit audio level are appreciated.

Thanks...

1175. 1974 Fox Tango Newsletters needed (Yaesu)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-08 13:53:05 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94Feb8135305@mipgsun.mipg.upenn.edu>
Source record: 271507
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.misc

I have ordered (as part of a group purchase) the Yaesu FoxTango newsletters from IRC. Unfortunately, the 1974 newsletters are no longer available. I would like to obtain copies of the 1974 newsletters. Does anyone have them? I would be more than happy to pay for copying charges.

1176. MICOWAVE OVENS

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-08 14:17:00 UTC
From: bob.hilton@chaos.lrk.ar.us
Message-ID: <39301.85.uupcb@chaos.lrk.ar.us>
Source record: 271476

to:all@rec.radio.amateur.misc
This may not be exactly the right group to ask, but I figure somebody here has the answer. My employer just bought a new microwave oven for the breakroom; it's a home-style (not commercial grade) Magic Chef. I was surprised to see this warning on the front cover of the "Use and Care" booklet:
"YOU MUST REGISTER YOUR MICROWAVE OVEN
The Federal Government requires that records be filed on the location of all microwave ovens. A registration card, packed inside this oven, is used to track the location of our micro-wave ovens. ... If you bought this oven from a previous owner, please establish your ownership by writing to: [address]."

The address given matches that of the Magic Chef company, not some Gov't office. So my questions are:
1. Is this a real law?
2. What if I don't register? Will OSHA, if they EVER visit, slap our hands?
3. If we worked in New Jersey, could we be fined for tax evasion (not registering an RF emitter)?
4. Is this for safety recall purposes?
5. Or is this a sneaky way to add our name to somebody's mailing list?

Bob

>If you compare a vertical over an infinite ground plane to a dipole
>(or any other antenna) in free space, you are comparing apples to oranges.

True.

>When thinking about antenna gain, it helps immensely to remember the
>principle of conservation of energy. Nearly all full-sized antennas are
>essentially 100% efficent. That means that a dipole, a vertical, a
>rhombic, a Yagi beam, etc. all radiate 1 watt for every watt applied
>through the feedline. To obtain gain, the antenna directs more of its
>signal in one direction and less in another.

I'd argue that a quarterwave vertical over real lossy ground doesn't
fit the idea of 100% efficiency very well. It expends quite a bit of
it's energy warming the earthworms in the lossy soil making up it's
current mirror. (IE half the "full size" antenna in this case is really
a current reflection in the lossy ground.)

>Any antenna over an infinite ground plane has a 3 dB (2x power) advantage
^^^ emphasis added
>over an antenna in free space. That's because it only has 1/2 of all
>possible directions in which to send its signal.

Over an infinite *perfectly reflective* ground plane. Over lossy ground,
that 3 db is reduced by ground losses, though some gain remains. The
more you can improve the ground plane, the closer to the ideal 3 db
you'll approach.

>Consider a vertical dipole in free space. You could insert a horizontal
>infinite ground plane at the feedpoint without changing the radiation
>pattern. Now you have two verticals, one pointing up, one pointing down.
>Each vertical radiates half the power of the original dipole.

True because each has half the current that flows in the entire dipole.

>Note
>that the upper vertical (over a groundplane) can generate the same
>field strength as the dipole (in free space), but with only 1/2 the power.

No, I disagree with the way you're saying this. The upper vertical in
this thought experiment has half the current of the dipole and so generates
half the field. The ground mirror is supplying a 3 db reflection gain that
makes up for the lower field produced by the current in the upper vertical.

>So a 1/4-wave vertical over an infinite ground plane has 3 dB power "gain"
>over a dipole in free space.

True only *if* it has the same current flowing in it as the dipole. IE
the current flowing in the quarterwave vertical is 2 times the current
flowing in *half* of the free space dipole. (True for constant power input
to both antennas since the base impedance of the vertical is half that of
the dipole.) That, with the phantom mirror current in the ground plane,
has the same effect as would doubling the current fed into a dipole in free
space, thus the 3 db gain.

I think we're trying to say the same thing, but looking at it from a
slightly different perspective.

>Now consider a dipole suspended a half wavelength or more over an infinite
>ground plane. In some directions, it will have 6 dB gain over a dipole
>in free space, which gives 3 dB gain over the vertical. In other directions,
>the field will be zero. If you averaged the radiated power over all
>directions (half sphere), you would find it sums to the same power as the
>1/4-wave vertical (also averaged over all directions.)

True, but gain in the main lobe (what we normally mean when we talk about
gain) is 2X that of the vertical. And in the real world of lossy ground
planes that make poor current mirrors, the horizontal dipole has a greater
efficiency. A vertical halfwave, that doesn't need the current mirror,
will also have greater efficiency than the quarterwave over real ground.

>

I had forgotten the weather resistance issue. But you're right in that most land-mobile radios tend to use SO-239 instead of N. But buy a UHF repeater and guess what, N connectors. By the way, I've finally met an N connector that I like. It's for the 9913 and it's GREAT! You don't have to comb out braid, you don't have to go nuts with 9 different parts, etc. This one is two pieces, you strip the coax down a bit, screw it in, use a bit of solder and you're in business.

I also have a friend who was a Navy radio intercept operator in WWII.
There's no such thing as copying behind in this sort of work. It's all
five letter groups of encrypted text. He was trained to associate a
letter sound directly with a finger action on the keyboard, a form
of Pavlovian conditioning. His conscious mind isn't involved at all.
He can carry on a conversation with you while copying. When the code
stops, he has to roll up the paper and read what he typed to see what
the other operator sent. He's a remarkable code copying machine.

He says that if you try to copy plaintext behind with a typewriter,
it's much harder than copying in real time because the actions of
auditory recognition, conscious evaluation, and mechanical reproduction
are divorced from each other enough by that intermediate step to cause
you to make errors if your mind wanders, in the slightest, to thinking
about what's being sent. He says you should train yourself to *not*
try to interpret what's being sent as you copy if you want maximum
speed and accuracy of copy. Try thinking about *anything* but the
code you're hearing while you practice copying. Let the conditioned
reflex do the work.

That's *not* the way most hams do Morse. Most try to force the
decoding into resembling spoken language, (which it's not, who
speaks by spelling out each word?) and attempt to copy in their
heads. At best they write down what they *think* they understood
of the decoded message rather than just accurately copying the
characters as received without trying to understand the message
until it's down on paper. Naturally that impairs the speed and
accuracy of their copy, but since accurate copy isn't really
their goal, that's a moot point except for message handling and

taking tests where accuracy of copy is the critical issue.

I wish I'd known this when I was learning Morse. I kept futilely trying to make sense of what I was hearing, and got nowhere. I finally hit on a shorthand method of writing down the Code that works for me, and which I can sight read nearly as well as ordinary text, but I wish I'd conditioned myself to type the text instead since it would be much faster.

Gary

David Tucker wrote:

Well, your US licence is good in Canada indefinitely, as
long as it is valid, as far as I know. If you become a
landed immigrant, and wish to obtain a Canadian licence,
I have been told by a government official that you must
pass all the exams. I have also been told by Rich, who
went through the process, that you can get credit for
code and theory and will only have to pass the rules exam.

I'll assume "Rich" in the above refers to me. I can confirm from personal experience that when I applied for a Canadian amateur license last year, I was given full credit for the Canadian "Basic", "Advanced", and "12 WPM" qualifications on the basis of my US "Advanced" license. I was required to pass a 26-question exam on Canadian amateur rules and regulations, but that was all.

Canadian rules also require that reciprocal operators from
the US be not only US citizens but US residents, too.

This is indeed the way the rules read. I was told by Canadian officials that no one would really mind if I operated up here for a while using my US call -- but that since I was a landed immigrant, I "should" eventually get a Canadian license.

Incidentally, I've retained my US amateur license even though I now live in Canada. Since the FCC won't accept a non-US address, I sent in a Form 610 and changed my address to that of my parents in California. If anything ever gets sent there, they'll forward it to me up here.

Unlike US rules, Canadian rules do not explicitly void
reciprocal privileges upon taking out Canadian citizenship.
You could therefore make a case that that means, as long
as you retain US citizenship, your US licence is valid in
Canada.

Please be careful here not to fall into the fallacy of assuming that US and Canadian citizenship are mutually exclusive. Contrary to popular belief, US law does =not= ban dual citizenship; and, for that matter, neither does Canadian law. Lots of people are citizens (by birth or by naturalization) of both the US and Canada; the US State Department knows about them and explicitly doesn't mind. If anyone is interested in more info on this subject, I'll be glad to oblige.

I think that there is one down side to this approach. Apparently, visual code,
aural code copied in head and aural code copied on typewriter involve
different parts of the brain and do not transfer well from one to another.
I recall a story, firsthand, from a signal corpsman in Korean PA who
copied code directly onto a typewriter but did *not* know what he had
received till he read the copy. To make short of a long story, the skills
for typewirter copy may be different from that for head copy. The latter
skill is useful, especially for mobile cw.

1182. RF? problem with TS-440...need advice

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-08 16:29:23 UTC
From: mebly@eng.umd.edu
Message-ID: <2j8el3$2hd@mojo.eng.umd.edu>
Source record: 271483

A local ham is having an odd problem with a TS-440. Usually, when the transmitter is keyed on 15 meters, the radio IMMEDIATELY shuts itself off. It is necessary to turn off the power supply to the radio for several seconds before the radio will turn back on. On occasion, the radio will work fine on 15 meters.

This happens on SSB also, and at low output power levels. The shutdown when using SSB is not immediate...it takes several seconds. It does not occur when the radio is connected to a dummy load...just when it is connected to a dipole in the attic. The SWR on 15 meters is reasonable.

The symptoms do not occur on 10, 17, 13 or 10 meters, even when the SWR on the coax is very high.

I've seen RF problems cause transmitters to lock up, but I've never seen them immediately cause the radio to turn off. Can anyone offer any insight?

If it is RF, I hope to be dealing with the MIC cable, the KEY line or the power supply. My first brilliant idea is to try a 15-meter counterpoise connected to radio ground.

Thanks in advance for your advice. 73.

Source record: 271486

I live in a condo that has a lot that is just too short to put up a 40 meter dipole (and the homeowner's association made me take down the vertical). Does anyone have any plans for a 40 meter transmitting loop? I've seen some that are compact, made of copper pipe and are capable of multiband operation. I've also read that they tend to cancel out atmospheric noise.

Any input would be appreciated.

Yep, with this bastardized "N" connector, you get all of the bad characteristics of a PL-259, and none of the good characteristics of the N connecter. A really fine connector!

(Hint, the worst things about the PL are soldering the braid, and lack of weather resistance. The best things about the N are the solderless braid connection, the physical strength, and the weather resistance.)

Source record: 271489

I'll admit to not having followed this thread, (not really my fault, the host was down all weekend and some postings got lost to the cyberspace bit bucket).

I've seen Ms. Cormann's posting on every net I get here, and I get 5 of them. While I really didn't pay attention to it, I did notice the 11 meter linear, (if there was anything else that was illegal on the list, I don't remember or care).

It seems that the only place where some selfrighteous individual took offense to the linear offer was here on the infamous Usenet. Well to that person I say, put your money where your mouth is! If you don't want such an illegal device sold to an CBer, then outbid for it yourself and modify the circut back to 10 meter capabilities. What would it take? Snapping off the extenting loops from the coils and reattaching the lead wires?

I get sick and tired of some of the god playing, government enforcing a--holes around here who think they have to police the spectrum and save other hams from the temptation of using illegal equipment.

Actually it makes me feel good that a few repliers had the good sense of satire when replying what looked like surportive statements. It sort of makes me remember when back on Prodigy we had a guy who would deliberately bait those radio-cops with requests for 80Kw linears and dishes large enough to direct a 2m signal to Europe. We all knew Scott was puting out a parody, but we all got reals laughs at the replies he would get from members who took him seriously.

Now what was this other micro byte of history about a 5kw AM transmitter for use on the ham bands? Hell if he keeps the power down below 900 watts or 2.2Kw P.E.P. on sideband, he's still legal no matter what kind of transmitter he's got. Hell, with that modulation transformer, he'd really sound good on AM, provided he wants to foot the electric bill, (broadcast transmitters are notoriously inefficient, especially at low power).

to which NADO@UNB.CA replied:

. . . there is no such thing as a Rule exam. There is a Basic
exam and an Advanced exam. The Basic has 100 questions, with
multiple choices, and covers rules, basic theory, propagation,
interference, etc. You need 60% to pass.

Yes and no. (I was the "Rich" referred to in David's article, BTW.)

When I applied for my Canadian amateur license last spring, I was
required to pass a 26-question subset of the Canadian "Basic" exam,
consisting only of questions on rules, regulations, and operating
procedures.

I was =not= required to do the entire 100-question Basic exam, because
I had a US Advanced-class license. I received credit for the Canadian
"Basic", "Advanced", and "12 WPM" qualifications on the basis of my US
license.

:
Probably referring to the fact that after April (26th.?) 1994
scanners with cellular reception or that are easily cellular-modifiable
will no longer be approved for manufacture by the FCC, and will no
longer be allowed to be imported from outside the US. Manufacturers
and Retail stores (like Radio Shock) WILL still be allowed to sell their
remaining stock of those scanners after that date, they just cannot
manufacture them. Also, it is (as I understand it) still NOT illegal
to own such a scanner, or to modify an existing scanner. It is however
illegal to listen in on cellular phone conversations with such
a scanner. Beware of the marketing hype as we approach April. Plenty
of electronics hucksters are more than willing to scare you into
buying a "pre-Law" scanner. There will be plenty around for some
time after April, I am sure, not to mention used ones for sale.
It will in my opinion be a while till they become a rarity.

> receive Morse code at a speed of at least 12 wpm has all
> the privileges of the Basic, 12wpm, and Advanced quali-
> fications. Which means they can operate all modes on
> all bands, just like I can.

Those are the Canadian regulations. But what about the US regulations? Do the US regulations permit a US amateur, operating under his US call outside the US, to operate in any mode or band permitted by the country he is operating in, even if such operation would be illegal in the US? Or, is there some specific provision in the FCC regulations that permits such extra privileges specifically for US hams in Canada?

To take a simple example, Canadian rules require station ID's every 30 minutes, and the ID can be in either English or French. US rules demand a station ID every 10 minutes, and it must be in English. If a US ham in Canada were to ID himself every half hour, and only in French, this is perfectly OK as far as Canada is concerned, but is it OK as far as the FCC rules go?

Even without bringing up issues of extraterritorial jurisdiction, the FCC could presumably sanction an American amateur operating abroad in violation of US rules -- e.g., by revoking his US ham license. So this question is hardly moot.

<snip>

I think that you have this backwards Gary. All hams use plaintext
(by law) and you can copy at higher speeds if you can use your
vocabulary information to speed up. In all QRQ tests that I have heard/read
about, the limit for ramdom group copy is always lower than that
for *correct* plain text copy.

: > For SSB contacts: QSL to AA6BB; For CW contacts: KA6V
: > This is a husband/wife team at the same address.
: >
: > 93787 Dorsey Ln
: > Junction City, OR 97448
: >

: Do RTTY QSLs go to the same place?

SSB ONLY to AA6BB; CW, Satellite and all other digital to KA6V.

According to Chod VP2ML/WB2CHO in an article in the January/February 1994 issue of his The DX Magazine:

Quote: With a donation of $50 or more, you will receive a copy of WHERE DO WE GO NEXT? by Martti Laine OH2BH. Unquote.

Lastly, there is this info taken from January 24th issue of the Ohio/Pennsylvania DX Bulletin (#144):

3Y0PI, PETER I ISLAND DXPEDITION. As the countdown continues for the start of this DXpedition, here is some important information: KA6V and AA6BB, are the QSLManagers and they ask that you put "ALL" your cards into the same envelope or put all your QSO labels into one card. "DO NOT" (repeat DO NOT) mix VP8BZL and VP8BZL/MM cards with the 3Y0PI cards (send them separately). Mixing operations in the same envelope will cause a delay in processing your QSL cards. Include a SASE or SAE and enough to cover at least the return postage. The 3Y QSLs will be printed in Belgium and have the same layout as the AH1A and VP8SS I cards (folding type with colored pictures). There is room for 5 QSO's per 3Y-card. If you have more than 5 QSOs, more cards will be needed, and the cost of postage will increase (So, remember send enough to cover this!).

NOTE: There is a DX reflector available on Internet. Simply send your email request to: DX-request@unbc.edu

The one and ONLY word in the text/message field should be:

SUBSCRIBE

Please note that the DX reflector is NOT where you ask for QSL route information. They are highly discouraged there. QSL route requests are probably best handled here on rec.radio.amateur.misc

I've seen folk curse at N connectors on 9913. It appears to me that the
9913 doesn't provide very good support for the compression gland in N
connectors, since the line is essentially hollow and made from (soft)
polyethelene. The N connectors I've seen sold for it are what I'd
call "short-barrel." You can get longer barrel ones that offer better
support for the line, and I find they stay on much more securely. You
have to do the center pin mod yourself to get them to accept the
larger center conductor of the 9913. (Sorry, I don't have the UG numbers
in front of me...)

: work fine on 15 meters.

: This happens on SSB also, and at low output power levels. The shutdown
: when using SSB is not immediate...it takes several seconds. It does not
: occur when the radio is connected to a dummy load...just when it is
: connected to a dipole in the attic. The SWR on 15 meters is reasonable.

: The symptoms do not occur on 10, 17, 13 or 10 meters, even when the SWR on
: the coax is very high.

: I've seen RF problems cause transmitters to lock up, but I've never seen
: them immediately cause the radio to turn off. Can anyone offer any insight?

: If it is RF, I hope to be dealing with the MIC cable, the KEY line or the
: power supply. My first brilliant idea is to try a 15-meter counterpoise
: connected to radio ground.

: Thanks in advance for your advice. 73.

No problem into the dummy load is a good check...the transmitter is probably
good. Your first brilliant idea is probably a GOOD idea. The problem soulnds
like a resonant ground ... I had a problem with bad audio on 20m, fine on
other bands. Since I was not operating much at the time, I just didn't
operate 15m. Once I got around to thinking about the problem I found my
ground wire to be around 16 foot long...oh, well, win some lose some.

I don't think the problem is the mike or key lead...I favor the ground more
at this point.

Has anyone heard the shuttle on 2mtrs? With 3 hams out there and
a broken satellite, perhaps they have some time on their hands.
Or just too busy trying to fix it. Where Do I listen? 145.55?

I've heard them transmitting packet Saturday and Sunday (I'm pretty
sure it was them -- I don't copy 1200 wpm in my head that well -- but
they came in and faded out at the right times). I didn't hear anything
yesterday or this morning, though.

Listen on 145.55. Do NOT transmit on that frequency. If you hear
them on voice, call on one of
144.91 144.97
144.93 144.99
144.95
but you'll have to guess which one. If you hear them on packet, call
W5RRR-1 on 144.49. Again, do NOT transmit on .55.

(On the other hand, Russian space station MIR is still up and the hams
on board do use 145.55 for both voice and packet, and they operate
simplex. Confusing, isn't it?)

Hope this helped

I tried one, and it tended to melt down everything. You need more concentrated heat.

By the way, be careful when comparing soldering irons and soldering guns. A 100 watt soldering iron is turning all 100 watts into useful heat. But a 100 watt soldering gun is losing maybe 20-30% of that power in its transformer. Also, if you have even slightly imperfect connections from the element to the gun, you lose even more power.

I ended up my gun and a 40-watt iron at the same time. Also remember that the cheap nickel-plated connectors are harder to solder than the silver-plated ones.

>definitely the best.
>...

I personally prefer a crossbow. I drill out the end of an aluminum
bolt with a 1/64 bit, tie off some 20-30lb fishing line (using the
Zebco 202 spinning reel), sight over the limb (bow has a scope mounted
on it), and *twang*, over it goes. Bolt has enough weight to cause
it to drop to the ground.

A couple of notes, in addition. I prefer a heavy nut to a stone, as it's
easy to tie to, and seems to have reasonable ballistics. It's also heavier
than a size for size stone. You have to select a weight fairly carefully.
Too heavy, and the slingshot can't throw it far enough, too light, and it
won't drop over the limb. Pine tree are especially a problem because the
line will hang in the bark flakes.

SO-239, PL-259 provide a loss of approximately .5dB per connection at 145Mhz and a poor 50 ohm connection. Time Domain Reflectometer measurements indicate over 2:1 VSWR (Impedance Bump!) at the connection.

Whereas N connector's have appr'x .042dB Insertion Loss and an excellent 50 ohm connection.

Basically use SO-239, PL-259 below 30Mhz. I still wish manufacturers would use N connectors on all gear. I find them mechanically and electrically better all around.

I found the butane torch to be overkill... exploding the solder into a vapor. What I favor is the use of copper tape... fan back the braid, wrap copper tape between the inner insulator and the braid and then solder the braid to the copper tape. Then solder the copper tape to the coax connector. This may change the impedence slightly (could be for the better :-)) but the soldering is extremely easy as the copper tape can be used for a snug fit inside the coax connector, and the coax connector can also be soldered to the copper tape at the base of the connector. This works well on 9913 and pl259s.

The small ones, like the Pyropen Jr. and the Portasol don't work as well as a large iron. The Pyropen Sr. works fine, even in the wind. When AC is available, however, I use a 300 watt American Beauty.

To Mark Curran,
Sorry about the way I have to reply to your Email. I can't directly
replay out of my account to the Internet at Tek so when someone sends me
mail I have a time sending directly to them. I have to start up 'read
news' and then read in the message. Probably a way around this but I have
not figured it out yet. Then there is the problem of remembering not to
make my lines in the post too long...I'm learning.

Terry

To: t1terryb@cascade.ENS.TEK.COM (Terry Burge)
In-Reply-To: t1terryb@cascade.ens.tek.com's message of 4 Feb 1994 14:29:13 -0800
Subject: Re: Vertical Antennas
Content-Length: 523

Hello Terry,

Hope you don't mind radion mail cluttering your disk.
I noticed in your post on verticals that you have had some
experience with homebrew groundplanes. I'm considering
one for either 20 or 40 (thought I'd start small) to try and
get a lower radiation angle than my centerfed ant.

I'm mostly curious as to materials for the vertical member,
and what your experience has been. I'm condidering either
cooper tube or aluminum conduit.

Most height I can get is about 25' on top of my roof top.

Tnx,

Mark C.

Hi Mark,
My vertical is a Butternutt HF6V made of aluminum and trapped for 10-160 meters. It
is approximately 26 feet high. If you are going to build a single band vertical for 20 or
40 meters it isn't too hard. I suggest either aluminum tubing or possably(sp) slip together
TV mast like you can buy at Radio Shack (Rohn, I believe). For 20 meters you can easily
make
a quarter or 1/2, or even 5/8 wavelength ground plane. Quarter I believe is somewhere
around
16 feet. A true ground plane antenna, one that is over 1/2 wavelength above ground, is
suppose
to need only five or so radials. My installation is on a mobile home so I try to improve
things
by adding 8-12 radials for 10,12,15,17,20 meters, 8 on 40 meters. A quarterwave on 40
meters is

about 32 feet so that may need to be loaded with a coil to give you the resonance. If I were you I
would definately look into buying a Butternut HF2V(think that is what they call it. It is for 80, 40 and 20 meters and can have 160 meters added.) But like I said, a 20 or 40 meter quarterwave vertical is fairly easy to build.
The ground plane on my antenna is made of galvanized electric fence wire. A spool of that stuff is one of the best investments a Ham can make. Only cost about 8-10 dollars for a
quarter mile roll at your local farm store or Bi-Mart, whatever. Cut the radials for 1/4 wavelength at the lowest frequency on each band. Some people say 5 % longer than the 1/4 wave
radiator. Either will do. Just lay your radials out as evenly as possible deviding up 360 degrees
so that you get as clean, semetrical a pattern as possible.
Depending on weather you make a 1/4 wave or 1/2 or 5/8 wave, you will need to come up with a matching system. The ARRL Antenna Handbook is the place to go and find that info. I believe
for 1/2 wavelength you will have a high impedance input and may not be able to feed it directly
with coax without some sort of impedance matching device. 1/4 wavelength verticals have somewhere
between 36 and 52 ohms. Feeding them with coax is no problem usally. Your radial system has a significant effect on feed point so you will probably want to read chapters 2 and 3 in the
antenna handbook. That book is also a good investment.
Good luck and let me know what you decide and how it works out. When I first got into Ham radio back in 76 I put up a 1/4 wave groundplane for 20 meters on a mast of that slip together
TV mast I told you about. The antenna was very similar to a CB supper maggy or whatever they call
them. Worked very well getting out but like all radials, it was subject to static interference.
The neat thing about it was that I was easily able to get approximately 60 feet of height using
a dual set of guide wires. The radials were the guyed wires cut for the bottom of 20 meters with
insulator and slopeing down.

Butane irons are not big enough for soldering PL-259, even with the largest available tip. Soldering guns are utterly worthless! I use a 200-watt iron (WW-II surplus) that has a massive copper tip. The THERMAL MASS of the tip is more important than the wattage: With a soldering gun, for example, the tip is so small that even though it's high-powered, the PL-259 body soaks up the heat faster than it can be produced. A large mass of copper stays hot long enough to bring the PL-259 to solder-melting temperature, and does it quickly enough that the plastic insulation of the coax doesn't melt.

I haven't tried soldering PL-259s with a propane torch (Bernz-O-Matic, et al.) with copper-tipped soldering attachment, but that should work well. Old-fashioned "soldering coppers" (big bar of copper on steel/wood handle, to be heated over gas or gasoline stove) should also work well. You can buy them at flea markets.

I'm in the process of reviewing a questionnaire that is going to be used in a case-control study of brain cancers in rural areas. While the preliminary survey does contain questions regarding ham/cb/cellular/radar exposure, I would like to make sure that those areas are expanded a bit.

I would appreciate it if someone could point me towards some of the relevant literature.

Thanks.

>for *correct* plain text copy.

Copying plaintext by filling in holes from context obviously works for
some people with some words/phrases, especially the highly stylized
typical ham contact, however, try copying unfamiliar words that way,
or a word you *think* is mispelled. If you are copying *correctly*,
you'll copy the word as sent, not as you would spell it. But as I
noted, that's not really important if you're just trying to follow
the flow of a conversation rather than striving for perfect copy.

Max says he could copy 60 WPM for an entire watch without his error rate
increasing. Many of the circuits he was intercepting were apparently paper
tape driven. I don't think you can do that trying to consciously understand
words as sent. Your mind would wander for a moment even under the best of
conditions. Only an automatic reflex can keep up that kind of pace for hours
on end.

He says the worst thing about copying on a typewriter is when a right hand
character comes in while you're returning the carriage. He used a manual
typewriter in the Navy of course. He says that with a computer, he uses an
old VIC-20 now, wordwrap has increased his speed noticably over his old best
because he doesn't have to carry a character in his head while the carriage
returns. Though he said it took him several months to break himself of
swatting for the non-existant return lever every 60 characters.

It's remarkable to me that someone 70 years old can beat his own records set as a 20 year old. I wonder what he could have done if he'd had a computer then. Note I consider Max something of a prodigy, like a classical guitarist, or other musician. He has a "gift" as well as having spent, by now, many tens of thousands of hours of practicing. He said about 10% of the recruits in his class washed out at less than 20 WPM, about 60% were gone at 40 WPM, and only a very few ever got to 60 WPM despite having worked at it for 12 hours a day for the 6 weeks of their training. Obviously Max was in that elite group. I know I'd be in that initial 10%. My personal best has been 18 WPM after several hundred hours of practice. OTOH, I don't have the incentive of being stationed where I'm unlikely to be shot at if my speed were higher. And I know there are better ways of communicating without all that drill. That's got to have some effect. Still, I don't have the "gift" and will be at best only a hacker for the rest of my life no matter how much I practice. I can't play a guitar worth a damn either, even though I worked my fingers bloody practicing. At best I can mechanically reproduce the notes. I just don't have the "ear" for the music. Max has the "ear" for code. That has nothing much to do with his actual hearing ability, he's nearly deaf now. It has to do with a certain wiring of the brain centers I think.

Has any of the netters used an FTV-250 2 meter transverter with an FT-980 or similar solid state rig? I have never used a transverter and would like to try this if I could figure out how to hook it up to a rig it was never designed for and how to not transmit on 10 meters without having a switch to turn off the heaters like on the FT-101EE. The FT-101 connects into the transverter thru an accessory cable but the FT-980 dosen't have the same connector and I am not certain as to what exactly is being switched in the transceiver.

Well, Gary, you've verbalized nicely what I've sort-of-felt.
My question then is "Where to go from here?"
I cant write fast enough to go faster than say 25 WPM, I can't hear
words yet (a few only). I'd like to break the barrier and be able to
(as some buddys do) lean back in the chair and comfortably copy 35+
without writing or tying a thing.
Sounds like I should forget the typewriter, as it appears only good for
code groups, not QSOs.
Any advice for cracking the morse-as-characters to morse-as-words barrier?

We own a Radio shack 144/440 Mhz SWR/PWR meter and it seems to work great. We've tried it from .3watts to 60 watts (its full range) and from 1-4 on the swr range. I would reccomend it, but I haven't shopped around for one, we just picked it up to test an old radio we have. Only disadvantage on the 144 Mhz band is that it uses PL-259 connectors, so you might need BNC converters to use it with a handheld.

Does this law only apply to receivers? Plenty of transceivers can be
"easily modified" (whatever that means) to pick up cellular. Heck, some
of the HTs in there like the Icom W2A and 2SRA tune cellular without
modifications. I'd hate to see prices go up because manufacturers are
being made to re-design all their US equipment to comply with a stupid law
bought by cellular carriers. Build a (869-894MHz) radio, go to jail. Sheesh.

: In article <CKvGDJ.GFv@srgenprp.sr.hp.com> alanb@sr.hp.com (Alan Bloom) writes:
: >Consider a vertical dipole in free space. You could insert a horizontal
: >infinite ground plane at the feedpoint without changing the radiation
: >pattern. Now you have two verticals, one pointing up, one pointing down.
: >Each vertical radiates half the power of the original dipole.

: True because each has half the current that flows in the entire dipole.

No, the current is the same, but the power is halved. There are (at least)
two ways to see this: 1) Only 1/2 the voltage is applied to each 1/4-wave
element. Since power = voltage times current, the power is 1/2.
2) The element is only 1/2 as long. So the same current results in
only 1/2 as much power radiated.

Actually, 2) can be derived from 1). (Left as an exercise for the reader :=)

: >Note
: >that the upper vertical (over a groundplane) can generate the same
: >field strength as the dipole (in free space), but with only 1/2 the power.

: No, I disagree with the way you're saying this. The upper vertical in
: this thought experiment has half the current of the dipole and so generates
: half the field. The ground mirror is supplying a 3 db reflection gain that
: makes up for the lower field produced by the current in the upper vertical.

Nope, see above.

: >Now consider a dipole suspended a half wavelength or more over an infinite
: >ground plane. In some directions, it will have 6 dB gain over a dipole
: >in free space, which gives 3 dB gain over the vertical. In other directions,
: >the field will be zero. If you averaged the radiated power over all
: >directions (half sphere), you would find it sums to the same power as the
: >1/4-wave vertical (also averaged over all directions.)

: True, but gain in the main lobe (what we normally mean when we talk about
: gain) is 2X that of the vertical. And in the real world of lossy ground
: planes that make poor current mirrors, the horizontal dipole has a greater
: efficiency.

But to get the 6 dB gain, the dipole depends on ground reflections, just
as the vertical does. It gets very complex trying to compare ground losses
of ground-mounted verticals versus horizontal dipoles because of the many
variables involved (type of earth, number of radials, height above ground,
vertical radiation angle, etc. etc.). That's why assuming a perfect ground
gives a much more usable standard of comparison.

I heard a report on the (radio) network news last night to the effect that the national association of golf course managers funded a study to investigate the death rates of golf course managers. The study found that golf course managers have death rates from several kinds of cancer that are significantly higher than the national norm. The study tabulated cause of death from death certificates.

Sounds exactly like the famous Milham study of amateur radio operators which implied that exposure to RF radiation causes cancer. I wonder what the cause is for the golf course managers: too much fresh air?

Source record: 271523

SB SAREX @ AMSAT $STS-60.014
SAREX Update Feb. 9 at 03:30 UTC

Three of the five school groups slated for STS-60 have now made successful contacts. The most recent success was with the Mars Middle School, in Mars, Pennsylvania. They contacted the Discovery astronauts through a Telebridge in Texas on orbit number 85. The contact was initiated by Cosmonaut/Shuttle Mission Specialist Sergei Krikalev, U5MIR. Jan Davis then joined in on the school group discussion. A total of 9 students were able to ask questions.

Please note one correction from SAREX bulletin, SB008, regarding the SAREX contact between Sergei, U5MIR, and the school group at the House of Science and Technology for Youth in Moscow, Russia. The Cosmonaut who initiated the contact with Sergei was Musa Manarov, U2MIR. Sorry about the error.

School groups interested in communicating with the Shuttle astronauts are reminded to submit an application and proposal to the ARRL to be considered for a future contact. Final SAREX school group selections are decided approximately 6 months prior to the mission launch date. For more information, please write:

Educational Activities Division
ARRL
225 Main St
Newington, CT 06111

School groups are always welcome to listen into a school group contact when a telebridge contact occurs. We had several schools listening to the Mars, PA contact. For more details on how to listen in through the telebridge, please contact the ARRL at the above address or Frank Bauer, KA3HDO of AMSAT. His e-mail address is ka3hdo@amsat.org

The official SAREX element set for today will be GSFC-011. This element sent was generated by Ron Parise, WA4SIR of the Goddard Space Flight Center. Gil Carman, WA5NOM reports that the predictions using GSFC-011 differed from GSFC-009 by approximately 2 seconds.

STS-60

Report 1066 - PRIVATE RADIO BUREAU - PART 21 RECEIPTS AND DISPOSALS: Week of January 4 thru January 11

TEXTS

AT&T COMMUNICATIONS. Denied applications for review of six Common Carrier Bureau orders denying petitions to reject or to suspend and investigate various transmittals which introduced, or revised rates for, various AT&T services. (By MO&O [FCC 93-540] adopted December 9 by the Commission)

AT&T COMMUNICATIONS. Denied applications by MCI Telecommunications Corp. for review of ten 1991 and 1992 Common Carrier Bureau orders that allowed various AT&T tariff transmittals relating to AT&T's 800 service to become effective. (By MO&O [FCC 93-541] adopted December 9 by the Commission)

AMERICAN TELEPHONE AND TELEGRAPH COMPANY. Denied applications by U.S. Sprint Communications Company Limited Partnership and MCI Telecommunications Corp. for review of six November 1990 Common Carrier Bureau orders that allowed various AT&T transmittals which introduced AT&T's Virtual Telecommunications Network Service to become effective. (By MO&O [FCC 93-542] adopted December 9 by the Commission)

AT&T COMMUNICATIONS. Denied applications by MCI Telecommunications Corp. for review of 12 Common Carrier Bureau orders issued from February 25 to July 15, 1992, that allowed various AT&T contract tariffs to become effective. (By MO&O [FCC 93-537] adopted December 9 by the Commission)

LCI INTERNATIONAL vs. BELLSOUTH TELECOMMUNICATIONS, INC. Dismissed, with prejudice, complaint filed by LCI

International against BellSouth Telecommunications, Inc. seeking damages resulting from BellSouth's alleged violations of the Commission's rate of return prescription. (By Order [DA 94-36] adopted January 6 by the Chief, Formal Complaints and Investigations Branch, Enforcement Division, Common Carrier Bureau)

US WEST. Upheld six Common Carrier Bureau orders allowing the following transmittals to become effective: US West, Tariff F.C.C. No. 1, Transmittal Nos. 6 and 30; New York Telephone Company, Tariff F.C.C. No. 41; Transmittal No. 909; Communications Satellite Corp. (Comsat), Tariff F.C.C. No. 103, Transmittal No. 723; New York Telephone Co., Tariff F.C.C. No. 41, Transmittal Nos. 1035 and 1059; New England Telephone Co., Tariff F.C.C. No. 40, Transmittal Nos. 1048 and 1071; Bell Atlantic Telephone Cos., Tariff F.C.C. No. 1, Transmittal Nos. 359 and 375; Western Union Corporation, Tariff F.C.C. No. 286, 287, 288, and 289 Transmittal No. 8740. (By MO&O [FCC 93-539] adopted December 9 by the Commission)

Report No. DC-2560 ACTION IN DOCKET CASE January 26, 1994

COMMISSION REMANDS PROCEEDING CONCERNING AM STATION
WCBM, 680 KHZ, BALTIMORE, MD
(MM DOCKET NO. 90-125)

The FCC, on its own motion, has remanded the proceeding regarding the application of Bennett Gilbert Gaines for renewal of the license for AM station WCBM, 680 kHz, Baltimore, MD, and for assignment of the license from Gaines to WCBM Maryland, Inc. The Commission remanded the proceeding for further hearing with respect to the candor of WCMB Maryland's principal, Nicholas B. Mangione.

The Commission affirmed all other aspects of the Board's decision thereby denying an application for review filed by Mount Vernon Broadcasting.

Station WCBM was licensed to Magic 680, Inc. Gaines was appointed Interlocutory Receiver for the benefit of Magic 680's creditors and the Commission approved the assignment of license for WCBM to Gaines. Gaines agreed to transfer the license to WCBM Maryland and negotiated a consulting agreement with WCBM Maryland to operate the station on his behalf. Mount Vernon, a mutually exclusive applicant, argued that the Board erred in finding that it financially unqualified to be a licensee, and in failing to find that Gaines made an unauthorized transfer of control of the station to WCBM Maryland, and that Mangione gave false testimony.

The Commission remanded the proceeding to the presiding judge for expedited hearing and preparation of a Supplemental Initial Decision to determine whether Mangione made material misrepresentations with respect to his involvement in the management of WCBM and the proposed management of WCBM Maryland; and to determine whether WCBM Maryland possesses the basic qualifications to be a licensee.

Action by the Commission January 24, 1994, by Memorandum Opinion and Order (FCC 94-14). Chairman Hundt, Commissioners Quello, Barrett, and Duggan.

FCC RELEASES POLICY STATEMENT ON EEO
BROADCAST RULES ENFORCEMENT AND
ANNOUNCES EEO SANCTIONS AGAINST CABLE
AND BROADCAST OUTLETS
The FCC announced today several actions which
reaffirm its commitment to effective enforcement of its
broadcast Equal Employment Opportunity (EEO) rules. The
Commission released a Policy Statement establishing
guidelines for assessing forfeitures for violations of the
Commission's broadcast EEO rules and also announced a
number of EEO enforcement actions. The Policy Statement
re-establishes the base forfeiture amount for violations of the
broadcast EEO rules at $12,500. It also provides guidance
on which situations may lead to such a forfeiture, and
describes circumstances in which the base forfeiture amount
may be adjusted upward or downward.
Action by the Commission January 31 by Policy Statement

TELEPHONE AND DATA SYSTEMS. Acted on two
applications for review of the Common Carrier Bureau's
decision in Telephone and Data Systems, Inc. These
applications for review were filed by a group of applicants
which comprised a partial settlement group in the Wisconsin
8 (Vernon) RSA, and by Telephone and Data Systems, Inc.
(TDS). The Commission granted in part the application for
review filed by TDS and denied the other. It additionally
designated for hearing character issues concerning a TDS
subsidiary's conduct before the Commission and whether
this calls in question TDS's qualifications as a Commission
licensee. (CC Docket 94-11, by MO&O and HDO [FCC

94-29] adopted February 1 by the Commission).

Report No. DC-2562 ACTION IN DOCKET CASE February 1, 1994

RENEWAL APPLICATIONS OF KFUO/KFUO-FM, CLAYTON, MO,
DESIGNATED FOR HEARING
(MM DOCKET 94-10)

The Commission has designated for hearing the applications of The Lutheran Church/Missouri Synod for renewal of the licenses for its stations KFUO/KFUO-FM, Clayton, MO, to determine whether the licensee violated the Commission's EEO rule and submitted untrue statements to the Commission.

The Commission said the stations' renewal applications, as well as the licensee's responses to FCC letters of inquiry established that substantial and material questions of fact existed regarding the licensee's compliance with the Commission's EEO and candor rules.

The Commission said the record revealed that the licensee did not actively recruit for the majority of its positions. It gave several reasons for its failure -- its vacancies required religious training and classical music expertise that few area minorities possessed, and that it had a reciprocal arrangement with Concordia Seminary, on which its studios are located, whereby the stations did not pay rent in exchange for providing broadcast training or other employment to seminary students or their spouses.

The Commission said it appeared that these policies raised substantial and material questions of fact as to whether the licensee's employment practices are discriminatory in violation of our EEO rule.

Further, review of the renewal applications and subsequent submissions raised questions as to lack of candor due to discrepancies in numbers reported.

The Commission noted that should the hearing result in a finding that denial of license renewal is not appropriate, a forfeiture of up to $250,000 may be assessed against the licensee for the violations.

(over)

Action by the Commission January 31, 1994, by Hearing Designation Order (FCC 94-23). Chairman Hundt, Commissioners Barrett and Duggan with Commissioner Quello concurring in the result and issuing a statement.

FCC RELEASES POLICY STATEMENT ON EEO BROADCAST RULES ENFORCEMENT AND ANNOUNCES EEO SANCTIONS AGAINST CABLE AND BROADCAST OUTLETS

The FCC announced today several actions which reaffirm its commitment to effective enforcement of its broadcast Equal Employment Opportunity (EEO) rules. The Commission released a Policy Statement establishing guidelines for assessing forfeitures for violations of the Commission's broadcast EEO rules and also announced a number of EEO enforcement actions. The Policy Statement re-establishes the base forfeiture amount for violations of the broadcast EEO rules at $12,500. It also provides guidance on which situations may lead to such a forfeiture, and describes circumstances in which the base forfeiture amount may be adjusted upward or downward.

"The Policy Statement we release today is the result of a strong collaborative effort by Commissioners Ervin Duggan, Andrew Barrett, Jim Quello and myself," Chairman Reed Hundt said today. "This Policy Statement will provide the Commission, licensees and the public with comprehensive guidance on the application of broadcast EEO rules. It also reaffirms the Commission's commitment to tough but fair enforcement of these rules. Combatting discrimination and other harmful barriers to employment enhances access to broadcast employment. This in turn promotes the development of a diverse workforce which contributes to the diversity of broadcast programming and further development of the broader communications infrastructure."

The Policy Statement released today outlines the guidelines by which the Commission will assess and sanction violations of its broadcast EEO rules. The Commission stressed that these guidelines are non-binding and its staff will continue to evaluate each case on its particular merits. However, the overall guidelines will give licensees and the public a better understanding of how EEO rules will be enforced.

The Policy Statement sets a base forfeiture amount of $12,500 for violations of EEO broadcast rules and provides guidance on situations that would increase or decrease this fine. In addition to forfeitures, the Commission can issue short term license renewals. The Policy Statement also provides guidance on these situations.

(over)

The Commission also announced today a number of EEO actions that concern employment access to mass media and cable facilities

for women and minorities, including Blacks, Hispanics and Asians. First, the Commission is imposing a $121,500 forfeiture on and denying cable certification to Adelphia Communications Corporation for its failure to comply with the Commission's Cable EEO requirements at the company's Unit 305 in Palm Beach County, Florida. The Commission found that both women and minorities were adversely affected by Adelphia's lack of compliance.

Second, the Commission is designating for hearing the renewal applications for stations KFUO-AM and KFUO-FM, Clayton, MO. This action is being taken because of, among other things, substantial and material questions of fact that exist as to whether the licensee's employment practices are discriminatory in violation of our EEO rules.

Third, the Commission is assessing sanctions of short term renewals, forfeitures ranging from $18,750 to $37,500 and reporting conditions on the following stations for violations of our EEO rules: KEGL-FM, Fort Worth, Texas; KMND-AM and FM, Midland, Texas; KTEM-AM and KPLE-FM, Temple, Texas; KSAM-AM and FM, Huntsville, Texas; KYKX-FM, Longview, Texas; KGNC-AM and FM, Amarillo, Texas; KEBE-AM and KOOI-FM, Jacksonville, Texas; KGVL-AM and KIKT-FM, Greenville, Texas; KEZX-AM and FM, Seattle, Washington; KKCB-AM and KSLY-FM, San Luis Obispo, California; and KTMS-AM and KHTY-FM, Santa Barbara, California. Forfeiture and reporting conditions are imposed on stations KVI-AM and KPLZ-FM, Seattle, Washington, and reporting conditions are imposed on stations KSPA-AM and KOWF-FM, Escondido, CA.

Action by the Commission January 31, 1994, by Policy Statement (FCC 94-27). Chairman Hundt, Commissioners Quello, Barrett and Duggan.

Report MM-800 MASS MEDIA ACTION February 1, 1994

KSPA(AM)/KOWF(FM), ESCONDIDO, CA GRANTED LICENSE RENEWALS SUBJECT TO REPORTING CONDITIONS

The Commission has granted the applications of North County Broadcasting Corporation for renewal of its licenses for Stations KSPA(AM)/KOWF(FM), Escondido, California, subject to reporting conditions. The Commission denied a petition filed by the National Association for the Advancement of Colored People and the National Black Media Coalition.

The Commission said that based on its review of the record, it found that grant of the renewals would be in the public interest.

It said that the licensee of KSPA(AM)/KOWF(FM) made efforts to recruit minorities and attracted and hired minority applicants during the license term. However, the licensee failed to self-assess its program adequately. Despite having few minorities in the applicant pools during its tenure as licensee, the licensee did not significantly expand its list of recruitment sources prior to the renewal year.

Action by the Commission January 31, 1994, by Memorandum Opinion and Order (FCC 94-19). Chairman Hundt, Commissioners Quello, Barrett and Duggan.

Report No. MM-799 MASS MEDIA ACTION February 1, 1994

KKCB/KSLY-FM, SAN LUIS OBISPO, KTMS/KHTY-FM, SANTA BARBARA, GRANTED SHORT-TERM RENEWALS SUBJECT TO FORFEITURES AND REPORTING CONDITIONS

Following review of their respective EEO (Equal Employment Opportunity) programs, the Commission has granted, subject to sanctions, the license renewal applications for the following licensees: San Luis Obispo Limited Partnership for stations KKCB/KSLY-FM and Pinnacle Communications, Inc. for stations KTMS/KHTY-FM. The National Association for the Advancement of Colored People (NAACP) and the National Black Media Coalition (NBMC) petitioned the applications of both licensees.

The Commission has renewed the licenses for KKCB/KSLY(FM) for a short term subject to reporting conditions and a Notice of Apparent Liability (NAL) for $25,000 due to deficient recruitment efforts. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 72 full-time jobs. Further EEO conduct indicating particular types of deficiencies also contributed to the imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its vacancies, and inadequate efforts given the substantial number of hiring opportunities. However, in evaluating the overall sanction, the Commission did give the licensee credit for recruitment efforts which resulted in minority hires.

The Commission has renewed the licenses for KTMS/KHTY-FM for a short term subject to reporting conditions and a NAL for $31,250 due to deficient recruitment efforts. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 56 full-time positions. Further EEO conduct indicating particular types of deficiencies also contributed to the

imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its positions, inadequate efforts given the large number of hiring vacancies, and the large minority labor force.

Report No. MM-798 MASS MEDIA ACTION February 1, 1994

ADELPHIA COMMUNICATIONS, PALM BEACH COUNTY, FL,
FOUND IN VIOLATION OF THE EEO RULE;
NOTIFIED OF FORFEITURE IN THE AMOUNT OF $121,500

The Commission has denied cable certification for Adelphia Communications Corporation for Unit 305, Palm Beach County, FL and notified Adelphia of an apparent liability for forfeiture in the amount of $121,500 for violating the Commission's Equal Employment Opportunity rules.

An EEO audit of Adelphia's Unit 305 revealed that Adelphia had failed to comply with the EEO rule provisions for the years covered by the 1991-1993 Cable Annual Employment Reports. The Commission found that: the unit had few minorities in the applicant pool for upper-level positions, especially in the area of sales; the unit hired few minorities for upper-level positions; almost all of the African Americans employed in upper-level positions were among the lowest paid upper-level employees at the unit; the unit interviewed and hired no minorities for certain groups of jobs and minorities were absent from various departments and facilities; and, for a significant number of lower-level positions, the unit failed to hire minorities despite their overwhelming majority in the applicant pool. Also, the unit had no program to ensure that promotions were made in a non-discriminatory manner thereby adversely affecting both women and minorities; did not encourage minority and female entrepreneurs to conduct business with all parts of its operation; and failed to keep complete and accurate records of its EEO efforts.

Consequently, the Commission concluded that Adelphia had engaged in employment practices that had an adverse effect on minorities, and that a forfeiture of $121,500 was appropriate.

Action by the Commission January 31, 1994, by Memorandum Opinion and Order and Notice of Apparent Liability (FCC 94-22). Chairman Hundt, Commissioners Barrett and Duggan with Commissioner Quello concurring in the result and Commissioners Quello, Duggan and Barrett issuing separate statements.

Report No. MM-802 MASS MEDIA ACTION February 1, 1994

FOUR SEATTLE, WASHINGTON RADIO STATIONS GRANTED LICENSE RENEWALS, SUBJECT TO FORFEITURES AND REPORTING CONDITIONS

Following review of their respective EEO (Equal Employment Opportunity) programs, the Commission has granted, subject to sanctions, the license renewal applications for the following licensees: Roy H. Park Broadcasting of Washington, Inc., for stations KEZX(AM)/KEZX-FM; KVI, Inc., for station KVI(AM); and KPLZ, Inc., for station KPLZ(FM). The National Association for the Advancement of Colored People (NAACP) petitioned the applications of the licensees.

The Commission has renewed the licenses of KEZX(AM)/KEZX-FM for a short term subject to reporting conditions and a Notice of Apparent Liability (NAL) for $18,750. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 53 full-time jobs. Further EEO conduct indicating particular types of deficiencies also contributed to the imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its positions, and inadequate efforts given the large number of hiring vacancies. However, in evaluating the overall sanction, the Commission did give the licensee credit for recruitment efforts which resulted in minority hires.

The Commission has renewed the licenses of KVI(AM) and KPLZ(FM) subject to reporting conditions and a Notice of Apparent Liability (NAL) for $18,750. The sanctions are based on the licensees' failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of their 35 full-time jobs. Further EEO conduct indicating a particular type of deficiency also contributed to the imposed sanctions. In this regard, the specific deficiency was the licensees' failure to recruit for at least a third of their positions.

Report MM-801 MASS MEDIA ACTION February 1, 1994

EIGHT TEXAS RADIO STATIONS GRANTED SHORT-TERM LICENSE RENEWALS, SUBJECT TO FORFEITURES AND REPORTING CONDITIONS

The Commission has granted short term license renewals for eight Texas radio stations, along with additional sanctions, based on violations of FCC EEO broadcast rules. The short term licenses were granted to: Eagle Radio, Inc., for station KEGL(FM); Dennis Elam, Trustee for Bakcor Broadcasting, Inc., Debtor, for station KMND/KNFM(FM); KTEM Radio, Inc., for stations KTEM/KPLE(FM); Walker County Communications, Inc., for stations KSAM/KSAM-FM; and Radio Sungroup of Texas, Inc., for station KYKX(FM). The National Association for the Advancement of Colored People (NAACP) and the National Black Media Coalition (NBMC) each petitioned the applications of some of the licensees.

The Commission has renewed the license for KEGL(FM) for a short term subject to reporting conditions and a Notice of Apparent Liability (NAL) for $18,750. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 47 full-time jobs. Further EEO conduct indicating particular types of deficiencies also contributed to the imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its positions, and inadequate efforts given the large number of hiring vacancies. However, in evaluating the overall sanction, the Commission did give the licensee credit for recruitment efforts which resulted in minority hires.

The Commission has renewed the licenses for KMND/KNFM(FM) for a short term subject to reporting conditions and a NAL for $25,000. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 29 full-time jobs. Further EEO conduct indicating particular types of deficiencies also contributed to the imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its positions, inadequate efforts given the large number of hiring vacancies, and the large minority labor force. However, in evaluating the overall sanction, the Commission did give the licensee credit for recruitment efforts

which resulted in minority hires.

(over)

- 2 -

The Commission has renewed the licenses for KTEM/KPLE(FM) for a short term subject to reporting conditions and a NAL for $25,000. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 35 full-time positions. Further EEO conduct indicating particular types of deficiencies also contributed to the imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its positions, inadequate efforts given the large number of hiring vacancies, and the large minority labor force. However, in evaluating the overall sanction, the Commission did give the licensee credit for recruitment efforts which resulted in minority hires.

The Commission has renewed the licenses for KSAM/KSAM(FM) for a short term subject to reporting conditions and a NAL for $31,250. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 38 full-time vacancies. Further EEO conduct indicating particular types of deficiencies also contributed to the imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its hires, inadequate efforts given the large number of hiring vacancies, and the large minority labor force.

The Commission has renewed the licenses for KYKX(FM) for a short term subject to reporting conditions and a NAL for $31,250. The sanctions are based on the licensee's failure to engage in recruiting efforts so as to attract an adequate pool of minority applicants for a substantial number of its 34 full-time hires. Further EEO conduct indicating particular types of deficiencies also contributed to the imposed sanctions. In this regard, specific deficiencies include the licensee's failure to recruit for at least a third of its hires, inadequate efforts given the large number of hiring vacancies, and the large minority labor force.

Action by the Commission January 31, 1994, by Memorandum Opinion and Order and Notice of Apparent Liability (FCC 94-17). Chairman Hundt, Commissioners Quello, Barrett and Duggan.

1227. Amateur radio astronauts

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-09 06:40:19 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseCKy2J7.GL4@netcom.com>
Source record: 271379
Cross-posted to: sci.space.shuttle,rec.radio.amateur.misc

copied from amateur radio packet radio:
Subject: Ham Astronaut/Cosmonaut Listing 2/94
From: KG5U@KA5KTH.#SETX.TX.USA.NA

==========
The following is compilation of data from a variety of
sources (ARRL, AMSAT, Shuttle Amateur Radio Experiment
Working Group, and Motorola, Goddard Space Flight Center and
Johnson Space Center Amateur Radio Clubs.
==========

U.S. Space Shuttle Astronaut/Hams:

Amateur Radio operations onboard U.S. Space Shuttles began
November 1983, wih Owenarrtt's STS-9 flight. Since
then, the SAREX (Shuttle Amateur Radio Experiment) has
matured and developed to include formal, scheduled contacts
with school groups, amateur television (ATV) uplinks, family
contacts, robot packet and slow-scan television (SSTV)
operations, and general voice QSO's.
The number of hams in the astronaut corps has also
increased dramatically over time. As SAREX activities
develop, and astronaut's exposure to it has increased,
interest is piqued and licensing generally follows. The
concept of communicating directly with hams (read: non-NASA
civilians) while flying in space is a tantalizing concept to
many of the astronauts; certainly, the idea of bringing the
adventure, thrill, and technology of spaceflight to school
children on a personal basis through SAREX plays a large
part in the astronaut's incentive to become licensed.

I know this might sound kinda strange, but I just got an envelope from the W5 buro, and guess what, a ZA1A card from July 7, 1992. Hey, it took 2 years to get here, but it made it! Guess it shows that patience really works if you let it.

1230. Opinions wanted on mobile dual-banders

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-09 09:47:19 UTC
From: dev@armory.com
Message-ID: <CKyB6w.4Fp@armory.com>
Source record: 271381
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

i posted this a little while ago just to the equipmet group, but
seeing as i got little response, i'm widening my audience a bit. :-)

anyways, i'm looking to get a mobile dual-bander for my car. and of
course i'm interested in finding out what other people have and
why the like or dis-like it. i'm interested in what sort of
features they have, what features they do or don't need on it,
what's really good to have (expanded recieve? backlit DTMF mic?).
tell me your experiences, etc.

i've noticed that most of the units only do tx from 440 to 450
in the 70cm band. that seems a little weird to me. only the
Yaseu seems to do 430 to 450. these sorts of oddities is what
is confusing me as to what to buy.

any help on this would be really appreciated.

BARTG * GB2ATG * NEWS * BARTG * NEWS * GB2ATG * BARTG
This is the - British Amateur Radio Teledata Group - News Broadcast Service for all Amateurs and Short Wave Listeners interested in RTTY Amtor, Pactor and Packet Radio.

This news is broadcast during the first full week commencing Monday each month, to the following schedule..

Evening transmissions at 1930 GMT. on 3.584 MHz. Mark. +/- for QRM.
RTTY on Monday-AFSK, Wednesday-AFSK, and Friday-FSK.
Pactor-FEC on Tuesday.
Amtor-FEC on Thursday and Saturday.

Morning transmission at 1000 GMT. on 7.041 MHz. Mark. +/- for QRM.
RTTY on Sunday-AFSK.

An edited version of this bulletin is available on the Packet network as a BARTG @ GBR. file thanks to: Andy (G3ZYP) @ GB7MXM.#36.GBR.EU.

It is also posted on the "INTERNET" system via the INFO-HAMS list on UCSD.EDU. thanks to Iain (G6ARO) who is available on the "JANET" network as Iain@HUMBER.AC.UK

News for February 1994. Bulletin No. 014. (all times are GMT).

1B1AD via DK7ZZ.
TZ6FIC via F6KEQ.

Contests.

The BARTG HF RTTY contest starts 0200 Saturday March 19 until 0200 Monday March 21 on all 5 HF bands 80 through 10 meters. Single operator and SWL stations permitted a maximum 30 hours operating. Rest periods in blocks not less than 3 hours.
Multi-operator stations may work the full 48 hour contest period.

Categories:
1. Single operator all band.
2. Single operator single band.
3. Multi-operator all band.
4. Multi-operator Multi-transmitter.
5. Short Wave Listener.

Categories 1, 2, and 3 may not transmit on 2 or more bands at the same time. No station may enter more than one category.

Exchange message to consist of:
RST plus a 3 figure group serial number starting with 001

QSO points:
Each completed QSO scores one (1) point. Stations may be contacted again on other bands for QSO credit. All duplicate contacts on the same band must be clearly marked in the log.

Multipliers:
All DXCC countries (including W, VE and VK) and all W, VE and VK call areas count as multipliers on each band.
Note:: Any country or W/K, VE/VO or VK area may be counted again if worked on a different band but continents are counted once only.

Scoring:
QSO points times multipliers times continents (max 6).

Logs:
Use separate log sheets for each band. Logs must show band, date, time GMT, callsign, message sent and received, countries and points claimed.

SWL logs must contain date and time GMT of logging, callsign of station heard, report sent by that station and callsign of station being worked.

Summary sheet.
To show full scoring, times of operation and address for correspondence. In the case of multi-operator stations, the names and callsigns of all operators involved with the station operation during the contest.
All logs must be received by May 31 1994 to qualify. Sample log and summary sheets are available from the contest manager. UK entrants send large (A4) S.A.E. outside UK please send 6 IRC'S to cover postage. Computer generated logs containing all specified information are welcomed.

Please send your contest or check logs to:
Contest Manager
John Barber G4SKA
PO. Box 8.
Tiverton, Devon EX16 5YU, England.

Certificates will be awarded to the top 3 stations in each category, the top 5 single operators in each continent and the top single operator in each W/K, VE/VO and VK area.

Contestants contacting 25 or more DXCC countries on two-way RTTY during the contest may claim the Quarter Century Award (QCA) issued by B.A.R.T.G. for which a charge of 6 US. dollars or 30 IRC's is made. Existing QCA holders may add new countries to their existing records.
A separate sheet showing bands, callsign and countries claimed must be included with the contest log.

Comments on the contest would be much appreciated.

Notes of interest.
1B1AD is Northern Cyprus which does not carry DXCC status at present.
US5WV is a special call for CIS Europe.
LI30OWG is a special call being used from Gjovik for the Olympic winter games in Norway. There is also LI20OWG and LI40OWG.

Changes affecting the Russian CIS prefix allocation from January 1 1994 as follows:

Republic. Old prefix. New prefix.

European Russia (UA1,3,4,6) RAA-RIZ, UAA-UIZ.
Ukraine (UB,UT,UY) EMA-EOZ, URZ-UZZ.
Byelorussia. (UC) EUA-EWZ.
Azerbaijan. (UD) 4JA-4JZ, 4KA-4KZ.
Georgia. (UF) 4LA-4LZ.
Armenia. (UG) EKA-EKZ.
Turkmenistan. (UH) EZA-EZZ.
Uzbekistan. (UI) UJA-UMZ.
Tadzhikistan. (UJ) EYA-EYZ.
Kazakhstan. (UL) UNA-UQZ.
Kirghizia. (UM) EXA-EXZ.

Moldavia. (UO) ERA-ERZ.

For Russian stations;

UW => RU - UV => RX - UZ => RK

Previous changes to other USSR prefixes include:

Lithuania. (UP,RP) LY. SINCE 1990
Latvia. (UQ,RQ) YL. SINCE 1990
Estonia. (UR,RR) ES. SINCE 1990

To complete the list the following prefixes remain in force, (as far as I am aware):

Franz Josef Land. 4K2, EK, UA1O
Kaliningrad. UA2F,RA2F
Asiatic Russia. UA7-UA0, UZ7-UZ0.

During the ARRL Roundup contest a number of strange new CIS prefixes were being used. There is no doubt this will make the job of the contest manager more difficult until we can be sure which Republic the prefix in use represents. Some stations were informing contacts during the exchange. For instance RU3AT (ex UW3AT) avoided and doubt but others are going to be difficult to pin down. I can only suggest you add a note with your submitted log indicating areas of doubt. This should help the committee to locate and correct any misunderstandings.

Thanks this month to:.
G3ZYP, GW3LYF, DXNS.

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

Copy of the news bulletin as distributed by G0ARF 940201.

I'd venture a guess that the death rate is probably due to the exposure to chemicals and insecticides used in grounds keeping. This is also the theoretical reason why Long Island, NY has the highest incident of breast and testiclar cancer. Except in L.I.'s case, it is believed to be residue of chemicals, (DDT the most likely culpret), used decades ago that has seeped into the aquafer. Most L.I. residents get their drinking water from wells.

There is also the possability that some golf courses may be near high tension lines or broadcast towers.

>>route?

There were major problems with getting this card, but they eventually
trickled out. The only routes that worked were to US addresses, then
hand carried into Vensuela. That was how I got my cards.

>>Does anybody know if F6FNU QSLs via the bureau?

Ha! Try $3 to $5, per card, plus SAE.

Source record: 271385
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

My original posting of this question contained header errors which may have affected people's efforts to respond...So one more time...

I'm trying to interface a Yaesu FT-5100 to a MFJ-1270B TNC via the 5100's DATA IN/OUT jack. I constructed a connector based on the instructions in the 5100 manual. The problem is that the transmit audio level out of the TNC is way too low. Adjusting trimpot R76 during the 1270B recalibration procedure does not help. Any suggestions from those who have this connection working are appreciated.

Thanks...

I can think of two things: Skin cancer (they are out in the sun a lot),
and cancer caused by excessive exposure
to pesticides used on the greens and fairways.

I wonder when the groundskeeper death rate study will be released.

I think that's true. At the higher speeds, there's sort of a direct
connection from the ear to the fingers, and definitely the neural
connections are different when the fingers move in a pattern for writing
letters and when they go up and down in the proper places on the keyboard.

I mentioned earlier my inability to copy on paper beyond about 30
wpm...I've tried typewriter copy, and don't do quite that well...maybe 25
wpm. Part of it is that I still have to think a bit about typing. As with
learning the code in the first place, practice helps.

: copied and will actually need to read it off the typewriter/PC display.

I completely agree on both counts. My present code speed is 55 wpm,
and I'd be REAL hard pressed to do it without a keyboard.

Although, I did just that at an ARRL convention out at Glacier
National Park a year and a half ago -- with a pencil.

There we were -- in a TENT, no less -- with all contenders having
long ago given up (at around the 40-45 wpm mark), except for myself
and one feller from Western Canada. We gave each other the evil
eye across the table, and asked each other if we were gonna try
60 wpm, to which we agreed, dull pencils and all.

We walked out of the tent not knowing who had "won" the little
contest, until I stuck my ear up against the tent walls (neat trick)
and overheard the examiners saying something along the lines of
"geez, I can't read EITHER guys scrawling, can YOU?" "Nope". "well,
which guy won?" "Whelp, how about THIS feller; I see what looks
like a couple correct characters there that I can actually read."

I still didn't know who had won.

Got a check in the mail one day a few weeks later, claiming that
I had won both that and the QLF (sending with your left foot)
contest. I returned the check, suggesting that they might
consider using the money to help a newcomer get rolling nicely.

>element. Since power = voltage times current, the power is 1/2.
>2) The element is only 1/2 as long. So the same current results in
>only 1/2 as much power radiated.

Ok, apparently I'm not analyzing this case properly. Here's the way
I see it.

Dipole split by infinite ground plane.

```
|
|
-------/\/\/\/\---o | o---/\/\/\/\-------
E1 | E2
|
|
```

If we apply drive to E1-E2, equal currents are driven into each element's
impedance. So the halves of the dipole have equal currents flowing in them,
but 180 degrees out of phase. With the infinite ground plane isolating the
halves, one half has half the total current flow.

Howdy:

In a recent spate of messages, we have been told of the capabilities
of the hamblaster. It sounds rudimentary so far but I am sure that
over time the capabilities (new software development) will proceed
and its capabilities will be enhanced and it will make a very
interesting tool for amateur radio communications, experimentation,
and learning DSP. There will be alternatives as you will now be told.

In other messages, John Alberts has told us of the lack of capabilities
of the Sound Blaster 16 with ASP. He is WRONG. I received my Sound
Blaster developers kit via UPS yesterday at last. It is easy to see
how John could have made the mistake he made. The manuals received
in the kit describe two distinct pieces of processing hardware.
One is called the DSP and the other is the ASP. The DSP has all
the limitations mentioned by John in his statements concerning
the capabilities of the Sound Blaster card (or lack thereof). It is
a proprietary gate array surrounding masks from other chip developers
to do stuff like DMA blocks of samples in and out, to convert PCM
to u-LAW, 2 or 4 bit ADPCM, CVSD, etc. It directs the flow of
MIDI commands, etc. It is a pretty neat thing in and of itself
but it is NOT what we want. We want a full blown DSP chip, with
a modified Harvard architecture and at least 16 by 16 bit -> 32 multiply,
accumulate, read new coefficient and data in one instruction time.
THE ASP is a real DSP chip and has all this. It is 512 words of off
chip program memory, 512 words of off chip data ram, 192 words of X RAM
on chip,128 words of Y ram on chip. X ram is program and sample
data, Y RAM would be used for filter coefficients. THIS IS A FULL
BLOWN DSP CHIP. It does NOT have the limitations John has told us
the hamblaster overcomes. Indeed, on the A/D, D/A front, it is quite
clear that the under $300 SB16-ASP is quite a bit MORE CAPABLE than
hamblaster. It has two channels (16 bits each), D/A, and A/D. The
sample rate is completely controllable by uploading a divisor to
the control register. The lowest available rate is 5 Khz and the
highest is 44.1 Khz. The processor runs at 12 MIPS so filters would
execute at around 25 MIPS. This is because it has the typical
DSP feature of multiply two numbers, read the next two, and accumulate
the last result while shifting the pointers in two instruction times.
That is plenty fast. I will be able to do dual channel modems for this
card. Since the thing does not also have a UART, or SIO, we will have
to the HDLC and UART functions on the chip when required. Other DSP
developers have done this all on chip (Finland DSP development group
on the Motorola DSP56001). We will be able to do a lot.

John should be more careful when he makes flat statements about commercially available products. If he were a `real competitor' of Creative Labs, he could get into a bit of a hassle. I am following the philosophy of my dear friend, Phil Karn, in attributing to ignorance when possible, that which could be attributed to malice (in this case, competition). I told John in a reply to his mail that I doubted the accuracy of his statements on the Sound Blaster16 with ASP. I was correct. The Sound Blaster 16 with ASP is available from many places for under $300. The developers kit is $99, available only from Creative Labs. In addition to this, you must have a dsp assembler. The developer's kit provides COMPLETE tools for uploading and downloading programs to the ASP chip.

I will be writing programs for the ASP and giving them away on your favorite ftp sites and through the ARRL download request service. These programs will be the basis of articles for QEX describing the algorithms and the operation of the sound blaster card in amateur radio applications. Phil Karn has devised a new link layer for packet, with FEC, etc. and I will be providing modems that use the ASP. I believe I can provide what the latest hamblaster announcements state and more in short order after I get the assembler for the ASP. I will do this as quickly as possible. I am a bit miffed that I stopped developing the Windows and DOS front ends and display stuff for the SB16 ASP after John's note because I thought the SB16 was too limited. Now it is full steam ahead.

1242. Bosnia Health and Welfare traffic question

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-09 14:17:51 UTC
From: sbaker@umassmed.UMMED.EDU
Message-ID: <9402091417.AA18180@umassmed.UMMED.EDU>
Source record: 271390

I was contacted by a friend who has helped a group of Bosnian refugees into the US. Now they would like to try to find out about the health and welfare of friends and relatives back in Bosnia, including one who is a ham (don't yet have his call). Can anyone suggest an approach that might work?

My on HF station is limping along, my G5RV has come partially down due to an ice storm, so what I plan to do is get on our 2m info net tonight and see if I can find some one with a decent antenna and linear who would be willing to try to work Bosnia, and possibly someone who can check the DX cluster to find someone on the air, but this sounds a bit _ad_hoc_ and I suspect there is probably some route better established for this kind of traffic. I also don't know the 3rd party status of Bosnia.

Any help/suggestions much appreciated.

Wow, only two years? Mine took 10 months by direct mail to Italy! Even
my card from Pitcairn Is. (only three ships a year?) took just 4 months.

Of course, I'm still getting cards from the USSR via the bureau. In
December, I got a card through the bureau from UL7LWF. I worked this
QSO in 1988! Yes, FIVE years!

F6FNU almosty certainly does NOT go through the bureau. From what I've heard, he makes quite a business of running QSL cards. Although it's hearsay, I have been told it's quite hard to get a card from him unless there's a SIZABLE amount of return postage inside (payment for his trouble?).

N7RO, if I remember correctly, does 7 cards for a dollar, or for 2 irc's.

A similar method works well (at least for me). I use a regular bow and
arrow for doing the same thing. However, one wants to use a fiberglass
fishing arrow for the weight. Depending on the style of the arrow, either
cut of the barb or tape it against the arrow (may need to pull it back over
a limb to reshoot). Tie strong fish line to the arrow (low weight and
drag), shoot over the appropriate limb, tie the fish line to whatever is
going to hold up the antenna and pull it back across the limb. Don't
try to actually pull up the antenna using the fish line. Another advantage
of the fish arrow is it has a hole through which you tie the fish line.

Even with the weight of the arrow, sometimes it is difficult to get it
lowered to the ground. The advantage of using a bow or crossbow is that
how close you stand to the limb being shot over regulates the distance
from the other side where the arrow will land.

For our club's field day, we have used both my bow and arrow and another
member's fishing pole. Both work equally well in some situations, and

in others, one might work a little better than the other.

I guess I shouldn't tell stories on myself, but... For three glorious
years in the early 70's I was KH6IJX on the Big Island. It was great
being semi-DX and even causing some mini-pilups with Asian stations
calling me. Anyway, about two months ago I came across some misc boxes
of ham-related stuff that had been packed away when I left Hawaii and
buried since then. Among the other items were about a dozen QSL's
that I had filled out but not mailed evidently because I couldn't find
the address or something. Well, I found valid current address for a
number of these and sent them off 20 years late!! I've been getting
some interesting responses.....

73's - John, W3GOI

p.s. If you work me now and want a QSL, I guarantee that you'll get
a more timely reply.

1247. Operating in Canada?

[Article crossposted from rec.radio.amateur.policy]
[Author was David R Tucker]
[Posted on Tue, 8 Feb 1994 01:29:30 GMT]

Today I called the FCC in Washington and spoke to Tom FitzGibbon, who works in the Amateur Radio section of the Private Radio Bureau. He told me that the FCC exercises no jurisdiction over radio stations in Canada, that a US-licensed amateur operating there under the reciprocal agreement was free to use any frequency or mode authorized by the Government of Canada, and that the same was true for all other foreign countries as well.

OK, now while you're busy making these nifty tests, how about taking a 50 foot piece of RG-213 and putting a pair of UHF and then N connectors on it. Test it again, and tell me just how much difference it really makes. Run the tests at 146 and 450 MHz.

When you get finished with this, come back and tell us just how much RF is lost by that "terrible" UHF connector. And just how bad it makes a known 50 ohm load look at the other end of the cable.

Best luck has been had with a Weller 140 Watt soldering gun with the tips removed. Grease the braid with rosin flux, pre-tin lightly and re-flux Install into connector, and straddle the hole in the side with the weller tips. (This is resistance soldering technique) Feed solder into the hole. Rotate connector and do the other 3 holes.

I usually solder the center conductor first to hold things stable. Take it easy with pretinning the braid, if you make it too thick, it will not fit in the connector shell. Also, for the connector to be "properly assembled" the cable jacket is supposed to "screw" into the shell body.

Wonder of wonders, when the braid is properly soldered to the connector, and the jacket is threaded into the shell, the connector is weather proof. Or at least it is if you use Amphenol connectors instead of whatever cheap piece of crap you can buy for 25 cents at the swapmeet.

My guess is no. When I sent a card to N7RO for a station that has
F6FNU as a mgr, N7RO sent it back to me with a note saying that F6FNU
requires direct qsl. I bet N7RO knows about this. :)

BTW, I have a 100% QSL return rate from F6FNU. I only include cards of
one station in an envelope, include a euro size SAE and two crisp dollar
bills.

BTW, I read in the CQ Almanac that F6FNU is a manager for over 450 stations.
The largest number of all managers.

>Does anybody know the current rate (number of cards per dollar) of N7RO's

From: jrh@owlnet.rice.edu
Message-ID: <CKysqn.LsG@rice.edu>
Source record: 271401

I am in the process of designing a dedicated power supply for a homebrew HF amplifier. The power supply will be used for nothing but the amplifier. The problem is, I can't seem to find any specifications in amateur publications for power supply parameters. So, I have the following questions:

1) What ripple requirement should I try to meet for a 13.8V power supply? Is 10mV too stringent or not stringent enough?
2) What kind of dynamic load regulation should I shoot for? I currently have a design that will operate at 15.5 volts with no load and 13.8 volts with full load. Is this good enough? What potential problems are they with such poor load regulation?

Thanks in advance!

Howdy,

Our ham club, Wabash Valley Amateur Radio Assn., goes to Dayton (~200 mi) in a chartered bus (one-day stay). Costs us 25$ per person.

The bus drives right up to the front door and lets us out. Then it stays in the parking lot where we can go to it and "take a load off" or get food from our coolers. (Dayton HF food ain't too good.)

If one buys stuff, (s)he can stash it on the bus instead of lugging it around all day.

Our bus stops for breakfast in the morning and for dinner in the evening on the way back to Terre Haute.

Why don't YOUR club look into this scheme? It's the ONLY way to fly.

From: horak@convex.com
Message-ID: <horak.760812890@convex.com>
Source record: 271404

I have a question to ask. While playing with my new Tropez 90 MHz phone the other day, I tried putting it into both of my microwaves (no I didn't nuke the phone :') and I guess I expected the shielding to cut off the signal, thereby causing the out of range indicator to beep. The phone was still able to communicate with the base. If the microwave cannot attenuate 900 MHz, is it really attenuating the GHz stuff? Would someone care to comment on the type shielding used in these ovens?

> but am curious about actual operating experience...
> Thanks, Matt KN6CR

My experience is that there is far more activity on 40 and
much less on 30. This makes operating on 30m a lot easier.
One of the problems at the moment is that the muf is often
hovering around 10MHz so the 30m is not useable much of time.

I just sold my 30m MFJ rig and am getting a Norcal 40 to replace it
if that's any indication.

: Read your own quote. You said that you didn't know. Apparently you
: *did* know. If you give out false information, then it would seem
: somewhat disingenuous of you to make accusations based on the response,
: would it not?

Well, I read the quote. It says "*I* am not sure..." And that was
true when Ed wrote it, because Ed doesn't have a copy of the
information. It doesn't say "*we* are not sure..." It would have been
better if Ed had searched out the information before posting, even busy
as he is, but he certainly isn't a liar.
Once again, you are jumping to a conclusion (that Ed knew one thing
and said something different) without benefit of supporting facts.

[deleted]

: Nor do I. However I think it unlikely that anyone will EVER get
: rich by writing construction articles for QST. Unless they can
: build a full-function HF transceiver for $100 :-)

The day, or close to it, will come. All-digital (well, *almost*
all-digital) receivers that take advantage of the enormous economic
benefits of VLSI will soon drive the cost down. (According to my
crystal ball.) The technology isn't quite there yet, but it's getting
close, fast. Not that that will make QST authors rich, though. :-)

: >You clearly don't have any personal knowledge of what any of
: >us understand and which ones of us have our feet firmly planted
: >on the ground and which have our heads in the clouds. I am forever
: >amazed how some can see a problem, imagine what *must* be the
: >only cause, and offer it to the world as gospel truth.

: I have been reading QST (in current issues) since 1973. In back-issues,
: since 1960. Is it still the official journal of the ARRL? Was it then?
: I think I'm in a fairly good position to judge, as an 'average ham,'
: just how in- or out-of-sync the League has been over the years.

That you think reading QST gives you great insight into the personal abilities and views of each HQ staffer amazes me. In the 17 years I read QST before I came to work at HQ, *I* never was able to draw such conclusions. But then, maybe you're just an incredibly perceptive fellow.

[deleted]

: >: The no-code ticket was instituted to reduce discouragement. The
: >: League fought it tooth-and-nail, until it was clear that the League
: >: had lost.
: >
: >Where did this one come from? It just kinda' jumped out.

: It demonstrates that the League is truly out of step, historically, with
: the population which counts.... ....the sum of the sets EXISTING
: radio amateurs and POTENTIAL radio amateurs.

As Ronald Reagan said, "There you go again." Please quote the research that shows precisely when and how ARRL policy was out of step with what these sets of people wanted.

[deleted]

: Uh huh. Isn't QST the 'official journal?' I don't recall ever seeing
: a viewpoint which opposed the board presented. I don't really ever
: recall a balanced presentation of an issue. What I do recall are
: presentations of and justifications of the Board's position. Again,
: I think it is a bit disningenuous to claim that QST is in any way
: editorially independent of the Board. That, from my reading of some 30
: years worth of QST, just won't fly.

You are confusing technical matter (which is what this thread was about, at one time) with non-technical matter. The Directors are not consulted about technical articles before they are published, nor do they set the technical direction of the magazine.

: >In summary, Greg, I suggest that you learn more about the ARRL before
: >you rip us to pieces.

: Yeah, I guess I'm just one of the rabble who doesn't know nuthin' 'bout
: it. Never mind my membership. I'm apparently one of the 'them' to your
: 'us' 'cuz I dare to suggest that there might be REASON why there is
: no clear majority of hams as members.

I've yet to see anything that could be characterized as a reason.
Just a number of broad, sweeping statements that are unsupported by any
presented facts. Greg, I don't in the least mind people criticizing
ARRL, and neither does Ed. But when the criticism rests on unfounded
assertions and leapt-to conclusions, we do get annoyed. So, don't be
surprised when we put forth the factual evidence that shows your
statements to be false.

: > There is enough real things to call us to task
: >for; pulling things out of a hat

: Are you looking for a list?

Ed and I each have our own lists. :-) We're always willing to add
to them, though!

[deleted]

: Oh. I see. Not only do I not know what I'm talking about, I'm 'not
: useful.' I lack facts (apparently because I disagree with your
: 'world view') and I don't think.

Well, those who don't know what they are talking about really
aren't contributing anything useful to the discussion. That's not to
say that *you* aren't useful, Greg. I'm sure you're very useful. But
you could be a lot more useful to the discussions on this medium if you
would reason from facts. If you feel that charge is unfair, there is a
simple solution: simply present facts to back up your statements. If
you don't, you open yourself to the charge of leaping to conclusions.

: I'll send the membership kit back by return post.

Too bad. Not only will you deprive yourself of the benefits of ARRL
membership, you'll miss opportunities to influence the course of
events. But, as always, it's your choice. Ain't freedom wonderful?

>If the microwave cannot
>attenuate 900 MHz, is it really attenuating the GHz stuff? Would
>someone care to comment on the type shielding used in these ovens?
>

I did a similar experiment with my Motorola pager, which operates in the
900MHz band. I was looking for locations in my house where the pager would
indicate it had no signal (little antenna icons appear on the display!) and
tried inside the microwave. Sure enough, the pager couldn't hear anything
in there.

I don't know why it wasn't a suitable Faraday shield for your phone!

> Well, at least Ed doesn't make "assertions" that he can't support
>with data. If he doesn't have the data at hand, he doesn't make
>statements as though they were facts.

As I have stated before, and as even someone with a sixth-grade level of
literacy ought to be able to glean from the above exchange, it was
Mr. Hare who initially indicated that he was 'unsure' of his facts.
I responded that such a thing suprised me, having assumed that some
survey would have been made and its results disseminated to the staffers.
Since the issue in question was one of being in or out of touch with
the ham population at large, this was very pertinent.

He apparently mis-represented that; he indeed does believe that he has
facts at hand.

> But I *do* have the data at hand. Our recent (1992) market survey
>shows that 35% of amateurs "enjoy building equipment or kits." 42%
>enjoy "experimenting with equipment or antennas." So the statement that
>few ever build circuits is clearly unsupportable.
> Now, where's *your* data?

I guess I consider almost 20 years as an active ham a pretty good basis
for what my fellows do and don't do.

But let's look at these "facts" with a critical eye, shall we?

1. 35% is not exactly a clear majority, now is it?
2. The 42% includes 'or antennas.' Considering that
antennas are generally NOT plug-and-play items,
I'd expect MOST hams have to do it. Does this
mean the other 58% hate it?
3. The phrasing of the question begs for a higher
number. They 'enjoy' it. I 'enjoy' sunning on
the beach on a tropical isle. Doesn't mean I
do it, or get to do it, very often. But I would
submit that there are some vested interests in
asking the question that way. Such as the advertising
dollar. And such as justifying the existance of QEX.
4. The very existence of QEX can be taken to mean two
things; there is sufficient interest to support a
whole distinct publication; or there is insufficient
interest to put the material into the mainstream.

And that it really doesn't support conclusions any more than the average
Joe Ham's experience. Of course, Joe Ham spends his money based on his
experience, more than Mr. Bloom's data. And it is also that experience
which leads him to stay in the hobby rather than take up snowmobiling.

>: >Some of the authors that have offered a kit have reported

>And only a few of these people have EE degrees. (Just enought to keep
>the other ones on the straight and narrow!) So, once again, the
>available evidence shows your "assertion" to be in error.

'Had experience' and where you work every day are two different things.
You get used to things. After five or more years, for example, it would
seem strange for me to work somewhere that had no internet access, even
though I know most people don't have it, and can remember what it was
like when it was a challenge to move data to a system four miles away.
That's normal. It really doesn't hurt anything, unless you *forget*
that you're in a different situation from most people, and fail to
accept that you have to do some different things to allow for it.

>I'm not going to rehash no-code, but I'll note in passing that this
>statement has all the accuracy of your other ones.

We must agree to disagree on this one. I, also, was opposed to no-code.
The difference between myself and the ARRL on this one is that I now
admit that I was being stupid, and club-ish, and elitist.

>: way, the League and QST have flirted with this policy from time to
>: time, but they can't seem to get away from the 'all home-built' ideal.
>
> Do you *read* QST? Have you seen the "New Ham Companion" section? I
>challenge you to find *one place* in the ARRL literature where it says
>a new ham should homebrew his station in order to get on the air. Just
>one place.

It was all over the older League publications.

Perhaps, if I have some time, I'll look up some citations.

Perhaps, Jon, you can fill us in on when the League and the editorial
staff thereof, conciously chose to change to a editorial policy where
home-brew was presented as an ancillary activity, rather than as an
ideal?

>full-page ads in *other* magazines. (Hey, maybe that's it... maybe all
>your complaints are really about another magazine, and you've just
>confused it with QST! At least that would explain why all of your
>"assertions" are 180 degrees out.)

Gee, wouldn't it be useful if we had an ARRL staff which, instead of attacking *MEMBERS* whose perceptions disturb them, claiming that 'all of your "assertions" are 180 degrees out' took the time to figure out what's wrong? Why do some people look at the ARRL this way? Why aren't a mojority of the hams members? Why do memberships lapse?

>: More correctly stated: 'by what the Directors want hams (particularly
>: new hams) to see.'

>heard a Director comment on the content of QST, it's invariably been to
>relay a *member* complaint or concern.

I guess that means that the content is pretty well in tune with the Directors' desires, then. Again, I base this on the facts that:

1. QST is an official journal
2. QST seems to be as good at covering opinions which dissent from the League line as the National Review is at covering liberal politics; conversely, the League's positions are about as well covered in QST as conservatives are in the National Review. I rarely see something in QST which would help a member make up his mind on an issue.

Perhaps it should be that way. I know I'd rather see it that way, and see it honestly admitted, than see it denied.

>: And good it was. QST Product Reviews are the ONLY ones I would ever
>: trust. Mostly because I've seen gushing, press-release quality *articles*
>: in 73 and CQ, masquerading as product reviews. It only begs the question

>: already, it was just recently the subject of a review in QST. Lots of
>: stuff of much lesser interest has appeared before this one. I mean,
>
>Uh, lesser interest to who? Got any support for that, Greg?

The first thing that springs to mind was the review of the SWL receiver which was in the PR section a couple months back. Did it really deserve a full-blown review? It was a piece of equipment of only secondary (and to give due credit, by the time the review was perused, I understood it to be more like 'teriary') interest to hams. The question is, was a full review necessary to establish that?

>the review article).
> This entire process took just about two years, the bulk of which was
>our waiting for Ramsey to deliver a promised radio--that we never got.

This is interesting information indeed! Certainly, there is some 'fault'
with Ramsey. It may even be that they knew what the likely results would
be. We'll never know.

However, the option to purchase existed all along. And, it seems to me,
that:
1. There was *some* responsibility to somehow inform the
readership of the problems seen with the first kit. After
all, these kits are probably one of the most appealing
items, especially to new hams, on the market today. QST
was very accomodating to Ramsey. Would that they would hve
been so to us! Again, this goes to an issue of being 'in
touch' with what hams need.
2. It is quite possible to 'tune' a kit. You can make sure that
all the components are within design tolerances, you can
take a very careful parts inventory, you can look at the
PC board with a very good magnifier, and you can generally
make sure that it's in the highest percentile of what you
turn out.

I wish, and I suspect some others do, that QST had pushed harder on this
one, and been more out front with those of us that pay the bills. Especially

when, as in this case, the initial work pointed to the possibility of a serious problem.

It's a much higher calling to point out problems for the ham-consumer, than it is to review the Conglomerate 1001D 8-band transceiver with DSP; of course the 1001D is a more fun toy to play with, but 95% of the time it works pretty much as advertised (across three color pages of QST, I might point out).
What it comes down to is, you guys knew, or at least had an inkling, that there might have been a problem. And you didn't tell us! I guess I'd expect that either you'd find a way to tell us, or push to get the Review done, to settle the matter.

And *THAT* is the kind of thing that I'm talking about when I claim that there is a divergence between what the ham radio population needs from the League's publications, and what they get.

I can think of no better example. And the 'facts' are Mr. Bloom's.

Greg

1260. Re: Antenna Erection Aids - Thor's socks

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-09 17:54:36 UTC
From: lbrunson@rodgers.rain.COM
Message-ID: <9402091910.AA23952@rodgers.rain.com>
Source record: 271409

I just have to put in my two cents here. I have used a bow and arrow, and a sling shot too. I have come up with another method I like for certain applications. I use an old sock. I seem to have plenty of them with holes in the heals. I prefer them when I am back packing and don't want to carry the weight of a sling shot. Also, if they get lost or stuck in a tree, it is no big deal (although I suppose one should use old brown wool socks filled with bird seed to be environmently correct... they sure are hard to spot when you loose them though).

When it is time to put up the antenna I scoop up some heavy material (dirt, sand, rocks, etc) and dump it in the toe of the sock. Then I either tie a line to it or sometimes I will tie the antenna to it and throw it like Thor's hammer.

I have sometimes put soft material (like sand) in it and thrown it on a roof. There is enough friction to hold it on many types of roofs and you just pull to get it back down.

So, if you go out in the forest and see socks hanging in the trees up about 30 feet, you know I was probably there on one of my (kc7)DXpeditions.

1261. QSLing via F6FNU

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-09 17:55:06 UTC
From: sas@opus.xyplex.COM
Message-ID: <9402091755.AA12482@opus.xyplex.com>
Source record: 271410

Doug Brandon asked...

>Does anybody know if F6FNU QSLs via the bureau?

The answer is a resounding *NO*! F6FNU has some easy-to-follow but strict rules if you want a card from a station he handles. Here are the rules, posted some time ago by Barrie K0WWG:

>"DX World" in the April [1993] issue of Worldradio points out the following
>rules which F6FNU has established:
>
> 1) You must QSL within 6 months of the activity.
>
> 2) You must include a self-addressed envelope (SAE) and $2 U.S.
>
> 3) No I.R.C.s or bureau cards will be accepted.
>
>Also, the article says that the 1993 Callbook address for F6FNU is
>wrong. Use the following:
>
> P.O. Box 14
> F-91291 Arpajon Cedex
> FRANCE

F6FNU has been dumped on by many hams regarding his QSL practices, but if you follow his rules, he is 100 percent reliable and quick, too. Don't waste your time using the bureau with F6FNU, and don't waste your time complaining about his rules if you want a card from him! :-) If it's been more than six months and you want a card, try anyway. Others have gotten cards from him beyond the six month period. The SAE/US$2/no IRC/no buro is hard and fast with him, though.

Nope...I've had 100% return from F6FNU also, but have never enclosed more
than US$1 per card. He's always returned the cards using reduced-rate
airmail (note the cut corners on the envelope) which costs him well
under $1.00 ($0.40 or so the last time I looked at the exchange rate).
So he's still making a very tidy profit at $1.00 per card.

>someone care to comment on the type shielding used in these ovens?

The biggest source of leakage in a microwave oven is the door seal. Modern
microwaves use what is called a "choke" seal. It is a tuned, narrow width,
groove formed into the outer edge of the door. The choke seal used is only
effective at frequencies greater than 2 GHz. There is also an upper freq
limit.

Microwaves leak bunches of RF inspite of these seals. Tune a receiver
to around 2450, and you will hear some of the trashiest RF.

Hi Folks,

I was wondering if someone could help me. I'm really new to
all of this, so bear with me... 8^)

I'm hoping to take the tech exam w/code sometime this month
or next. Right now I have a pro-2028 scanner, that I have
have about 5 local repeaters tuned to.

Every once in a while I hear on 146.8500 mhz (A repeater in
Derry, NH) some operators doing CW practice, as if in a classroom
environment.

This sounds extremely interesting to me, since I'm having a little
problem trying to get CW down pat...

Does anyone know anything about this, and if so, is this done on
a daily/weekly/monthly basis? Is there some sort of schedule?
I also think I heard them giving ARRL news also one night...?

Any help you can provide would be greatly appreciated!

Thanks Alot!!!

Probably exposure to chemical spraying of the course, and sun exposure.

As far as RF radiation causing cancer, try to get some cancer figures
from the Coast Guard concerning the high cancer rate among the omega
and LORAN navigation station operators. It's enough to make a QRP operator
out of you!

>

Yes. First, put down your pencil and force yourself to copy in your head.
In fast Morse, you don't want to try to pick out individual letters; rather
you want to hear entire words. Now , one way recognizing words is to make
up code tapes yourself consisting of common words you might hear during
a CW QSO: the, rig, ant, qth, ...; send each word at least a dozen times
and recognition will come very quickly (this is how I learned Vietnamese -
but Gary will quickly deny any correlation between learning a language and
learning code even though the methods of learning are the same: repetition!).

I'd wish you the best of luck but luck has nothing to do with it; just
practice, practice, practice.

72 to you Richard (and Gary, too!)

: |
: -------/\/\/\/\---o | o---/\/\/\/\-------
: E1 | E2
: |
: |
^^^ 36.5 ohms ^^^ 36.5 ohms
------------ 73 ohms ------------

: If we apply drive to E1-E2, equal currents are driven into each element's
: impedance. So the halves of the dipole have equal currents flowing in them,
: but 180 degrees out of phase. With the infinite ground plane isolating the
: halves, one half has half the total current flow.

Let's call the voltage applied between E1 and E2 "V". Since there are
equal and opposite voltages on the two terminals, the voltage applied
to each is V/2.

If, for example, V = 73 volts, the current in the dipole is 1 A (since
the radiation resistance is 73 ohms.) With the ground plane, the
impedance of each 1/4-wave element is 73/2 = 36.5 ohms. Since you have
half the voltage (37.5 V) applied to each half, the current is still 1A
in each 1/4-wave element.

The resulting field is the same for the ground-plane case as for the
dipole in free space. It is as if the other half of the dipole were

still present. That's where the concept of the "image" antenna
extending below the ground plane comes from.

I suppose, although I doubt they use much insecticide on golf courses.
(They're mostly grass, aren't they?)

I'm beginning to wonder if there is anything that DOESN'T cause
cancer. A local best-selling Doctor claims that milk causes leukemia.
If I remember his reasoning, it goes like this: A high percentage
of milk cows have bovine leukemia. Bovine leukemia is caused by a virus.
Human leukemia can be caused by the same virus. While Pasteurization
kills the viral organisms by breaking them into particles, those
particles are still capable of causing leukemia in humans.

Sounds like an awfully dubious string of assertions to me, but lots
of people buy the good Doctor's book. When it comes to cancer,
reason takes a back seat to fear.

I've been thinking about this a bit today (a dangerous thing to do!)
and I guess that the real issue is whether it is appropriate to run
a QSL manager operation for profit. I guess that a few managers make
a few bucks by managing QSLs for a DX operation, but it's generally
considered a public service to the amateur community.
I personally think that it's wholly inappropriate to charge upwards
of five times cost for the privilege of receiving a QSL card, as in the
case for F6FNU. You can't exactly pass a law forbidding it. But,
I recall that the DXAC was soliciting opinions on QSL practices last
year. Perhaps it would be appropriate for the DXAC to disallow DXCC
credit for any operation that utilizes an obviously for-profit QSL
manager.
Just a thought. Obviously, one would have to rigorously define what
a 'for-profit' operation is. In Germany, $1.00 is no longer sufficient
for air-mail postage to the states, for example. But the fact is that
in France, the cost of (reduced rate) air-mail postage is still
substantially under US$1. For-profit QSL managing just doesn't
seem to be in the spirit of DXing or amateur radio in general.

From: sbaker@umassmed.UMMED.EDU
Message-ID: <9402092126.AA29848@umassmed.UMMED.EDU>
Source record: 271332

I have been expecting to find out the call sign of a ham in Bosnia who is operating "clandestinely" from some bosnian refugees. I just received what the translaters obtained, it is like (but not exactly):

378-88-813-164

(I modified a couple of digits in case it is somehow traceable)

This is obviously not a call sign, or recognizable as a frequency. I wonder if it is an i.p. address for a packet mail network. It bears a slight resemblance to an internet i.p. address. The ham in question is purportedly located in Mostar, Bosnia and I am attempting to locate a way to pass health and welfare traffic. Thanks.

From: ham@wam.umd.edu
Message-ID: <2jbmp2$3jb@cville-srv.wam.umd.edu>
Source record: 271333

I have been on CW for about 7 years. I first learned CW at age 14, and promptly took two years off (so I forgot most of it). I re-acquired the ability to copy code, and in eight months was up to about 20 wpm. This was roughly 7 years ago, and JUST in the last year have I begun to start hearing words instead of letters. For me, this came at roughly 28 wpm or so (plus or minus a bit), and with a good amount of listening and operating.

For instance, when you see the word "INCOGNITO" or "AMATEUR" or "SCHEDULE" or virtually ANYTHING else, do you have any problem at all saying the word out loud? No, of course not, because you're been reading since a very young age. Now, if someone taught you the Hebrew alphabet and asked you to read Hebrew, you would have to sound out every letter. I guarantee that you would NOT appear fluent (this is my case).

Similarly, at age whatever, you have been taught the letters of the Morse Code. Words are made up of letters, but hearing letters and converting them to words is NOT equivalent to hearing words. I now hear words like the, and, or, if, you, etc., etc.

And suffixes, like -ing, -est, -ier, and -er.

Scott NF3I Just takes time, I guess. Throwing away the pencil is the key.

>I've also read that they tend to cancel out atmospheric noise.

The best place to go is the ARRL Antenna Book, the chapter on loop antennas (chapter 5, I believe.) You will find plans there on how to build a small transmitting loop with a large variable capacitor. It is similar in design to the AEA Isoloop, which I have used with success on 30m through 10m. (It doesn't cover 40m.) This antenna is difficult to build properly, and the parts are not readily available or cheap.

Another thing you can do is to erect a loop fed with parallel line. (450 ohm ladder line or good 300-ohm TV twin-lead) You will need an antenna tuner capable of supporting a balanced line. The loop should be at least 34 feet (1/4 wave) in circumference, but a 1/2 wave (68 feet) is probably better. Since you are feeding it with parallel line through a tuner, length isn't critical. It will probably work better mounted vertically. Since you are limited in space, install it however it fits best in the room you've got. This antenna won't work as well as a full-size dipole, but it should work.

Are these retunable for 2m? with the right split, or modifiable to be so?
(as easily as you described)

With a service manual, I wouldn't be afraid to retune an old commercial
rig, the trick (secret?) seems to be in knowing *exactly* what old rigs
will retune without (much) part swapping. Any (further) pointers on
sources and models to look for would be greatly appreciated!

Note - I've built a FX-146, and use it for packet only. It picks up
lots of stuff it shouldn't (I have yet to call and ask for the filter
that'll fix this). I expect it puts out the illegal harmonics that have
been repeatedly mentioned here. If anyone has or knows of a fix for
the transmitter, I'd love to implement it. I also wouldn't mind at
all were I to have a chance to put it on an analyzer and see just how
bad it really is... (Hey Al - Naw, I bet you're too busy....;-)

I can speak for Ham Radio and More. We are just getting started (first
Talk America show was in November). It takes a while to get things going.
We work as follows:
We do the show at a studio at KFNN in Phoenix.
Talk America calls us on three phone lines. One of those take audio from
us up to their network.
Another gives us program audio back in real time (as opposed to
the 8 second tape delay that you hear).
The third is used for the two production engineers to talk back and
forth.
They take the calls and call our guest (if the guest is not in-studio)
and mix all the stuff together.

There are a lot of places for failure, and we don't have enough practice to
get it all right yet. Our last problem was caused by a cable mis-plugged
in OUR studio.

If you think YOU are unhappy about production problems, imagine how Len and I
feel! But I'm not casting any blame - it's tricky stuff and the economics
don't allow the sort of fancy production capabilities that a Rush LImbaugh
or a TV station can do.

Has anyone had any experience with the mini UHF connectors, I've seen show
up on some of the new mobile commercial radio. They look like PL259
connectors, but are about half the size. They would seem to have the same
limitations that the regular kind, but has anyone checked them to see what
impedance they give and or return loss?

The Motorola Mostar 800Mhz trunked radio uses UHF connectors.
As far as I know, it's the only 800Mhz radio that does. It
also uses an automotive trailer power connector wired backwards
(exposed +12v), so I don't consider this to be an exemplary radio.

Drivel: One of my favorite dumb stunts is to solder type N connectors
on both ends of some stiff coax (9913) while still rolled into a tight
coil. When I straighten out the coax, the center pins pop out.

SYNOPSIS OF ACT

Solar activity remained very low. Region 7664 (S12W49)
continued its growth and became a small class D group. This
region produced several B-class events.

Solar activity forecast: solar activity should become low
with Region 7664 beginning to produce small C-class bursts. If
the current pace of growth continues, small M-class flares
could be observed in a few days from this region.

STD: Electrons at greater than 2 MeV have become elevated. The
enhancement began at about mid-day on the 7th. The enhancement

appears to be approximately similar in intensity to what was observed at this time during the last solar rotation. If flux levels continue to remain strongly enhanced over the next week as occurred last rotation, geosynchronous satellite anomalies may be observed.

Geomagnetic storm conditions continued. Mid latitudes experienced minor to major storm levels. High latitude conditions ranged between active and severe storm levels. The Forbush decrease noted yesterday returned to a near normal level.

Geophysical activity forecast: the geomagnetic field should become predominantly active for the next three days. Isolated periods at minor to major storm are forecast for mid latitudes and isolated major to severe storm periods are possible for high latitudes.

Event probabilities 08 feb-10 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 feb-10 feb

A. Middle Latitudes
Active 35/35/35
Minor Storm 35/35/35
Major-Severe Storm 20/20/20

B. High Latitudes
Active 30/30/30
Minor Storm 40/40/40
Major-Severe Storm 20/20/20

HF propagation conditions were significantly below normal over almost all regions today. Strong geomagnetic and auroral storming produced radio blackout conditions for transpolar and transauroral circuits. Absorption was widespread and relatively strong today. The storming raised LUFs and lowered MUFs. MUFs were decreased by between 30 and 50 percent over most regions. Fair to poor propagation was observed over even the low latitudes. Middle latitudes saw fair to very poor propagation. Storming is still in progress at the present time, although it is expected to subside slightly, later on 08 February. A return to near-normal conditions is not expected for several days yet, except over the lower latitudes where near-normal conditions may return on 09 February. Higher latitudes will require additional time to recover from this ionospheric storm.

The 3-Hr Ap Indices for 07 FEB 94 are: 30 65 35 109 86 51 42 16

SYNOPSIS OF ACT

Solar activity remained very low. New Region 7668
(N09E50) emerged rapidly and produced several optical flares
with B-class enhancements. Region 7664 (S14W62), which was
growing rapidly on 07 Feb, stabilized during the period. A lack
of data is inhibiting analysis.

Solar activity forecast: solar activity should become
generally low. Region 7668 is becoming a likely candidate for
low C-class subflares. Old Region 7654 is due at the east
limb at the end of the period and should start to elevate

activity levels at that time. Last rotation, Region 7654 produced four M-class and many C-class events.

The geomagnetic field was at active to major storm levels. Some high latitude sites experienced severe storm conditions. The severity of this disturbance appeared to be moderating toward the end of the period. More frequent active to unsettled k indices were observed at various observatories.

Geophysical activity forecast: the geomagnetic field should become predominantly active for the duration of the forecast period. Occasional minor to major storm periods are likely. The coronal hole responsible for this disturbance is quite elongated and disturbed geomagnetic conditions should be expected for approximately one week.

Event probabilities 09 feb-11 feb

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 09 feb-11 feb

A. Middle Latitudes
Active 35/35/35
Minor Storm 35/35/35
Major-Severe Storm 10/10/10

B. High Latitudes
Active 35/35/35
Minor Storm 35/35/35
Major-Severe Storm 15/15/15

HF propagation conditions were disturbed over most regions today. A moderate ionospheric storm is in progress. MUFs are depressed and LUFs are raised, decreasing the available bandwidth and resulting in more difficult communications, particularly for transpolar and transauroral circuits where propagation has been useless for a good part of the UTC day. Conditions are expected to remain disturbed over the next 24 to 48 hours before very gradually improving. Conditions are not expected to return to near-normal for at least several days, perhaps extending beyond 5 to 7 days.

Headline

The following is a QST
Ham Radio ticket, and a court says a Ham does have a right to a tower, and antenna.

*****
ARRL Suggests Lifetime Ham License

The ARRL has petitioned the FCC to make Amateur Radio operator licenses valid for life. In its petition, the League says that there in nothing in the Communications Act of 1934, that would prevent such a license term for radio amateurs. It wants a lifetime operators license to allow inactive amateurs to return to the service at the same class of license without the necessity of retesting. This proposal would apply only to operator licenses. Amateur radio station licenses would, by

law, still be limited to a 10 year term. A person with a lifetime operator license, but no station license, would not be permitted to operate a station of his own, but would be able to operate from the station of another amateur.

The League says that nothing in this proposal should have any effect on the FCC's call sign issuance program as it currently exist, or as proposed in the vanity callsign program. The ARRL says at this time it is not proposing to make this rule change retroactive, rather, it suggests the easiest way to implement it, is simply to extend currently held operator licenses from 10 years to life. No rule making number has yet been assigned to this ARRL regulatory change request.

*****

ARRL Asks For Vanity Comment-Date Extension

Word from Newington, CT., that the ARRL is asking the FCC for an extension to the Comment Cutoff deadline, on the Commission's proposal to establish a Vanity callsign system. The FCC's notice of proposed rule making, known as Personal Radio, Docket: 93-305, was released December 29, 1993, it has a comment deadline of March 7, 1994. The League said that it immediately decide to publish the text of the rule making proposal, in it's entirety, in the Feb. 1994, issue of it's QST

ARRL says it also is asking its members to make their views on the matter, made known to their elected representatives, but in its request for an extension of the filing deadline, until April 21st, the ARRL says that because the matter of issuing preferred call signs involves a scarce resource, the question of maintaining fairness in all aspects of the program must be addressed. The League also says that the March 7th comment deadline, simply does not allow enough time for ARRL members to express their views on the proposal. Nor will it let the ARRL board formulate a position, based on membership input, as to what position it should take. It's now up to the FCC to decide on this ARRL time extension request, we'll let you know when the Commission decides. (Reported by David Black, KB4KCH)

*****
Court Finds In Favor Of Ham Antenna

A federal appeals court has found in favor of a Minnesota ham in the latest round of a 3 year battle to install a tower and antenna. Back in January of 1991, Sylvia Pentel, N0MRW, applied to the city of Medota Heights for a zoning variance for a 68 ft. crank-up tower. At the time she was using a roof mounted vertical, which, she was unaware, violated the city's zoning rules. The city denied her application for a tower,

but did grant Pentel a special use permit to allow here to keep the vertical, but that did not satisfy N0MRW.

Pentel sued the city in U.S. district court. Her attorney, John B. Bellows Jr., K0QBE, argued that the ordinance restricting her tower and antenna was preempted by federal law. A law known as PRB-1, which requires a reasonable accommodation of radio amateurs. The U.S. Court of Appeals for The 8th Circuit, has ruled that in establishing PRB-1, the FCC was attempting to strike a balance between the interests of municipalities and ham radio operators. The court noted that granting a special use permit for Pentel's vertical was not an acceptable accommodation to the radio amateur under the terms of PRB-1 and ordered the city to try again. The court did put some limit on it's decision. It said the finding does not mean the city must necessarily grant Pentel's application for a tower. Rather it stated the Mendota Heights, MN, must make a reasonable accommodation to insure her interests as a radio amateur are protected.

*****
Ham Convicted of Harassing McDonalds Customers

A United States district court in Texas has written an end to the story of Terry VanSikle, WB5WXI, by sentencing him to 90 days of home confinement, 3 years probation, fining him $1000, and ordering that he undergo a group counseling program as directed by the probation office. VanSikle is a TV news cameraman at station WFAA who had been accused by the FBI of harassing customers at a McDonalds restaurant drive-through window in the Dallas area. He initially protested his innocence last summer. One newspaper even ran a 2 column feature about VanSikle, quoting him as saying that the frequencies used by McDonalds are posted on computer bulletin boards, and anyone could have been responsible.

But on the 18th of October, Terry VanSikle changed his story. He pleaded guilty to one count of violating Title 47, section 333 of the U.S. code by willfully and maliciously interfering with radio communications. Sentencing was set for early January, and that time he faced a maximum term of 1 year in prison and $100,000. fine. The lighter sentence of 90 days home confinement and probation falls under federal sentencing guide lines. It's mitigated by the fact that VanSikle has already has lost some $15,000. worth of scanners, two way radios, and other gear confiscated when he was detained.

Still, VanSikle's troubles may not be over. There's a likelihood of FCC administrative action to strip him of any federally issued radio licenses. And also there's the possibility of civil action against him by the McDonalds Corporation to recoup any losses incurred as a result of his

jamming their radio system.

*****
ARRL Reacts To NJ RF Fee Proposal

Officials of the American Radio Relay League have told the New Jersey Department of Environmental Protection and Energy that a State proposal to register and impose fees on radio transmitters, and other sources of RF, was contrary to federal law; at least as the law is related to radio amateurs. The New Jersey proposal exempted amateur radio stations at this time, but leaves the door open for future regulation of hams and imposition of fees. But ARRL general counsel, Chris Imlay, N3AKD, says that only the FCC has the power to license and regulate radio transmitters. Imlay says that applying the proposed regulations to amateurs would effectively preclude amateur radio communications in New Jersey. The NJ Dept. of Environmental Protection And Energy has extended the deadline for comments on the proposal until February 22nd. Hams in NJ, and the surrounding States, are being encouraged to write the NJ Legislature in opposition to the radio tax proposal.

*****
DXpediton

In DX, word that the LAMBDA Amateur Radio Club, LARC, will sponsor it's 3rd expedition from March 5th to the 10th. LARC members are planning to operate on HF and OSCAR 13, mode "B" and mode "S" from the Caribbean Island of Anguila in the British West Indies. The operators making the trip will be Jim Kelly - KK3K, Don Bledsoe - WB6LYI, Mark Wilcox - KC3XC, Tom Hendrix - KI4ZN, Howard Wyman - W9BVD, Norm Gray - KF7IK, James Keis - AF9A, and Wayne Shuller - AI9Q. A QSL for all operators is direct to their current call book addresses. This may well be the first OSCAR 13, mode "S" expedition for the record books.

*****
Free QRP Info

Two QRP nets, located in the Pacific Northwest, are now available to help you meet other low power enthusiasts throughout the country. The Northwest QRP Club meets every Monday evening at 0300 UTC on 10.123 Mhz. The Northwest QRP Club Saturday Morning Net can be found at 0730 UTC on 3.561 Mhz. If you're interested in receiving a free copy of their NWQ newsletter, please send an SASE to Bill Todd, 4153 49th Ave. S.W., Seattle, WA 98116.

*****
Exam Dates Set

Two ARRL national exam days have been set for 1994, May 14th
and October 29th. Details will be in the February Issue of
QST

*****
Marathon Ham

A ham who ran in the New York City Marathon last November, to
raise money for Cancer research, will be doing it again soon
on the West Coast. Fred Dube, AA8FQ, has announced that he
will run in the March 6th Los Angeles Marathon and will be on
the air before and during the race. With backing from ICOM
America, Dube says that he will hold as many QSO's as he can
while running the course. He says he plans to use repeaters
on 145.200Mhz, 146.925Mhz, 445.325Mhz, and 447.235Mhz. Fred
also will try his luck on the national SIMPLEX calling
frequency, 146.52. His frequency coordination is being
handled by the Baldwin Hills ARC. If band conditions warrant,
he also plans to try some 20 meter remote base operations.
Look for him on 14.295Mhz.

AA8FQ's participation in the New York City Marathon raised
about $2500. that was donated to the Sloan-Kettering Memorial
Cancer Center. This time the proceeds of sponsored miles will
benefit the Los Angeles Childrens' Cancer Research Fund. That
organization is considered one of leading pediatric cancer
research organization in the country. Ham's interested in
sponsoring miles to be run by Fred can contact him at (216)
721-2466. Meanwhile we at NEWSLINE wish Fred Dube, AA8FQ good
luck in his next run to save lives.

1306. Long range digital links

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-10 13:05:53 UTC
From: br@cs.cmu.edu
Message-ID: <CL0F1v.EzK.2@cs.cmu.edu>
Source record: 271357

Can any of you radio folks give me a hand with this?

I need a system capable of transmitting about 1 MegaBit per second
of digital data from anywhere on the planet. This would be a one-way
link. I'm sure this can be done, but can it be done reliably without
a satellite and lots of very fancy gear? If so, I have some questions:

How much might the equipment to do this cost?
How much would this equipment (the transmitter) weigh?
How much volume would this equipment (transmitter) occupy?
How much power would the transmitter require during operation?
How big would the antenna have to be?

If the problem is simplified to communicate within a single hemisphere,
does that make life alot easier?

Any information would be a great help!
Thanks very much!
Bill

1307. Re: "Flexible" 9913 (Was - Re: Coaxial cable)

> : > Some other things to keep in mind about 9913. Remember that you'll need
> : > special UHF N connectors if you plan on using the cable for UHF
> : > applications.
Some hams think they are special because of the price... actually,
their best purpose is that they are EASIER to install than to properly
install PL-259, *AND* they are weatherproof.

> : Also, regarding the N connectors, at what point do they start making
> : a discernible difference? I thought that NMO was supposed to do well
> : at least past the 70cm. band. -- Steve Bunis
The NMO is a mounting mechanism for antennas (mobile) and is NOT a
connector type. NMO is preferred for most all VHF/UHF mobile
applications, including Cell Phone at 875MHz.

> My dual-band 2x4MAX Comet has an so239 connector on it. Just how bad
> is a pl259 connection on UHF?
I should probably let Al, N1AL repost his excellent post from a year
ago, but he used good equipment (beyond what the avergae ham has
access to) and discovered that the PL-259 was worthy of the name "UHF
connector" well into the Gigahertz region... The superiority of the
"N" connector is mostly because to solder a PL-259 *PROPERLY* is
really a sunuvabitch, whereas making good "N" connector junctions is
only dependent on measureing carefully and understanding the process.
(VERY good article in 73 mag... May '93, I think...)

> Should I use an N to so239 adapter? I
> use 9913 on HF with pl259s and some copper tape.
Perhaps the PL-259 connectors are leaking into the 9913 cable. Not a
good situation... the adapter isn't gonna help that... the "N"
connector will, however... I use'em in my mobile HF... not for loss,
but for ease and weather-proofing... no environment is worse than
mobiling, especially this time of year!

: (>100W) soldering iron?

I got a chance to try one here in the ARRL Lab (a torch type, not one
that heats a soldering-iron tip). It worked okay, but I still think I
prefer the big soldering iron. Of course, I must point
out that I have had umpteen years experience with the big iron and
only about 10 minutes experience with the torch. :-)

The fact that I was able to use it after only a few minutes practice
does suggest that they work. I would much prefer to carry
one of them off on a Field Day wilderness expidition, or up a tower,
that an electric one. :-)

>are compact, made of copper pipe and are capable of multiband operation.
>I've also read that they tend to cancel out atmospheric noise.

One of my afternoon projects was a 3ft diameter loop with #16 wire and
a wide-spaced hamfest capacitor. The loop tuned on 12-30MHz and performed
as good or better than my attic dipole on 18 MHz. There was small
wire warming on 14 MHz. The antenna was on a pole (held by one hand) at the
ceiling level.
I think for 7 MHz you should be fine with #12 wire and 5-6 ft diameter.
As a side note, at the ceiling level the loop performs well only when
positioned vertically, not horizontally.

> Any advice for cracking the morse-as-characters to morse-as-words barrier?

At the risk of being redundant: PRACTICE.

Used to be a lot of on-the-air commercial cw that was interesting to copy, and that ran at pretty good speeds. Nowadays, for something interesting to copy, maritime weather stuff is only about 16 - 18 wpm, so you have to listen to hams chatting. But if you're not concerned with test passing, just comprehension copy in your head, lean back and listen at speeds a bit faster than you're comfortable with, work at picking out the words, and do it _often_. Nightly is good, and at least three times a week is mandatory...any less and you'll be older'n me before you make progress! You'll know when you start picking out the words, because suddenly 40 wpm starts to become intelligible!

Hang in there.

Having used vertical dipoles and (slopers) for some years I can attest
to their good but not always excellent DX performance. The problem with
many of the antenna theory texts and amateur radio antenna cook books
is that they are in reality painting a much rosier picture than most
amateurs can acheive in practice. This is largely due to ground losses at
low radiation angles from capacitive (lossy ground) efects and poor ground
conductivity. Yes, a vertical dipole will radiate all the RF, but the ground
will dissipate much of the very low angle radiation, thusly masking what
would in theory be an excellent DX antenna in a very minimum or realestate.

I have found the 160 meter GAP vertical to be a big disappointment on
160. Apparently a much better counterpoise is needed than the four sixty
foot wires GAP suggets.

On 80 meters it does a good job... can work the VKs on most mornings.

On 40 it does a good job in the early afternoon. I used to be able to
hear Europe on my sloping dipole as early as 1430 local time, but could
never be heard, even with 500 watts. With the GAP they usually respond
with at least as good an RST as I can give them.

On 20 the GAP seems a bit dead unless the band is very good.
I don't know why this should be. I would presume since its physical
length is over the 1/2 wave dipole requirement that it would work as
well as a vertical dipole, but again theory and practice seem at variance.

Has anyone else used the GAP (45 footer on 160-- 20 meters).

I would presume from my experience that its efficency varies widely
across its design frequency range.

Almost anyting will disolve styrofoam except water and alcohol. Paint
thinner, gasoline, kerosene, MEK, acetone. I would try paint thinner and
if that didn't suit me I'd use gasoline second it is not much more flamable
than the rest and it is quick drying.

Source record: 271369

A group of students from Georgia Tech is looking for a hotel room
in Dayton for the Dayton Hamvention. I know that sometimes people
have extra rooms because plans change, etc. If you have a room in
Dayton for that weekend, please let me know.

We would prefer to stay at Stouffer's. (I can hear the laughter
now.) I know it's a long shot, but if you or anyone you know
has an extra Stouffer's room, please let me know. Our club does
a fair amount of contesting and we'd like to meet some of the people
we talk to regularly.

Thanks for the help.

This is true if you are just passing through here and not planning on
staying here to live. If you plan to stay here to live you must contact the
Departement of Communications and they will issue you a callsign for the
area in which you will be residing. Otherwise for just passing through you
can use you current callsign and indicate that you are mobile within one of
the VE areas in Canada.

Hello everyone,I'm posting this message to all Amateur Radio ops that use
Mac's for this hobby.I have currently a BBS in Washington,DC that is
trying to come up with a solution for Mac files for the ham community.
The BBS is available 24 hours a day at 202-393-0502,running Hermes II
software,on a 2400 bd modem.Soon we will have higher speed acess.
We have a good selection of ham files as well more traditional shareware
aplications for the Macintosh.Give it a try!
Thanks for readin this message.

Ham radio is a big hobby with many different parts, interests and
sub groups. Any hobby that involves wireless communication
would qualify for it. This implies a number of things:
- The sheer number of activities will reduce the percentage of
participation for any one activity. It is like having a field
of hundreds of candidates running for president. If there
are more than a few credible ones then the percentages are going
to be small regardless of the numerical size of the following.

Further,
- I do not think that any one ham can reasonably claim to
represent all interests

- I do not think that even one organization can, for that matter
So it is not surprising that any one organization does not have all
the active hams, much less all people with call signs allocated by FCC.

But, I think that ARRL does really try to respresent the parts that
I am interested in. When I feel that does not, as I did when the
digital committee in its infinite wisdom requested 1.810 to 1.830
for automatic unattended packet, I write to my director. I wrote a
letter and had thirty or so hams co-sign it and sent it to W9prn. Followed
it up with phone calls and visits to make sure that he got the message.

>
>Gee, wouldn't it be useful if we had an ARRL staff which, instead of
>attacking *MEMBERS* whose perceptions disturb them, claiming that
>'all of your "assertions" are 180 degrees out' took the time to
>figure out what's wrong? Why do some people look at the ARRL this
>way? Why aren't a mojority of the hams members? Why do memberships
>lapse?

I can perhaps see your reasoning: customer is right, arrl is an
organization of/by hams and staffers work for ARRL and so on.
But when you assert that your statements must be accepted by all at
ARRL, you make an error in your syllogism. They do not work for you
(you in singular here). They work for all members and have to represent
their intestests as a *whole*. This may involve disagreeing with an
individual member now and again.

I owned and used one for a year or so. Worthless on 160, deaf on 80,
good on 40, mediocre to bad on 20. None surprising. It is a 1/2 wave
center fed on 40, 1/4 wave with a compromized radial on 80, 1/8 wave
with alsmost non-existent radials on 160, non-phased full wave on 40.

My live-and-learn experience in dealing antenna hype.

The Ramsey thread...It just won't go away!

While reading on the throne, I came across an article that brought to mind the Ramsey thread.

From Lamb JJ and Dudley B: "An Effective Low-Cost 'Phone and C.W. Transmitter of Modern Design," QST, Vol. XIII, No. 9, p. 9, (September 1929):

"We hams are not all located on Wall Street [NOTE THE DATE!!], nor do we have at hand the facilities and personnel of a G. E. Research Laboratory. Most of us, therefore, need not so much guard against reckless abandon in designing the expensive technically idealistic sort of rig but rather must we beware of becoming niggardly in providing sufficient equipment of the right type to give us our money's worth in ultimate performance. There is many an otherwise good set in which an apparently slight change in design in the interest of false economy has resulted in a relatively enormous sacrifice of performance. It pays to be sure a penny-wise design may not pan out a pound-foolish flop."

Are you reading this, Mr. Ramsey?

'Nuff said.

FYI (from rec.nude) -

Subject: Amateur Radio NudeNet
Date: Thu, 10 Feb 1994 02:13:10 GMT

It's once again time to announce the weekly ham radio NudeNet. We
meet on Thursdays at 14.265 MHZ +/- at 4:00PM PST (0000 GMT). The net sessions
usually last 1 - 2 hours, with an average of 10 or 12 check-ins.

Last week, we had 6 checkins. I expect the number of checkins to remain
a bit on the low side through-out the holiday period. Afterwards, especially
when propagation picks up in late February or early March, I expect the number
of checkins to increase again.
.
.
(snip)
.
.
This is a fledgling but growing ham radio net. You hams out there
should try to make it. Those of you that have participated in the past but
haven't showed for awhile ought to stop in again.

Those hams who are so inclined might want to post a notice on the
bulletin boards of any local landed clubs or maybe announce something in the
newsletter of any non-landed clubs you belong to. Let's get the word out!
.
.
(snip)
.
.
That's it for this week!

Source record: 271284

In general, 200 mV ripple should be adequate for most mobile type rigs. As for load regulation, the main thing is not to apply excessive input to the rig at any time; read the specifications to determine what that level is.

I tend to operate my mobile type rigs (in the shack) at reduced potential to increase reliability and lamp life. Thus, rather than goosing the rig to 14 Volts to get a little more output, I tend to run it at 12.2 or so; that way I may never have to fix the thing.

If your power supply has poor load regulation, try adding a bleeder resistor (dummy load); most of the time the majority of the increase occurs at less than 10% of rated load due to capacitors charging to peak values.

Let me know if I can help further; I used to do power supply circuit design for a living... 73 DE K6DDX

If I'm not mistaken, the LogiKey is the commercial version of the CMOS Super Keyer II which was first described in the November 1990 issue of QST. That keyer is available in Kit Form (i.e. parts, pcb, but no switches, boxes, or batteries) from:

Idiom Press
Box 583
Deerfield, IL 60015

When I bought mine (it is a WONDERFUL keyer), I paid $45 + $3 for domestic USA shipping. Foreign orders were $45 + $5.

Sorry, that's all the info I have.

/\

POT

UPDATED: 18:00 UT, 10 FEBRUARY

/\

ATTENTION:

High energy electrons at greater than 2 MeV remain enhanced. Levels observed since about the 7th are approximately the same as what was observed in January. Geosynchronous satellites (and possibly lower orbiting birds) may experience anomalous charging events as a result of this activity. It is reasonable to suspect that this activity will continue for several more days at least, given the extent of the responsible coronal hole. This may increase the risk for deep charging events given the unusual duration of this activity.

** End of Warning **

This is, I believe, a telephone number. 387 is the Bosnia country
code, the next two digits are for the city in question, and the remaining
six are the local number. Sarajevo, for instance, is 387-71-XXX-XXX. Some
local numbers do have seven digits. The amazing thing in this war is that
the phones will occasionally come to life and people trapped inside can
telephone out. It is much more difficult to make a call into the country,
since the few lines that remain are almost always busy. Good luck if you try
to get through. I have been attempting to send a fax to the United Nations
Protection Forces in Sarajevo on behalf of one of our local correspondents there for
nearly two weeks without much success.

/\

ADMINISTRATIVE BULLETIN

10 February, 1994

Correction to Anik Failure Reports

/\

CORRECTION TO THE ANIK FAILURE REPORTS

It is unfortunate and somewhat ironic that a report which is intended to clarify conditions which contributed to the Anik satellite failures on 20 January 1994 must itself be clarified. We apologize for this.

Too much emphasis was placed on the non-recurrence possibilities of high-energy electron fluxes. The report stated that the possibility of observing a recurrence in high-energy fluxes was "highly speculative." This is incorrect. There is overwhelming evidence that recurrence of electron fluxes is correlated with coronal holes. If the coronal hole in question is stable and persists for more than one solar rotation, you can statistically expect to see a recurrence in the same electron activity as well.

What we should have stated, instead, was that the DURATION and TIMING of the the recurrent electron activity may not be as predictable, particularly if the structure of the coronal hole changes substantially from one rotation to the next. I was surprised to actually see this in the final report. Unfortunately, it was not properly reviewed it before it was released. I must therefore take responsibility for this inaccuracy and do hereby formally apologize for any misconceptions this may have caused.

Electrons do recur with coronal holes. Since February 7th, we have observed a recurrence in the electrons which affected the Anik birds in January. The duration and magnitude of the activity has been (so far) and is expected to be approximately the same as was observed last month. This again raises the possibility that some birds may see additional deep dialectric charging events. Satellites in lower orbits are not free from the effects of this activity. Although the high-energy electrons do tend to concentrate along the outer area of the magnetosphere, some lower orbiting satellites can also be affected by the higher electron concentrations.

The rest of the report is accurate enough. Solar flares and magnetic storms can be dismissed as the source. We simply needed to clarify that electron recurrence is correlated with coronal holes and is not in fact "speculative", as well as the possible vulnerability of lower-orbiting

satellites.

If the previous erroneous report is reproduced in newsletters or publications, feel free to edit it so that the above corrections are included. If necessary, send me a copy and I'll proof read it for correctness.

Of course the appliance operators will buy ready knitted
socks. The real hams will knit their own - no doubt from recycled
sweaters.

Many hams prefer the Wigwam brand of socks. Some users report
good results with military surplus socks, but they often require
modification before use.

Source record: 271297

Thanks for your reply Terry.
Since the Vertical mail made it out to the usenet, I'll
fill in the details. I'm interested in constructing a
ground plane for 20 and/or 40 and was interested in
finding out what has worked for others in terms or
materials and layout. There is an artical from 1988
QST describing elevated GP ants using 4 radials, rather
than 120+ buried, and claiming good theoretical results.

Specifically in my installation, I lack high supports
for dipoles, zepps etc, and although my ladder line fed
80' flatop apparently works well, I was hoping to achieve
a low angle of radiation and possibly better DX conditions
by going vertical.

A more appropriate forum for this is probably r.r.a.antenna,
and I'd happily take comments to my e-mail box.

Best 73s,

Mark C.

>half the voltage (37.5 V) applied to each half, the current is still 1A
>in each 1/4-wave element.
```

Yes, yes, I understand that, but look at what you're saying, "the current is *still* 1A in *each* 1/4-wave element." Since the dipole has *two* elements, 1+1=2, it's instant flow is twice the current of a single element. (I understand what phase does to *net* current at the *feedpoint*, but that's really a different issue. When the barrier of the infinite ground plane comes into play, it *isolates* the two branches so we can treat them separately. Hence we can see the individual 1 ampere flows at the feedpoints of the two halves without phase combinations.)

Let's examine *why* an antenna radiates for a moment to see what I'm getting at here. Radiation occurs when an electric charge is accelerated. The relevant factors are the amount of electric charge, RF current, the accelerating potential, RF voltage differential over the charge path, and frequency, the rate of change of voltage along a current path. These three are all intimately related, but in most antennas, the instanteous current is a key to predicting radiation field shape, and hence gain. The 1/4-wave monopole in the example has half the instant current of the dipole, and half the total end to end electrical potential. So crudely it would seem to have 1/4th the field strength, but it's length is 1/2 as great (frequency effect) so the accelerating gradient is the same. That leaves the *signs* of the current flows that make the field of a free space dipole. These vector sum to the same field strength as the monopole over an infinite ground plane. The dipole's currents generate fields which vector sum in a way that makes 1+1 appear to equal 1. The ground plane should be seen as a *shield* to prevent this summing, not as a mirror.

>The resulting field is the same for the ground-plane case as for the
>dipole in free space. It is as if the other half of the dipole were
>still present. That's where the concept of the "image" antenna
>extending below the ground plane comes from.

Uh huh, but an "image" antenna extending below the ground plane is not reality. It's a visualization trick that's sometimes useful, but the currents that actually flow are induced currents flowing along the surface of the conducting plane. They are *not* the same as the currents that would flow in an "image" antenna. They are the currents a *field* generated by the image antenna would induce in a perfect conductive sheet. This is important to understanding the effects of *real* ground planes which are neither perfectly conducting, nor infinite in extent. And is the reason *real* 1/4-wave monopoles over *real* ground planes have less gain than vertical dipoles, or 1/2-wave vertical monopoles.

Gary

1350. A is for alpha.....

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 00:00:42 UTC
From: erik_read@qms1.life.uiuc.edu
Message-ID: <erik_read-100294175751@gardner2.life.uiuc.edu>
Source record: 271302

I have a friend who speaks english badly and does not choose words to describe the letters. I think the military has a thing where they use standardized, easily recognisable words, like alpha, bravo, charlie, etc.....
I myself do not know them all and I really think that this would help a lot.
Can anyone help me? Is this the right place to be posting?

Thanks in advance; Erik

Easy to say. Some of us find it to be impossible however.

Well short words can be considered simply extensions to the alphabet,
as in Chinese and other pictographic representations of words rather
than characters. The problem comes with longer or less familiar words.
Then you're back to character by character spelling to determine what
was sent.

I can wait and recognize "the", but when it turns out to be the
opening character group in "Thessalonian", I'm screwed. Dealing
character by character on paper insures I get either correctly.

Gary

> a satellite and lots of very fancy gear? If so, I have some questions:

This is a *very* demanding application. To get global coverage without benefit of relay, you're basically forced to use ELF, but you can't get high throughputs at ELF because of the limited bandwidth. It's easy to get 1 Mbit/s throughput at UHF, but you're restricted to slightly greater than line of sight range, or somewhat more if you do high power forward scatter. At HF, you can get spot coverage to portions of the globe due to ionospheric refraction at certain times, under certain conditions related to time of day, solar cycle, etc, but the multipath (selective fading) of such channels makes high data rates difficult at best.

This application demands either wireline or satellite relay to be practical.

> How much might the equipment to do this cost?
> How much would this equipment (the transmitter) weigh?
> How much volume would this equipment (transmitter) occupy?
> How much power would the transmitter require during operation?
> How big would the antenna have to be?

All of the above can be answered "a lot" or "huge".

> If the problem is simplified to communicate within a single hemisphere,
> does that make life alot easier?

A bit. You could bounce the signals off the Moon, but that's not available 24x7, and would still require huge amounts of power and antenna gain to achieve 1 Mbit/s throughput. Meteor scatter could give you a 1500 km radius under ideal conditions, and would require slightly less demanding equipment (but only *slightly* less).

The problem is the need for 24x7 communications to *anywhere* on the globe at 1 Mbit/s. If you needed spot coverage to selected points on an intermittant basis determined by external conditions, or you could accept *much* less throughput, then the problem begins to become doable. It's still hard without artificial relay, however.

Sounds like this is a balloon experiment from the parameters you set out. You're not going to be able to get global coverage at high data

rate from a balloon borne package without external relay.

>in front of me...)

The problem with putting compression fittings on 9913 is the low braid coverage. It really has nothing at all to do with the dielectric, which never enters into physical connections. Since it uses foil for the bulk of it's shielding, and the braid count on 9913 is way down, you tend to get connectors that tear off easily. Newer 9913 has more braid than older lots so it works better. The better solution is to use the crimp connectors designed for 9913. I like the Kings brand best. This captures the braid between two barrels and crimps them into a solid unit. Because it engages much more braid area than the gland, which only pinches a narrow circle of braid, the crimp connector makes a much stronger connection. You need the proper tooling to attach these connectors, gas pliers don't cut it, and the tooling is expensive, but it's worth it.

The 3-Hr Ap Indices for 08 FEB 94 are: 63 48 67 87 87 35 36 41

SYNOPSIS OF ACT

Solar activity was low. Region 7668 (N08E35) was
the most active this period producing several optical flares
with B-class enhancements while showing good white light growth.
Rgn 7664 (S12W75) produced the only C-class flare this period
which maxed at 1822. This rgn is also showing growth as it
approaches the west limb. All other regions are stable.

Solar activity forecast: solar activity is expected to be
low with Regions 7664 and 7668 showing the most promise for
C-class activity. Old Region 7654 (N09, carrington 207) is due

to return late on the 11Th. During its last rotation, it produced 4 M-class and 27 C-class flares.

At middle latitudes, the geomagnetic field has been at active to minor storm levels while at high latitudes, the field has been at mostly active to major storm levels with isolated severe storm conditions reported. A favorably positioned coronal hole is believed to be responsible for the storm conditions.

Geophysical activity forecast: the geomagnetic field should remain at mostly active levels for the duration of the forecast period. Occasional periods of minor to major storms are still likely. Disturbed geomagnetic conditions should be expected for the next six days.

STD: High energy electrons at greater than 2 MeV continue to be observed. Satellite charging anomalies are possible and will remain possible for as long as this enhancement continues.

Event probabilities 10 feb-12 feb

Class M 10/15/20
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 10 feb-12 feb

A. Middle Latitudes
Active 50/45/20
Minor Storm 15/15/10
Major-Severe Storm 15/10/05

B. High Latitudes
Active 50/50/55
Minor Storm 15/15/10
Major-Severe Storm 10/10/10

HF propagation conditions are disturbed over all regions. Although transpolar and transauroral circuits have been hit the hardest, degradations have been noticed through to the equatorial regions. MUFs are well below normal, depressed by between 20 and 50 percent. LUFs are also elevated, narrowing the available bandwidth. Periods of total radio blackouts are continuing to be observed for transauroral and transpolar circuits. Although conditions are expected to very gradually improve over the next week, nothing substantial is expected.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

No, you won't receive a QSL from F6FNU via the bureau. Nor will he answer
cards sent to him via the bureau. I have sent many cards to him direct
for various DX stations, and I have always received a prompt reply. What
he requires is a legible QSL, an SASE, and sufficient $$ for return postage.
Not too much to ask...

We meet on Thursday nights at 0000Z on 14.265Mhz +/- 10. Tonight there
was only 8 checkins, but it's still wintertime... In the spring and summer
there's usually 10-20 checkins.
We wind up talking about nude beaches, nude resorts, natural (free)
hot springs, stuff like that. Maybe talk about some new law banning skinny-
dipping here or there, and sometimes one of the local nudist/naturist groups
succeeds in stopping some new law or ordinance from happening.
Tonight we started to formulate plans for a commemorative(sp?) QSL
card and/or certificate for Nude Recreation Week, which happens July 4-10 this
year. Yes, the picture QSL will have nude people on it, just don't expect any
"centerfolds". I'll provided details about operating times and freqs for the
"Special Event" as we decide on them.

BTW, hams in the nudist/naturist "community" have noticed a far higher
per capita ham population among nudists/naturists than in the general
population. Wonder why that is?

73,
-jim

I was about to say "check us out sometime", but I think I'll refrain.

I haven't tried this, but remember that a receiver is orders of
magnitude more sensitive than the permitted leakage of an oven.
The oven can leak up to 5 mW/cm^2 at 5 cm, while a good receiver
can detect femtowatts.

1360. So what happened to the Kenwood TR-751 & TR-851 ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 03:42:03 UTC
From: brian@umbc.edu
Message-ID: <2jeuqbINN5br@umbc7.umbc.edu>
Source record: 271312

Upon trying to buy a Kenwood TR-851A, I was told that it was
"quietly discontinued" by Kenwood. Does anyone have any idea why?

Does anyone have a good suggestion for a good 440Mhz base unit ? I don't
really need the all-mode capabilities of the 851, but I liked the idea that
it didn't have teenie-weenie controls to make it fit in a car nicely.

1361. FOR SALE: YAESU 470 DUAL BAND HT!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 04:19:08 UTC
From: trop@hls.com
Message-ID: <1994Feb10.201912.1416@hls.com>
Source record: 271313
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

FOR SALE: Yaesu 470 Dual Band 2m/70cm handheld tranceiver

Includes: Standard battery pack (FNB-17)
AC Adapter/Charger
Standard rubber duck
Radio case
Wrist strap
Optional alkaline battery case

I purchased this radio as a backup radio to my primary 470. I have since purchased another backup radio and would like to sell this one. It has essentially been sitting in the box since I purchased it and really hasn't been used for more than a couple of hours (it still has the protective cover over the keypad!). All manuals and associated documentation are included with the original box. I have used the battery that came with it, so you have your choice of battery. Prices are firm and include 2 day FEDEX delivery, although a Bay Area buyer is preferred.

HRO price ~$340 + 15 for the alkaline battery case
$275 with original battery
$290 for battery with new inserts (has some scratches)

Email or phone for more info on this radio or its features

A reminder for the Gosford - Central Coast Field Day

This Field Day is on again on Sunday 27 February, at the
prestige venue of the Wyong Racecourse in Howarth St. Wyong.

There is plenty of room for all, a most pleasant location and
an airconditioned building in case of hot weather.

ANARTS will be there again this year with displays both static
and operational. There will also be some computer graphics to
feast your eyes on.

As well, the Morse contest will be running again. It was such
a success last year that it will be a feature of the stand
again this year. Polish your sending and receiving skills and
come along and participate in this most historic method of
amateur digital transmission.

Tell you more as the event draws nearer.

Guidelines for the preparation of programs for transmission by
---------- Amateur Radio Teletype
---
from Frank VK2FJL
page 4

(C) Avoid the use of incompatable UPPER-CASE characters
such as: maltese cross, exclamation mark, semi-colon,
ampersand, plus sign, pound sign, dollar sign, slash,
percent, commercial at and other off-beat hieroglyphics
as these may well print out as something altogether
different on the receiving machine, often completely
destroying the intended effect.

(D) When preparing a picture, you will find it easier if
you first draw your picture onto graph paper. outline
your drawing in similar fashion to the drawings found
in children's colouring books. Draw in the lines div-
iding the different areas of shade. Next, decide on
which character you will use to shade each area. Then
simply `knit' your new picture onto punch tape `one
stitch at a time' and ensure that correct end-of-line
protocol is used. Take care, after your second picture
it is possible to become `hooked' on RTTY art.

(10) QUALITY CONTROL.

Finally, a brief word on the content quality of text trans-
mitted by your station. Remember that whatever you trans-
mit by RTTY lives on in print for other members of other
households to read. All transmissions under your callsign
reflect the standards of your station and serve to either
enhance or damage your reputation with other amateurs and
their families who share an interest in our hobby.
The final choice is yours.....

CONCLUSION

It is hoped that these `ten commandments' for RTTY
program preparation will help to promote an even higher
standard of RTTY among VK amateurs.......

HAPPY RTTY-ING

The preceeding text has been transcribed from information
received from VK3EW David. June 1987.
I trust that it will prove of value to interested amateurs.

73's. De VK2FJL.. Frank.. Central Coast NSW..

EA WW RTTY Contest

Date: February 12-13, 1994

QSO Points: On 20, 15, and 10 M : 1 point for QSO within own
continent, and 2 points for QSO outside own continent. On 40

and 80 M, 3 points for QSO within own continent, and 6 points for QSO outside own continent. QSOs within same DXCC country are valid only for multiplier credit, but have zero QSO point value.

Final score: Total QSO points on all bands times total mulipliers on all bands.

Awards: Plate to winner in each class. Certificate to winner to winner in each DXCC country in each class. (Must have 50 or more QSOs.)

Logs: Use separate logsheets for each band. Include a summary sheet to show scoring and other essential information.

Deadline: Mailing deadline is April 9, 1994.

Mail entry to:

EA RTTY Contest Manager
Antonio Alcolado, EA1MV
P.O. Box 240
09400 Aranda de Duero (Burgos)
SPAIN

Best of luck

IPS weekly report
---
28 January - 3 February 1994

Issue no.: 05

Date of issue: 4 February 1994

Date 28 29 30 31 01 02 03

Summary of activity

Solar activity was very low 30th January to 2nd February, low on 3rd February, and moderate 28th-29th January. There were two M1 flares on 28th and two M2 flares on 29th.

The geomagnetic field at Learmonth (WA) was quiet to unsettled 28th-30th with one active period on 29th, quiet 31st-1st, returning to quiet to unsettled on 2nd-3rd with an active period on 3rd from 1200-2100UT.

Ionospheric F2 ctitical frequencies at Sydney were near predicted monthly values on 28th, and parts of 1st and 3rd, otherwise 15-35 per cent above predicted monthly values. There was some Sporadic E around 1700 and 1800UT on 1st.

Forecast for the next week (28 - 3 February)

Solar : Low.

Geomagnetic: 4-6 February quiet to unsettled and an active
period is expected for 7-11 February.

Ionospheric: Near predicted levels to 20 per cent above, then
about 15 per cent below predicted monthly levels
from the 7th-11th February.

How about the U.S. Air Arena (formerly the Capital Center)
just outside of Washington, D.C.?

You know how huge it is inside if you have ever watched
a basketball game televised from there. It has plentiful
parking around it for "tailgating" and parking. Additional
parking is available at a nearby community college. It has
3 hotels within a stone's throw and many more
within a 10 mile radius.

The city is served by 3 major airports, Amtrak, bus lines,
Interstates 95, 70/270, and 66, has a subway station
within 5 miles of the Arena, etc, etc. An off-the-cuff
guess is that there are several transportation companies
from whom to extract a reasonable price for shuttle
bus service as necessary.

Not to mention the historical attractions and museums in
town. Hell, in a few years you can see what all the
bruhaha over Disney was all about.

And, of course, if it is held in April you can see
the 1994 World Series champion Baltimore Orioles
at their new home. :)

Now, all DARA has to do is sell our club the rights
to being the biggest and best and it's no problem. :)

CABLE RATE FREEZE. See first item under "NEWS
RELEASES" above.

Report No. DC-2567 ACTION IN DOCKET
CASE February 8, 1994

FCC FREEZES CABLE REVENUES WHILE IT
FINALIZES RATE REGULATION
(MM Docket 92-266)

The Commission today extended its freeze of
regulated cable
service revenues from February 15, 1994 to May 15,
1994, to give
affected parties time to familiarize themselves with any
modifications to the Commission's rules that the
Commission may
adopt later this month when it considers pending petitions
for
reconsideration of the cable rate regulations. The freeze
will
also facilitate the orderly implementation of any new rules
that
may be adopted at that time.

In the absence of this freeze, cable operators could
increase
their revenues while the Commission is completing its
pending
reconsideration of cable rate regulations. The
Commission expects
to have any modifications to the rules, which may result
from the
pending reconsideration, in place by the time this freeze
expires.
As a result, this freeze will prevent unjustifiable rate
increases
before franchising authorities have been given the
opportunity to
become familiar with any revised rules and prepare to
regulate
cable television rates.

As of January 31, 1994, the Commission has received
4,896
applications for certification from local franchising
authorities
covering approximately 7,534 communities serviced by
cable, which
represents a significant increase from November 1993.
The freeze
period is the minimum amount of time necessary for
franchising

authorities and other affected parties to familiarize themselves
with any new rules that may be adopted and prepare to regulate
cable operators before the effective date of any such rules.

Cable operators may petition for relief from the requirements
of the freeze where the operator can show that the freeze is
causing severe economic hardship or threatens the viability of
continued provision of cable service.

Action by the Commission February 8, 1994, by Order (FCC 94-
33). Chairman Hundt, Commissioners Quello and Barrett, with
Commissioner Barrett issuing a separate statement.

February 10, 1994

OMB DESIGNATES FCC AS PILOT AGENCY FOR
PROGRAM PERFORMANCE PLANNING

The Federal Communications Commission has been designated by the Director, Office of Management and Budget
(OMB) as a Government Performance and Results Act of 1993 (GPRA) program performance planning pilot for fiscal years
1994, 1995, and 1996. Participation in the program performance plan pilot, which encourages the development of alternative
performance indicators, would provide the Commission with the opportunity to re-evaluate existing performance indicators and
provide some insight into developing customer service standards as a means of measuring program performance.

The pilot designation covers the Private Radio Bureau's Land Mobile Radio Application activity, and the Office of
Engineering & Technology's Equipment Authorization activity. These and other Commission licensing activities are uniquely
representative of the type of federal functions identified in OMB's GPRA implementation plan, since they span multiple service
categories and represent a sizable portion of the Commission's workload. Further, as the Commission's current management
reporting system includes much of the necessary framework needed for program performance planning, its current operations
provide an ideal environment for testing various features of the Act and for developing final agency guidelines prior to
government-wide implementation of program performance planning in FY 1998.

In his letter to Chairman Hundt, OMB Director Leon Panetta said: "With this new Act, we have the means at hand for
bringing about basic changes in how our Government works and is managed. These changes will not be easy or simple to
accomplish. The pilot projects are a valuable opportunity to gain experience in achieving this transformation."

In fulfillment of its role as a program performance planning pilot, the Commission will prepare and forward to OMB
annual program performance plans and reports on actual program performance. OMB will use the results of the Commission
pilot, together with the results of other federal agencies' pilots, in developing its pilot summary report to Congress in which it
may recommend revisions to the GPRA.

The GPRA was passed in response to Congressional concerns that government programs lacked sufficient articulation
of goals and therefore cannot provide adequate information on program performance.

-FCC-

News Media contact: Patricia A. Chew at (202) 632-5050.
Office of the Managing Director contact: H. Walker Feaster at (202) 632-0923.

February 9, 1994

FCC ISSUES INFORMATION REGARDING CABLE RATE COMPLAINT PROCESS

Some recent news reports have indicated that, after February 28, 1994, cable television subscribers, franchising
authorities and State and local government entities will not be able to file complaints in response to changes in cable programming
service rates. The purpose of this announcement is to clarify the legal requirements related to filing complaints under the Cable
Television Consumer Protection and Competition Act of 1992.

The Cable Act provides that cable subscribers, franchising authorities and State and local government entities should
have a reasonable period of time to complain about changes in their cable programming service rates. The Commission has
established that reasonable period as 45 days from the date the subscriber receives a bill showing a rate change.

However, the Cable Act provided that, following the Commission's adoption of regulations to implement the Act, a 180-
day complaint period would apply to give affected parties additional time to file complaints. That 180-day period, which will
expire on February 28, 1994, applies only to complaints filed in response to rate changes made following the implementation
of the initial regulations on September 1, 1993.

Cable subscribers, franchising authorities and State and local government entities will continue to have 45 days to
complain about changes in cable programming service rates. Therefore, cable subscribers, franchising authorities and State and
local government entities will continue to have the opportunity to ask the Commission to review what they believe to be
unreasonable changes in rates for cable programming service. In assessing the reasonableness of a rate, the Commission will
consider the total rate and not just the most recent rate increase. This opportunity will continue, for example, regardless of any
changes to its rules the Commission may or may not adopt at its meeting on February 22, 1994.

Under the Cable Act, the Commission does not regulate the basic service tier, defined in the Cable Act as the program

package which includes signals from local television stations (such as ABC, CBS, and NBC affiliates and independent television
stations).

(over)

-2-

Rates for basic tier service are regulated by local franchising authorities, who must first certify their intent to regulate with the
Commission. The Commission is responsible for the regulation of rates for cable programming service, which includes all
channels not included in basic service and not offered separately as pay-per-channel programming or pay-per-view program
services, and related equipment.

Complaints must be filed on FCC Form 329, the Cable Programming Service Rate Complaint Form. Anyone wishing
to file a complaint in response to cable programming service rates should write to the Federal Communications Commission,
Cable Form Request 329, Post Office Box 18238, Washington, D.C. 20036 or call 202-416-0919 to request a copy of Form 329.
To obtain assistance in completing Form 329, call (202) 416-0902. The complaint form may be returned to the Commission by
mail or by facsimile machine.

It sounds like you might know something about this.
So, now that you have raised your hand :)

I have gotten a bug up my rear to configure our point-to-point
repeater linking system with digital paths ranging 20
to 40 miles apart.

We currently use plain old analog audio Motorola MICOR
UHF mobiles to do the linking between repeater sites,
and they work well (naturally!). However, my calibrated ear
frequently cringes at the minor white noise which
accumulates over the multiple hop links, such as
those which traverse 3 or 4 hops. By the time the
signal gets to the fourth site, there is enough
additive noise and minor equalization and level
difference that I believe that digital transmission
would provide superior performance.

I am certain that I am not breaking new ground here.
Has anyone played with this who could comment on
how practical this would be?

I just received a catalog from Consumer Microcircuits
Ltd in the U.K. listing a CVSDM codec. I remember
playing with these in electronics lab in college;
would these provide a narrow enough digital signal
to shove through a radio system designed for 5KC
bandwidth given a band-limited audio input to the
codec?

I don't recall if the output of such a codec would
be transmittable over the air or would require
a modem of some sort. If so, this might kill it.

Our link system currently consists of link repeaters
serving a locale, linked to the next hub via a
transciever located at that next hub site. I envision
a digital system which could sync up rather quickly
as the transceivers keyed up each time. I would rather
not put up a full-duplex RF system just to keep
the modems happy. I have lots more to tell but
I'll shutup now.

Comments?

1368. Looking for authors of FFTMORSE/DSPMORSE

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 09:33:43 UTC
From: kayd@OES.ORST.EDU
Message-ID: <2jfjdn$fu3@gaia.ucs.orst.edu>
Source record: 271320

I've done some major overhauling of DSPMORSE which was based on FFTMORSE in order to get it working on my 486DX-33 w/SBPro. It no longer requires ct-voice.drv, but does now include some SB Freedom Project code for DMA routines. I worked about 7 hours on it today/last night to get it to copy 13wpm from some 1976 ARRL code tapes flawlessly from my walkman into the microphone input of the SBPro. It does have a couple problems I can't iron out, but maybe someone else could.

Anyway, I'm sitting on the new source code until the author(s) contact me.

In article <1994Feb11.001239.2842@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary Coffman) writes:
>I can wait and recognize "the", but when it turns out to be the
>opening character group in "Thessalonian", I'm screwed. Dealing
>character by character on paper insures I get either correctly.

The way it works in my head seems to be that I have a longish mental FIFO with parallel access for pattern matching. The FIFO seems to run at about 5-10 letters, though access back to 10 letters requires me to think harder than for, say, 5. The length varies with speed too. Oh yes, and there are also algorithms for stuff missed in QRM: I am conscious of rescanning activity going on in my mind to try to `make sense' of whole chunks of partially copied code. This is mostly english grammer context guessing, but there is also a little bit of `that S could have been an H, but not a Q'.

The character-by-character loading of the FIFO is subconscious, I just `hear' the words, I guess as my brain picks out whole words from the FIFO. At high speed, near the limit of my ability, I hear whole phrases. I suspect this is why most operators I know have a small speed range (about 5wpm) just below their maximum, where they read code more comfortably than lower speeds. Of course, I use the FIFO as an analogy. Goodness knows what is really going on in my head. I'd have the same difficulty describing how I ride a bike.

The point I seek to make (long windedly) is that unless you put the pencil down Gary, you deny yourself the chance of developing this `look back and re-evaluate' ability, which is how I copy Thessalonian via "the", "these", "no, what the hell is this word?" and finally "Thessalonian", though I think most of us CW freaks would actually miss the word unless there were preceding context clues. But maybe I shouldn't admit that :-)

: Tony Germanotta, staff writer, The Virginian-Pilot, Norfolk, Va.
: -=-

Thanks to Tony and others who responded privately, who pointed out that this did
look amazingly like a phone number and that ip addresses fall within the range
of 0.0.0.0 to 255.255.255.255. I will advise the bosnians that this is NOT any
sort of ham address and that they might pick up a phone and try phoning either
the ham or their friends/relatives directly and persistently. Thanks again to
everyone who tried to help.

DX Bulletin 9 ARLD009
>From ARRL Headquarters
Newington CT February 10, 1994
To all radio amateurs

SB DX ARL ARLD009
ARLD009 DX news

The items in this week's bulletin are courtesy of Steve, W9NUF; the Northern Illinois DX Association; Ed, KB7E; and the Ohio/Penn and Yankee Clipper Contest Club PacketCluster networks. Thanks.

PETER FIRST ISLAND. 3Y0PI has been very active and should remain so until about February 19. DXers bemoaning the tough winter of 1994, check this out. Last Saturday 3Y0PI had to QRT
a storm that battered the team with 80 MPH winds and dumped five feet of snow on them. And this is during the Antarctic SUMMER/FALL.

Although some equipment was damaged, the team has made well over 20,000 Qs, more than 20 percent of their 100 Kilo-Q goal. Listen for them on CW, SSB, AmTOR, PacTOR and satellite. EME operations should commence soon. QSL CW via KA6V, SSB via AA6BB.

LACCADIVE ISLANDS. Geology students VU2STG and his newly licensed XYL are on an exploration and study assignment. During free time they operate VU7LI on SSB only. Please be patient as amateur radio is not the primary purpose for their visits to the Laccadives and equipment is minimal. QSL via VU2STG.

SOVEREIGN MILITARY ORDER OF MALTA. According to Luciano, I0JBL, the 1A0KM operation has been rescheduled for sometime in late February.

ANGOLA. D2EGH can be found on 14225 kHz at 2000z. QSL via CT1EGH. Listen for D2/AA4HU on 14225 kHz at 1745 and 2000z.

BANGLADESH. S21AM has been worked on 14185 kHz SSB at 1200z. QSL via Manju, PO Box 4000, Dhaka.

ETHIOPIA. ET3RA has been on 21250 kHz at 1600z. QSL via HB9CVB. ET3YU works CW on 14035 kHz between 1600 and 1700z.

ISRAEL. For the past two nights, Chicago area hams have worked 4X4NJ on 1832 at 0420z.

MAURITIUS. Jacky, 3B8CF, is a relatively easy catch on both 80 and 40 meters. Try 3506 kHz at 0200z and 7007 kHz at 0420z.

QATAR. A71BH can be worked on 14215 kHz around 1300z. QSL via OH6EEG.

FRENCH POLYNESIA. Walter, DJ0FX, is active as FO0PT from Moorea Island of the Windward Group, IOT
until February 19. Walter operates on all bands, mostly CW. Check the low end of 40 meters between 0730 and 1000z. QSL via the DARC Bureau.

SAN ANDREAS ISLAND. HK0/K1WGM has been worked on 160 meters around 1833 kHz at 0430z. Also check 80 meters on either 3505 or 3510 kHz between 0400 and 0600z. QSL K1WGM.

CAMBODIA. An operation by Laszio, HA0HW, is slated to begin in early April. The call signs XU9XA and XU0HW have been mentioned.

COSTA RICA. An operation is planned for February 17, 18 and 19 from Guanacaste Island, a new IOT
signs will be K5MK/TI7 and TI2WLE/TI7. Try 14260 and 21260 kHz for SSB, and 40 kHz up from the bottom edge for CW. QSL via K5MK.

THIS WEEKEND ON THE RADIO. Indoor sports this weekend include the North American Sprint, Phone; the EA RTT
QSO Party; and the YL OM Contest. For more information on these events, check pages 127 and 128 of January QST

1382. Hamblaster update

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 14:04:42 UTC
From: jwa@tellabs.com
Message-ID: <1994Feb11.140442.11801@tellab5.tellabs.com>
Source record: 271234

The Hamblaster Update

Over the past several months I posted updates about a
DSP "The Hamblaster" that Will Torgrim (N9PEA) and myself
are developing.

We are focusing our efforts on a packet modem that allows
the user to improve H.F. reception by interfacing the Ham-
blaster (a PC compatable DSP sound board) to a transceiver
and a packet or all mode TNC. Modems/filters for RTTY,
Packtor, Amtor are also under developement and are compatable
with the same control panal software.

Here are the latest developements
2-10-94

Several weeks ago I mentioned that the projected cost for
the board would be about $350.00. It was just a
"guessestmate". It looks like it will be more in the $275.00
range and could be as low as $250.00. This may still sound
high compared to the Soundblaster or other sound cards, but
you have to remember that it's made exclusivly for Ham Radio
and it won't have the volume (sales) of other sound cards.
I would also like to point out that it's not just software.
It's a sound card with a DSP and a digital port that can
interface to a TNC. The DSP is used as an improved filter
for Packet or RTTY and other digital modes. It unless there's
a way to interface it with Baycom, it cannot copy packet
without a TNC.

1) External Power supply

I think one feature that separates the Hamblaster
from other sound boards is it's ability to run on
an external 12 volt supply. When a filter or modem
is loaded, You can turn off the computer and
Hamblaster keeps on going and going and going!

When it's connected to a PK-232, there's no need
to keep the computer on in order to keep the DSP
alive. Right now, my PK232/Hamblaster is runing
and it's been operating for about 5 days

2) Adaptive (LMS) filter

There's ongoing developement in this area. We are
planing (I don't think this has been done before)

to add controls to the LMS algorithm.

3) Soundblaster compatibility

The Hamblaster IS NOT soundblaster compatible.
It was designed that way so that it will run
independant of other sound boards. I can still
use my Soundblater to record sound, play music,
load software from the CD or use the midi interface.
At the same time, I can receive packets or use
a DSP filter with my Ham equipment.

1384. soldering PL-259 to coax

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 15:06:15 UTC
From: phillips@eso.mc.xerox.COM
Message-ID: <9402111506.AA23765@zombi>
Source record: 271236

I saw a trick on this news group not long ago that seems to work well
for soldering PL-259's. Remove the two bolts and tip from a transformer-
type soldering gun and press the two tips -hard- against the PL-259.
Instead of the soldering tip carrying the current, the Pl-259 itself carries the
current and gets hot. The voltage is very low and you won't get shocked.

It heats very quickly when you hold a tight connection, and you're done before
the insulator has time to melt.

I am one of these hopeless creatures, who cannot raise the 40
marks per minute cw-cpy-speed to 60 which is the limit for the senior
class licens in our country. In the junior class we are allowed to phone
operations only on the 28 mHz band. As I am planning a longer yachting
voyage and I would like to be in contact with my fellow countrymen
through ham radio, it would be interesting to know if it is true that
you may buy for yourself a ham licens from Panama. How much would it
cost?

The Logikey keyer also is sold by the same company: Idiom Press. Last
I saw in an ad, the price for Logikey was $129 +s&H

BTW, Idiom Press is run by Bob Locher, W9KNI, top US operator in
the just released CW DXCC list. He is also the author of a book
on DXing and the author of the DXing chapter in ARRL Operating Guide.

He is an A1 operator.

>Is this an Iambic keyer or a regular keyer. I haven't used an iambic
>keyer (saw one once) but it seems like it'll take relearning.

It is an iambic keyer. Fairly full featured.

>Is it worth it?

I don't know since I have never used any others. I was attracted to
this keyer because it is available in kit form. I didn't want to
simply buy it.

The article describing the keyer is in QST and in recent issues
of the ARRL handbook. It describes an earlier version of the
software. The new version adds emulation of Accukeyer and Curtis "A"
etc. Memory dot and dash is now configurable. There are several
other enhancements as well.

The online manual is available for free from Idiom Press with
a formatted diskette and mailer. I know. I got it when I
bought the kit and converted it to Latex.

>AA7JF (503) 627-5067

Gosh Michael,
My cursive is so bad, *I* can't read it after I write it.
My lettering is guite good (many years of Mechanical Drawing experience)
and so I use lettering for all handwritten correspondence, and CW copy.
However I've had to adopt hybrid style to copy at 25 WPM (my current
threshold). As stated in an earlier thread, I've tried typewriters
with poor luck, as they are less easy to correct.
What I use is a lowercase cursive 'e' (looks like a squiggle) for "E"
a lowercase "t" with a long tail and no cross for a "the".
a "Plus sign" for "and"
I'd be interested to know what abbreviations others use for characters/words

: As I have stated before, and as even someone with a sixth-grade level of
: literacy ought to be able to glean from the above exchange, it was
: Mr. Hare who initially indicated that he was 'unsure' of his facts.

Huh? When did I suggest anything different? I'm not saying--and I
haven't said--that Ed didn't say that. I'm saying that what he said
was the truth.

: I responded that such a thing suprised me, having assumed that some
: survey would have been made and its results disseminated to the staffers.

A survey was made, but not everyone got a copy of the results, only
those who were working directly with the data.

: Since the issue in question was one of being in or out of touch with
: the ham population at large, this was very pertinent.

: He apparently mis-represented that; he indeed does believe that he has
: facts at hand.

How you come to that conclusion escapes me. He did not have the data at hand, so he didn't pretend that he did have it. Nor did he say, "No information exists about this at ARRL HQ." He said, "I am not sure." He misrepresented nothing; you're simply inferring something that isn't so. The fact that the data exists here (and that I have a copy) doesn't logically lead to the conclusion that Ed had the data, and particularly not that Ed knew what the data said and was lying about it. The statement, "I'm not sure" means just what it says. In this case, it means that Ed didn't have the data and didn't search it out.

: > But I *do* have the data at hand. Our recent (1992) market survey
: >shows that 35% of amateurs "enjoy building equipment or kits." 42%
: >enjoy "experimenting with equipment or antennas." So the statement that
: >few ever build circuits is clearly unsupportable.
: > Now, where's *your* data?

: I guess I consider almost 20 years as an active ham a pretty good basis
: for what my fellows do and don't do.

Anectodal evidence is notoriously inaccurate. When nothing else is available, you use it. But when you have statistical or measured data, you use that; it's far more reliable.

: But let's look at these "facts" with a critical eye, shall we?

: 1. 35% is not exactly a clear majority, now is it?

Who said anything about a majority? The operative phrase here (your phrase) is "few ever build." Now, what number divides "few" from "not few" is a matter on which reasonable prople can disagree. I think 35% is clearly "not few." Perhaps you disagree. But consider this: if we are to cover in QST only those activities which a majority of amateurs "enjoy," according to our survey the coverage would be limited to: talking with friends, mobile or portable operating, and listening. (Although hamfests and repeater operation do check in at 49%, which is within the margin of error of a majority.) Frankly, I would consider that a pretty limited QST. So, I don't accept that a majority is necessary in order to justify QST coverage; only a substantial interest is needed.

: 2. The 42% includes 'or antennas.' Considering that
: antennas are generally NOT plug-and-play items,
: I'd expect MOST hams have to do it. Does this
: mean the other 58% hate it?

It probably means the other 58% comprises some people who hate it and some who are indifferent.

: 3. The phrasing of the question begs for a higher
: number. They 'enjoy' it. I 'enjoy' sunning on
: the beach on a tropical isle. Doesn't mean I

: do it, or get to do it, very often. But I would

Presumably you can't enjoy it unless you do it. Would you have preferred we ask "do you do" rather than "do you enjoy?" I mean, we'd get a whopping response to "do you put connectors onto coax cables," but that doesn't mean very many enjoy it, or that it's the reason they like ham radio. What we were tring to get at in the survey is, what do people like to do in ham radio. And that, in my opinion, is one of the key questions that should drive the make-up of QST.

: submit that there are some vested interests in
: asking the question that way. Such as the advertising
: dollar. And such as justifying the existance of QEX.

You'll have to explain the vested interest to me; I sure don't get it. If dollars were the only measure, we'd fill the magazine with nontechnical material--it's a whole lot cheaper to produce. As for QEX, we lose money on that. So the "vested interest" would seem to be to show that there's no need for technical material so we can drop it.

: 4. The very existence of QEX can be taken to mean two
: things; there is sufficient interest to support a
: whole distinct publication; or there is insufficient
: interest to put the material into the mainstream.

Ah, but QEX is not about buildable projects (although it does contain a few). It's about advanced technical work. It doesn't relate to the discussion here, which is about publishing buildable circuits.

: And that it really doesn't support conclusions any more than the average
: Joe Ham's experience. Of course, Joe Ham spends his money based on his
: experience, more than Mr. Bloom's data. And it is also that experience
: which leads him to stay in the hobby rather than take up snowmobiling.

The point here is that the data is a measure of that experience. My personal experience, your personal experience, Ed's persoanl experience; they are *not* "average Joe Ham's experience" because no individual is average, with 0.7 spouses and 2.3 kids. You need to look at a lot of experiences to develop an average, and that's one of the things the survey technique does. (It also identifies where the average is not a useful measure, and where there are significant departures from "average.")

: >: >Some of the authors that have offered a kit have reported
: >: >large sales
: >
: >: And god bless 'em if they do, for they are the ones who recognize
: >: that parts procurement is 90% of the problem and 200% of the
: >: expense of home-brewing. Someone who take the time to write an article,
: >: and then offer a kit, with no intention of profiting by either is,
: >: IMHO, entitled to some sort of sainthood.
: >
: >But, according to you, QST shouldn't publish such articles. Isn't that

: >just a bit, well, inconsistent?

: Yes, and that should have been your first hint that you were, well,
: not correct in your interpretation of my position. Perhaps if you
: took the time to read and understand, you might gain insight
: outside of the boundaries of greater Newington.

Ad hominem attacks impress me not in the least.

: >: >something else. Go to any hamfest, note the rows upon rows of
: >: >vendors offering components. Hams are buying them, putting them
: >: >in bags and taking them home. They must be doing something with
: >: >the parts.
: >
: >: In my experience, they're gathering bits for something they'll
: >: 'get around to someday,' and or looking for a specific component
: >: for some simple use.
: >
: >So, hams are hoarding basements full of parts without ever using any of
: >them? *That's* your experience? Wierd!

: Aw c'mon. You mean to say you don't know bunches of hams with garages/
: basements full of stuff that they're going to assemble when they get
: 'a round tuit' along with some half-finished projects, and most of
: the parts for this or that? Where have you been?

Yes, I *do* know bunches of hams with bulging garages and basements
(and attics, too). But the reason they haven't gotten to those projects
is because they are building *other* things. And they are exactly the
people who build stuff from QST. They just don't have time to build as
much as they'd like!

: >Well, I did an informal poll of the technical editors and lab staff
: >here at HQ. Of the 10 people I talked to, one (count 'em) received his
: >license after the age of 20. So we've *all* had experience outside the
: >environment of ARRL HQ. We weren't born here in the ARRL Lab, you know!
: >And only a few of these people have EE degrees. (Just enought to keep
: >the other ones on the straight and narrow!) So, once again, the
: >available evidence shows your "assertion" to be in error.

: 'Had experience' and where you work every day are two different things.
: You get used to things. After five or more years, for example, it would
: seem strange for me to work somewhere that had no internet access, even
: though I know most people don't have it, and can remember what it was
: like when it was a challenge to move data to a system four miles away.
: That's normal. It really doesn't hurt anything, unless you *forget*
: that you're in a different situation from most people, and fail to
: accept that you have to do some different things to allow for it.

You mean, like take a survey to find out what people think, instead of
relying on our personal experience?

In any case, I don't think the situation is all that different. Most of the people here at HQ who build stuff (which is not everyone, by any stretch--on a guess, it's probably somewhere around that 35% number) do it the same way as everyone else: they buy the circuit board and parts kit from FAR Circuits or wherever. Those few of us who make use of the test equipment in the lab made use of the test equipment in our previous workplaces, too. (I can remember many Saturdays of working on ham equipment at work before I ever came to work here.) So the experience of people here at HQ is not dramatically different from that of "average Joe Ham," despite what you may think.

[deleted]

: >: way, the League and QST have flirted with this policy from time to
: >: time, but they can't seem to get away from the 'all home-built' ideal.
: >
: > Do you *read* QST? Have you seen the "New Ham Companion" section? I
: >challenge you to find *one place* in the ARRL literature where it says
: >a new ham should homebrew his station in order to get on the air. Just
: >one place.

: It was all over the older League publications.

: Perhaps, if I have some time, I'll look up some citations.

Do so, please.

: Perhaps, Jon, you can fill us in on when the League and the editorial
: staff thereof, conciously chose to change to a editorial policy where
: home-brew was presented as an ancillary activity, rather than as an
: ideal?

Well, in the 10 years I've worked here, I've never felt that homebrew was being held up as an ideal. I can't speak for the situation before that.

: >full-page ads in *other* magazines. (Hey, maybe that's it... maybe all
: >your complaints are really about another magazine, and you've just
: >confused it with QST! At least that would explain why all of your
: >"assertions" are 180 degrees out.)

: Gee, wouldn't it be useful if we had an ARRL staff which, instead of
: attacking *MEMBERS* whose perceptions disturb them, claiming that
: 'all of your "assertions" are 180 degrees out' took the time to
: figure out what's wrong? Why do some people look at the ARRL this
: way? Why aren't a mojority of the hams members? Why do memberships
: lapse?

I'm not attacking you, Greg. I'm attacking your conclusions. There's a big difference.

: >: More correctly stated: 'by what the Directors want hams (particularly
: >: new hams) to see.'
: >
: >Really? On what basis do you supply this correction? Facts, please,

: >because all the information *I* have (from sitting in the editorial
: >review meeting every week) shows that what the editors discuss is what
: >we think the *members* want to read. And on the rare occasions I've
: >heard a Director comment on the content of QST, it's invariably been to
: >relay a *member* complaint or concern.

: I guess that means that the content is pretty well in tune with the
: Directors' desires, then. Again, I base this on the facts that:

: 1. QST is an official journal
: 2. QST seems to be as good at covering opinions which
: dissent from the League line as the National Review
: is at covering liberal politics; conversely, the
: League's positions are about as well covered in
: QST as conservatives are in the National Review.
: I rarely see something in QST which would help
: a member make up his mind on an issue.

: Perhaps it should be that way. I know I'd rather see it that way,
: and see it honestly admitted, than see it denied.

As I said in an earlier posting (not the one you quoted), there is a
difference between technical material (which is the subject--at least
the original subject--of this thread) and nontechnical material. Sure,
QST presents the Board's views about issues facing Amateur Radio. But
that doesn't influence the selection of technical material. Not that
I've ever seen, anyway.

: >: And good it was. QST Product Reviews are the ONLY ones I would ever
: >: trust. Mostly because I've seen gushing, press-release quality *articles*
: >: in 73 and CQ, masquerading as product reviews. It only begs the question
: >: of why, when this landmark kit has been on the market for several years
: >: already, it was just recently the subject of a review in QST. Lots of
: >: stuff of much lesser interest has appeared before this one. I mean,
: >
: >Uh, lesser interest to who? Got any support for that, Greg?

: The first thing that springs to mind was the review of the SWL receiver
: which was in the PR section a couple months back. Did it really deserve
: a full-blown review? It was a piece of equipment of only secondary (and
: to give due credit, by the time the review was perused, I understood
: it to be more like 'teriary') interest to hams. The question is, was
: a full review necessary to establish that?

But how do you *know* it's secondary? That's my question. If you're
saying it's of secondary interest to you, fine. Buit if you're saying
it's of secondary interest to hamdom at large, I'd like to have that
based on something more than one man's opinion. Our selection of items
for "Product Review" treatment is based largely on what we've heard
from our members--what they like and don't like. (And they aren't shy
about telling us, fortunately.)

: >: I bought one of the close-outs of the first Ramsay 146 kits on sale
: >: a good two years ago! Haven't got around to assembling it yet, but
: >: I wish I'd known what to watch for before plunking even the bargain-basement
: >: price on the counter.
: >
: > Since you ask...we originally bought one of the Ramsey units in the
: >summer of 1991.

: ...that would have been a good time.

: > This was the earlier version (the FTR-146). We built
: >it and were in the process of reviewing it when we received a call
: >(unsolicited) from one of the folks at Ramsey, saying that they had
: >noticed we bought one and thought we'd be interested in knowing that
: >they were about to release a new design, and perhaps we would want to
: >hold off our review of what was about to become an obsolete unit. (At
: >the same time, I reported to Ramsey that the radio failed to meet
: >harmonic spectral purity requirements.) They promised to send us one of
: >the new units as soon as it became available. (Normally, we only
: >*purchase* Product Review items, but we decided that it would be hard
: >for them to fine-tune a kit :-)
: > We waited a couple of months, then called Ramsey. To make a long
: >story short, we called *every* couple of months, but we never received
: >the promised radio. Finally, we just bought one (through a third
: >party). This is the unit we reviewed. In March of 1993, we contacted
: >Ramsey to report that the radio we built didn't meet FCC specs. They
: >offered to send us one of their built radios, so we could check it
: >against ours. We did so, and found that *their* radio didn't meet
: >specs. In fact, it worked just like the one we built. We reported
: >that to them and asked that they provide a fix to the spectral purity
: >problems. They did so, and we implemented the fixes (as described in
: >the review article).
: > This entire process took just about two years, the bulk of which was
: >our waiting for Ramsey to deliver a promised radio--that we never got.

: This is interesting information indeed! Certainly, there is some 'fault'
: with Ramsey. It may even be that they knew what the likely results would
: be. We'll never know.

Nope, we won't.

: However, the option to purchase existed all along. And, it seems to me,
: that:
: 1. There was *some* responsibility to somehow inform the
: readership of the problems seen with the first kit. After
: all, these kits are probably one of the most appealing
: items, especially to new hams, on the market today. QST
: was very accomodating to Ramsey. Would that they would hve
: been so to us! Again, this goes to an issue of being 'in
: touch' with what hams need.

: 2. It is quite possible to 'tune' a kit. You can make sure that
: all the components are within design tolerances, you can

: take a very careful parts inventory, you can look at the
: PC board with a very good magnifier, and you can generally
: make sure that it's in the highest percentile of what you
: turn out.

Possible, yes, but not that easy. Since we ended up not getting a kit donated from them, the point is moot. But I'll add that I have seen kits donated for Product Review (from other manufacturers) that were missing parts. But, yeah, that seemed odd to me, too!

: I wish, and I suspect some others do, that QST had pushed harder on this
: one, and been more out front with those of us that pay the bills. Especially
: when, as in this case, the initial work pointed to the possibility of a
: serious problem.

Well, only somewhat serious. The initial design had only harmonic spectral problems, not the close-in spurs of the second unit. And the fix for that was addition of one capacitor, or an external filter. There's no doubt, though, that if we had it to do over again, we'd do it differently--faster, that is. Live and learn.

: It's a much higher calling to point out problems for the ham-consumer,
: than it is to review the Conglomerate 1001D 8-band transceiver with
: DSP; of course the 1001D is a more fun toy to play with, but 95%
: of the time it works pretty much as advertised (across three color
: pages of QST, I might point out).

Not always. Read the reviews and note the problems we identify with the units we review. Some of the high-priced units have been shown to be deficient in one way or another. And, too, the risk factor is higher on a $2000 transceiver than on a $150 kit. If you had to buy one of the two "blind," without the availability of a review, would you rather it be the $2000 unit, or the $150 one?

: What it comes down to is, you guys knew, or at least had an inkling,
: that there might have been a problem. And you didn't tell us! I guess
: I'd expect that either you'd find a way to tell us, or push to get
: the Review done, to settle the matter.

On this issue, I agree with you. We should have done--I should have done--a better job. Having never before gone though an experience like the one I described, I fumbled the ball somewhat. So, if you want to heap vituperation on anyone, I'm the guy. But one mistake does not a philosophy make. Extrapolating this error to the conclusion that we don't care, or that we are out of touch just isn't warranted.

: And *THAT* is the kind of thing that I'm talking about when I claim
: that there is a divergence between what the ham radio population needs
: from the League's publications, and what they get.

Well, our occasional errors aside (we *are* human, whatever you may think), our research, and our member feedback, show that we *are* giving people much of what they want. Not everyone gets everything

they want, that's for sure. But overall, we're getting the information people want to them. And the publications evolve to match the evolving interests of our members. We're always interested in hearing opinions as to what we could do better. But statements of opinion presented as fact--based on one person's experiences, be they of 20 years standing or 50 years standing--aren't going to carry as much weight as good opinion research data. That is particularly the case when those opinions run counter to the weight of other opinions we hear from members. That's the bottom line to this discussion.

If all else fails, read the directions.

I found the directions in the ARRL handbook to be excellent.

>Cheers de Sandy WA6BXH/7J1ABV
>

The QRP mailing list has changed in the way that it is administered.
Please read the following that was posted to QRP this week:

Subject: QRP List now under Majordomo

All administrative requests should now be sent to "Majordomo@Think.COM";
mail sent to the QRP-Request address will cause an automatic reply from
Majordomo telling you what you should do.

If you want to unsubscribe from this list, send a message to the majordomo
address above containing only the line:

unsubscribe qrp

If you want to get the QRP-Digest list (still considered highly
experimental!) instead of the QRP list, send a message containing these two
commands:

unsubscribe qrp
subscribe qrp-digest

More info on things you can do with/to majordomo can be had by sending the
command:

help

Eventually, I will move the files which are in the QRP anonymous FTP area
into an area where they can be automaticaly retrieved by majordomo; as yet,
you'll find nothing with "index qrp".

If you still have questions or comments that require a human, send to
QRP-Admin@Think.COM, and someone will (eventually) get back to you.

73,

You will be much better off by using 30m for followin reasons.

40 is segmentaized e.m. different ITU zones can operate only on certain
freq. or segments of the 40m band.
40 has Broadcasts and other QRM working against QRP.
On 40 "other" station can use 1KW so ham to ham QRM is a factor.

30 is 'NEW' and same freq. for all ITU.
Very little QRM
On the edge of muf
Max power is 100w
Beam fix or rotatebl is feasable and in my opinion a must for QRP.

Try it you may like it!!!!!

Every once in a while I hear on 146.8500 mhz (A repeater in
Derry, NH) some operators doing CW practice, as if in a classroom
environment.

This sounds extremely interesting to me, since I'm having a little
problem trying to get CW down pat...

Does anyone know anything about this, and if so, is this done on
a daily/weekly/monthly basis? Is there some sort of schedule?
I also think I heard them giving ARRL news also one night...?

They do have a slow-speed CW net on this repeater, I believe weekly.
It is primarily aimed at no-code techs looking to upgrade (since they
can transmit and receive on this band), but of course it can help the
listener improve copying proficiency as well. As I said, I believe
it's weekly, so keep an ear out about the same time - you may also
hear someone at other times announcing the net or describing it to
another repeater user.

Good luck on your tests and come to a Nashua Area Radio Club meeting
<<ad alert>> (all invited, first Monday each month at 7pm in the
Nashua Public Library)

1399. rsgb gb2rs news 13th feb

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 18:03:42 UTC
From: ted@tedb.demon.co.uk
Message-ID: <760989822snz@tedb.demon.co.uk>
Source record: 271250
Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur

Good morning. It's Sunday the 13th of February and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- The VHF Convention and Thinking Day on the Air are both held next weekend; and more auroras are forecast for this week.

Next Sunday sees the premier event in the VHF Calendar, the RSGB VHF Convention, held at its usual venue, Sandown Race Course, Esher, Surrey. Doors will open at 10.30am and the convention features a trade exhibition and a lecture programme featuring VHF, UHF and Microwaves, starting at 2.15pm. The February edition of Radio Communication carries full details of the event including a list of lectures. Refreshments will be available from 11.00am and talk-in will be on channels S22 and SU22 by GB2VHF. Further information can be obtained from Geoff, G3FZL on 081 699 6940. Also next Sunday is the Trafford rally in Manchester. More details of this later in our bulletin.

Thinking Day on the Air takes place next weekend the 19th and 20th of February. Guides and Brownies all over the world will be communicating with each other via amateur radio stations and as usual many governments have relaxed their third party message restrictions for this event.

The Society has had enquiries about what to do if something goes wrong when applying for, or renewing, their licence. Subscription Services Limited work as agents of the Radiocommunications Agency, so it is to the RA that the complaints must be addressed. To assist the RA in looking at your query, it is important that all communication with SSL is by letter, not by telephone, and that copies are kept of all correspondence.

The Scarborough Amateur Radio Society at its Annual Dinner this month presented Jim Lynch, G0NXX, with the Fred Powel Trophy for working the greatest number of DXCC countries in the previous 12 months. Jim's score was 225 countries, all on CW using 80 watts to a Ground Plane antenna.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO. From American Samoa, G4ZVJ will sign AH8F from Tutuila Island from the 16th of February for a month, mainly on CW. From Belize, many American operators will be active on all bands/modes from the 16th, until the 23rd of February, using individual V31 calls. For the ARRL CW Contest they will use the callsign V31WW. From Revilla Gigedo, XE1BEF and many others will sign XF0C from Clarion Island from Friday the 18th of February for two weeks. Activity will be on all bands 6 - 160 metres on CW, SSB and RTTY. And from Jamaica, K6JAH will sign 6Y5/K6JAH from Sunday the 20th of February for two weeks. Activity will be on 10 - 40 metres SSB only.

{Newsreaders: These events, the Welsh Mobile Rally, the Cambridge & DARC Radio & Computer Rally and the Northern Cross Rally can be deleted if your broadcast does not cover the local area for any or all of these Rallies}

Rally news now and we know of the following event(s) for today, Sunday the 13th of February:

The Welsh (Barry) Mobile Rally is being held at the Barry Leisure Centre, off Holton Road, Barry. Doors open at 10am, or 9.30 for disabled visitors. The event features trade stands and a bring and buy stall. Refreshments are available and talk-in is on 2 metres channel S22.

The Cambridge & District Amateur Radio Club Radio Electronic and Computer Rally is being held at Addenbrookes Hospital Ambulance Station, Cambridge. The site has easy access from the M11, junction 11 and the A45 via the Ring road. Doors open at 10.30am. The event features trade stands and a bring and buy stall. Refreshments will be available and talk-in will be on channel S22.

The Northern Cross Rally is being held at the Rodillian School on the A61 road between Leeds and Wakefield, near the junction of the M1 and M62 motorways. Doors open at 11am, or 10.30 for disabled visitors and for bring and buy vendors. There are over 60 trade and group stands and a bring and buy stall. The RSGB Propagation Studies Committee and the RSGB Planning Advisory Committee will be represented. The Wakefield and District Radio Society is showing some new Morse test practice aids and RSGB books. Morse Tests are available on demand, but please remember to bring two passport size photographs. Refreshments are available and talk-in is on channel S22 and via the repeater GB3WU.

There is only one Mobile Rally next weekend:

On Sunday the 20th of February, the Trafford Rally will be held at the G-MEX Centre, Manchester. Doors open at 10.30am for all but there is a disabled persons priority queue. This event features all the usual trade stands and many other attractions, including an RSGB book and information stand. Refreshments will be available and talk-in will be on channel S22 via GB1GMX. Further details can be obtained from G1IJK on 061 748 9804.

Next some dates for your diary:

The 1994 RSGB London Amateur Radio and Computer Show is to be held during Saturday the 12th and Sunday the 13th of March, at the Lee Valley Leisure Centre, Picketts Lock Lane, Edmonton, North London. February's RadCom contains details of the Show which is being run by RadioSport Ltd, in conjunction with the RSGB and the Southgate Amateur Radio Club. A Show Guide is being published as a supplement to the March edition of RadCom which is due to be posted in about ten day's time. There will be no RSGB National Convention this year so the Society will put on a larger stand at the London Show. For further information call 0923 893929.

HF contest news now:

The ARRL International CW DX Contest takes place next weekend from 0000 UTC on Saturday the 19th, to 2400 UTC on Sunday the 20th of February. Contestants may

use all bands from 1.8MHz to 28MHz, but excluding the WARC bands. See February RadCom page 19 for rules and entry details but please disregard the dates which are incorrect. To recap, the correct dates are the 19th and 20th of February.

Next some VHF contest news:

First the result of the RSGB 144MHz AFS, Fixed and Listeners Contest held in December 1993. In the Multi Operator Section the winner was GD4IOM with 4,177 points, with G4ANT second with 4,112 points. In the Single Operator section the winner was G4PIQ with 9,950 points, with G4WFR as runner up with 3,944 points. The leading Affiliated Society was the Martlesham DX and Contest Group which came first with a score of 13,921 points. The Spalding and District Amateur Radio Society was runner-up with 8,081 points. The full results will be published in RadCom as soon as possible. The next sessions of the RSGB 70MHz Cumulative Contest take place today, Sunday the 13th and again Sunday the 27th of February, both from 1000 to 1200 UTC. There are three sections:- Fixed station single operator, Open and Listeners. See December's RadCom page 83 for details.

GX3CHM/P will aired from East Pennard, Somerset, during Sunday the 20th of February. It will be operated by members of the Yeovil Amateur Radio Club who will be commemorating the 40th anniversary of first sky-wave contact using a transistor transmitter. GX3CMH/P will operate on 3.560MHz CW using an equivalent QRPP transmitter to that used in the first tests. For further details contact G4JBL on 0258 473845. RSGB members may like to note that a feature on this historic event appeared in the February RadCom. The West Bromwich Central Radio Club wishes to thank all participants in January's County Air Ambulance Appeal for the very kind sentiments expressed. There was a refreshingly high level of activity, particularly on 2 metres. The County Air Ambulance award certificate is available to stations who worked four or more of the County Air Ambulance special event stations. The Award Manager is Geoff, G0KNM whose address is correct in the RSGB Call Book. For further information contact the Club Secretary Ian, G0PAI on 021 561 2884.

And now the solar factual data:

The period from the 31st of January to the 6th of February saw the quiet side of the sun looking our way. Based on past history little was expected to happen, and indeed little happened up to the 3rd when to everyone's surprise a major magnetic storm occurred at high latitudes. This was due to a coronal hole that suddenly developed from the sun's southern hemisphere. As this swept across the earth, major magnetic storms developed at high latitudes, and extended to mid latitudes as well. No flares were associated with this disturbance. The HF bands were very severely affected and had not recovered when this bulletin was being prepared. MUFs were down to around 15MHz and that was for continental short wave broadcasters. No long distance broadcasters could be heard. Auroras were reported on the 5th and 6th, both on 6 and 2 metres, with further storms being forecast. Sunspot indices declined as expected and meaned at about 46. Solar flux levels hardly changed day to day and averaged 95 units. The 90 day mean on the 5th was 106 units. The geomagnetic Ap index was quiet up to the 3rd with levels around 8 units; on

the 4th it became unsettled with levels up to 19 units with a storm developing at high latitudes. Levels increased to 33 units on the 5th when a major storm at high latitudes began at 10.30, which increased to an Ap of 60 by the 6th. The period averaged an Ap of 21.4 units. The coronal hole passage was expected to take 5 or 6 days so warnings of further storms were kept in force. The auroras built up to an excellent one on the afternoon of the 6th, with continental contacts on 6 meters being plentiful with powers of only 3 watts. The aa indices, as supplied by the British Geological Survey for the 25th to the 31st January, gave daily averages of 25.7 nanoTeslas. This is about K3, just unsettled. The 25th was the quietest day, down to 10.4 nanoTeslas or K2. The X-Ray flux declined considerably and averaged A9.7 with the 5th being down to only A8.0 units. The sunspot means for January were RI 58.8 with a maximum of 104 on the 5th and a minimum of 25 on the 17th. The 6 month smoothed spots for July are 54.6 +/-5.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers as reported by Meudon averaged 7.9MHz but with the magnetic storm the daily highs dropped to only 5.0MHz on the 6th. The darkness hour lows also declined and averaged 2.8MHz; there was blanketing E and spread F lasting up to 6 hours on some days.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg have varied from 8.7MHz on the 1st down to 2.9MHz on the 5th with the period averaging 5.7MHz. The darkness hour lows averaged 2.4MHz but was down to only 1.8MHz on the 6th. Flares are listed in energy levels and GB2RS gives only the higher ones, the M and the X. These are followed by a number depending on the energy level, and the optical brightness, which is F (faint), N (normal) or B (bright), followed by a number or letter S which means sub, or less than. So SN means sub normal or N1 is more than normal.

And lastly the solar forecast:

This week, the more active side of the sun will be coming into view. Solar flux levels are expected to rise to about the 110s. Based on past history the geomagnetic activity is expected to be just unsettled. Daylight MUFs are expected to reach 24MHz, possibly slightly higher on north/south paths. Darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 U L and G7 R P series, and Novice calls in the 2 0 A H and 2 1 C P series. .

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

Next, the local news.

NEWS FOR THE SOUTH EAST

Meetings for Tuesday the 15th of February:

Acton, Brentford and Chiswick Radio Club has a talk entitled 'Kit Building for Beginners'. More details from G0JRY, tel: 081 749 9972

Bromley and District Amateur Radio Society has a talk on 'RAYNET' by Phil, G6AQP. For further details contact Alan, G0TLK on 081 777 0420.

Dacorum Amateur Radio and Transmitting Society has a talk entitled 'Amateur Radio, an Old Man Needing the Kiss of Life?'. For details contact Nick on 0582 766973.

Maidenhead and District Amateur Radio Club has a talk on 'Space, the Risk Business' by Geoff Hall. For more details contact Neil, G0SVN on 0628 25952.

Stevenage and District Amateur Radio Society has a Video evening. Details from Neil, 2E1ASZ, tel: 0438 350882.

Meetings for Wednesday the 16th of February:

Aylesbury Vale Radio Society has a talk by Richard Biltcliffe. For further details contact Martyn, G4XZJ, on 0296 81097.

Brighton and District Amateur Radio Society has a talk entitled 'Video Recorders - Operation, Faults and Repair' by Eddie, G3ECW, at 8pm. A good attendance is requested please. Further details from Harold, G3WR, tel: 0273 501100.

Chesham and District Amateur Radio Society has a Construction evening - 'Wire Aerials' with G8AHS. Details from Ian, G0RTF on 0494 676391.

Hastings Electronics and Radio Club has a talk on 'Security Alarms' by Peter, G0FVV. Further details from Stan, G4ITM on 0424 430579.

Three Counties Amateur Radio Club has a talk entitled 'The History of Dunsfold Aerodrome from its Beginning in 1940 to the Present Day' by Paul McCue. Further details from Tom, tel: 0428 606298.

Worthing and District Amateur Radio Club has a talk on 'Phase Look Loops' by G0SWH. For further details contact G4GPX on 0903 753893.

Meetings for Thursday the 17th of February:

Cray Valley Radio Society has a talk entitled 'Penguin Night! - VP8SSI' by Bob Treacher. Contact Bob on 081 850 1386 for details.

East Kent Radio Society has a short talk on 'How I became a Radio Amateur' by George, G4AOE. Further information from Paul, G3VJF on 0227 364606.

Hoddesdon Radio Club has a Visit by Waters & Stanton Electronics. All are welcome to attend. Details from Roy, G4UNL, tel: 081 804 5643.

Shefford and District Amateur Radio Society has a Members' Activity night. Contact Paul, G1GSN on 0462 700618 for further details.

Sutton and Cheam Radio Society has a Constructional Contest. For details contact John, G0BWV, tel: 081 644 9945.

Vange Amateur Radio Society has a talk entitled 'Home Brew - Hints and Tips'. Contact Doris on 0268 552606 for further information.

Meetings for Friday the 18th of February:

Hilderstone Amateur Radio Society has a Construction evening - 'High Pass Filter'. For further details, telephone 0843 869812.

Loughton and District ARS has a talk on 'Meccano - its History and Present Popularity' by Alan Curtis. Details from John, G8DZH on 081 508 3434.

Silverthorn Radio Club has a preparation evening for 'Thinking Day on the Air'. Details from G0LWS on 081 529 4489.

West Kent Amateur Radio Society has a Video night, with some of the latest videos from the RSGB. For further details contact G3OHV, tel: 0892 664960.

Winchester Amateur Radio Club has a talk on 'Radio Interaction between Radio Astronomers and Radio Amateurs' by Alan Dowdell. Further details from John, G4AXO, tel: 0962 860807.

Meeting for Saturday the 19th of February:

Crystal Palace and District Radio Club meets for its AGM and Construction Contest. For further details contact Wilf, G3DSC on 081 699 5732.

NEWS FOR SOUTH WEST

Exeter Amateur Radio Society Club has a new venue and now meets in The Moose International Centre, Blackboy Road, Exeter. For details contact Ray, G3YBK 0392 78710.

Meetings for Wednesday the 16th of February:

South Bristol Amateur Radio Club has a Demonstration of Practical Morse. For more information telephone 0275 834282.

Trowbridge and District Amateur Radio Club has an 'Open evening'. For further details contact Ian, G0GRI on 0225 864698 (evenings).

Meeting for Thursday the 17th of February:

Yeovil Amateur Radio Club has a talk and demonstration on 'The Clubs Original Semi-Conductor Transmitter' by G3MYM. Contact Cedric, G4JBL on 0258 473845 for further information.

Meetings for Friday the 18th of February:

North Bristol Amateur Club has a talk entitled 'Transistor Applications'. More details from Tony, G4ROX tel: 0272 513573.

Saltash and District Amateur Radio Club has a 'Demonstration and Operation of the Club's HF Rig'. Details from Brian Giles, tel: 0752 844321.

Shirehampton Amateur Radio Club is closed for half-term. The next meeting is on the 4th of March. For further details contact Ron, G4GTD on 0272 770504.

Taunton and District Amateur Radio Club has a talk 'The Development of the Air-to-Air Guided Missile' by Doug, G5JJ. Contact G3WNI on 0823 680778 for details.

Torbay Amateur Radio Society has its Annual General Meeting. Further details from Walt, G3HTX on 0803 526762.

NEWS FOR EAST ANGLIA

Meetings for Wednesday the 16th of February:

Ipswich Radio Club has a talk entitled 'Antennas' by Frank, G3FIJ. Further details from Sheila, G8HYE, tel: 0473 742072.

Norfolk Amateur Radio Club has a talk on 'Science for All' by Arnold, G3PTB. For further details contact Sheila, G0KWP on 0603 618810.

Meeting for Friday the 18th of February:

Cambridge and District Amateur Radio Club has a talk by Dr Peter Andrews of the Royal Greenwich Observatory. Visitors are welcomed to attend. The meeting starts at 8pm. For further details contact John, G0TIL on 0763 243570.

NEWS FOR THE MIDLANDS

Meetings for Monday the 14th of February:

Radio Society of Bloxwich has a Competition night - Design a Society Logo, QSL Card and Poster. Details from Rob, G0MLY on 0922 683877.

Mansfield Amateur Radio Society has a talk entitled 'Are We Being Conned - part 3.' by Charles, G4ZZG. For further information contact Mary, G0NZA on 0623 755288.

Stratford upon Avon and District Radio Society has a Test Equipment evening - with preferential treatment given to homebrew or converted equipment. Further details from Clive, G0CHO on 0789 450623.

Meeting for Tuesday the 15th of February:

Grantham Radio Club has a talk on 'Overcoming EMC Problems' by G4OUB. Further details from John, G8WWJ, 0476 65743.

Meetings for Wednesday 16th of February:

Derby and District Amateur Radio Society has a talk on 'The History of the Motor Tyre' by Brian, G4SXE of the Pirelli Company. Further details from Hayley, G7PXA on 0773 856904.

Telford and District Amateur Radio Society has a talk entitled 'Connectors Revisited' by Brian, G6UDX. For further details contact Dave, G4EIX, on 0952 588878.

Meetings for Thursday the 17th of February:

Amateur Radio Club of Nottingham has a Surplus Equipment Sale, with Dave, G3YUT as auctioneer. Further details from Simon, G0IEG on 0602 501733.

Solihull Amateur Radio Society has a talk entitled 'A Brief Guide to Re-chargeable Batteries' by Collin, G3USA. Details from Paul, G8AYY on 021 783 2996.

Meeting for Sunday the 20th of February:

Charnwood Amateur Radio Contest Club has a Contest Planning session. For further details telephone 0509 232927.

NEWS FOR THE NORTH OF ENGLAND

Meetings for Monday the 14th of February:

Sheffield Amateur Radio Club has a talk and demonstration of the club's Packet Station. Details from David, G0JJR tel:0742 446282.

Scarborough Amateur Radio Society meets for its Annual General Meeting at 7.30pm at Scarborough Cricket Club. Further details from Ross, G4ZNZ, tel: 0723 514767.

Thornton Cleveleys Amateur Radio Society has a Construction and Fix-it evening. Further details from G4BFH who is QTHR.

Meetings for Tuesday the 15th of February:

Chester and District Amateur Radio Society has a talk on 'Radio Waves in Medicine, High Resonance Scanning. Further details from G0OXA, tel: 051 608 3229.

Halifax and District Amateur Radio Society has a Junk Sale at the club's new venue at West End Hotel, West End, Halifax. Contact David, G0DLM on 0422 202306 for further details.

Liverpool and District Amateur Radio Society has a Debate - 'The Place of the Computer in Amateur Radio'. Further details from Ian, G4WWX QTHR.

Wakefield and District Radio Society meets for a Tally Inquest evening. Further details from Roy, G0TBY on 0924 893321.

Meetings for Wednesday the 16th of February:

Denby Dale and District Amateur Radio Society has its Preliminary Rally meeting at 8.30pm. Details from Ivan, G0SBR on 0484 532371.

Hornsea Amateur Radio Club has a lecture on 'Phasors'. Details from G4YTV, QTHR.

North Wakefield Radio Club has a visit to the Wakefield Police Control Centre. For further details contact John, G4RCG on 0924 362144.

Wirral Amateur Radio Society has a visit by Keith Brooks, G0SPH the RSGB's RLO for Merseyside. Details from G3FOO, tel: 051 644 6094.

Meetings for Thursday the 17th of February:

Spen Valley Amateur Radio Society has a talk on 'Decorative Paint Finishes' for Russell, G0FOI. For further details contact David, G1CTO on 0924 497767.

Trafford Amateur Radio Club has its Preparation Meeting for the G-MEX Rally. For details contact Malcolm Collis on 061 748 8046.

Meetings for Friday the 18th of February:

Goole Radio and Electronics Society has a Quiz evening. For further details contact Steve, G8VHL on 0405 769130.

North Ferriby United Amateur Radio Society has a Members' Problems and Tips evening. Further details from Frank, G3YCC, tel: 0482 650410.

South Manchester Radio Club has a talk entitled 'Future Communications' by G4HOW. For further details contact Edward, G7FQY, tel: 061 969 1964.

NEWS FOR SCOTLAND

Meeting for Tuesday the 15th of February:

Dundee Amateur Radio Club has a talk entitled 'Computers in Your Amateur Radio Station' by Allan, GM4ZUK. Details from GM4FSB who is QTHR.

Meeting for Wednesday the 16th of February:

Glenrothes and District Club has a talk on 'The Radio Control of Model Aeroplanes' by the Fife Model Aero Club. Details: GM1BID, 0592 267515.

Meeting for Thursday the 17th of February:

Dunfermline Radio Society has a talk on 'Moon Bounce' by David, GM4JJJ. Further details from Wallace, GM0GNT who is QTHR.

NEWS FOR WALES

Meetings for Thursday the 17th of February:

Rhondda ARS has a talk: 'TV Bandwidth' by GW1ABB at the NUM Club, Tonypandy at 7.45pm. Details from Dennis on 0443 440680.

Swansea Amateur Radio Society has a Planning session for 'Thinking Day on the Air'. Details from Graham, GW3SIY, on 0792 403527.

NEWS FOR NORTHERN IRELAND

Meeting for Wednesday the 16th of February:

Belfast RSGB Group has a talk entitled 'Raynet' by Ian, GI4MDD starting at 8pm. For further details contact Richard Ferris,who is QTHR.

And that's the end of this week's GB2RS news broadcast, which was prepared by the Radio Society of Great Britain.

1400. Re: Do NiMH Batteries Dev. Memories?

Newsgroup: rec.radio.amateur.misc

> Do NiMH batteries develop a *memory* like NiCads do if they are recharged too
> often before they're fully discharged?

NiCd batteries don't do this. Charge memory isn't caused by recharging too soon. It is caused by repeatedly discharging to the same depth and then recharging.

Even so, the construction of modern NiCds is such that it is extremely difficult to produce the memory effect. 20 years ago, it was much easier.

The only instances of NiCd memory I'm aware of involved Police HTs which were used for a fixed period (1-3 hours), then tossed back into the charger at the station. Since the period was repeated over and over again, the batteries eventually got "used" to that charge level. After about 100 such cycles, if you tried to use them longer, the voltage dropped off rather quickly.

A good example of why NiCd memory is a myth. I have an electric razor that I've used for 12 years. That's thousands of charge cycles to the same depth. Yet the razor still works fine. The NiCds have outlasted the wiring to the razor motor (which I've repaired about 15 or so times).

The best thing you can do about NiCd memory is to forget it.

Two rules for long NiCd life: don't overheat them by overcharging; don't discharge them too deeply, or you may get cell reversal in the pack.

There have been a few occasions where I've had to send him cards & $$ several time to get the card.

However, this past bureau shipment contained a card from XU5SE. The back of this card says, "Via F6FNU".

I don't recall whether I sent it to XU5SE via the bureau, through N7RO or direct to F6FNU and he just returned it via the bureau.

I CAN say that I was surprised.

1403. Butternut HF6V upgrade kit ???

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 18:20:03 UTC
From: milewski@oregon.uoregon.edu
Message-ID: <milewski-110294101401@fp2-st-affairs-11.uoregon.edu>
Source record: 271254

Now that I finally have a radio that covers the WARC bands, I'm thinking of getting the add on kit for 12 & 17 meters for my Butternut vertical.

Does anyone have any experience with this upgrade?

I'm specifically interested in whether the bandwidth is narrowed on the other bands once this kit is installed.

For example, Butternut has said that the 160 meter add on kit will narrow the bandwidth on 80 meters. Will this one affect the others to any great extent?

BTW, the Butternut is the best performing vertical I've owned. I'd love to see what I could get out of it if I got it up in the air. Right now it's ground mounted with 17 radials, most of which are cut for the higher bands.

Since Dec. 1989, have worked 275 countries overall with it (about 268 of them running barefoot). Also have worked 150+ countries on 40 meters with it, at least 110 of those running barefoot.

Performance barefoot is dropping off considerably with the solar cycle the way it is these days, but for a vertical, I'm still very happy with it.

>Are these retunable for 2m? with the right split, or modifiable to be so?
>(as easily as you described)

No. If you want a 2m rig, look for a VHF High-band radio. They come
in splits like 138-150, 150-162, 162-174. The obvious choice is the
split similar to 138-150; it should simply tune and play. The next
choice is the 150-162 split; they often just tune down to 146Mhz with
no work, but there is the risk that they won't. Sometimes you can add
a few capacitors, etc., but if the helical resonators won't peak at
your frequency of interest, you're better off looking for another
radio. It is my experience that land mobile gear is highly reliable
until you start making major modifications, i.e. use a 162-174MHz
radio for 145MHz packet, etc.

>With a service manual, I wouldn't be afraid to retune an old commercial
>rig, the trick (secret?) seems to be in knowing *exactly* what old rigs
>will retune without (much) part swapping. Any (further) pointers on

Exactly! The trick is knowing which ones are "better" and which
ones won't work. I've long promised to write a "Land Mobile Gear on
Amateur Radio" FAQ, but have yet to spend enough time....

> Thanks very much!
> Bill

I think you'd have a better chance of doing this if your last name
was Gates, not Ross. Does that help you guess what sort of cost we're
talking about?

Seriously, there's no way to do this except with a satellite or a land
line (probably a fiber) and lots of very fancy, very expensive gear.
There's no way at all to do this with radio. HF can often propogate
to anywhere on the planet via skywave (bouncing off the ionosphere)
but not reliably and there's no way anyone's going to give you the
spectrum you need to move 1Mbit/sec that way (we're talking international
treaty kind of limitations!) There's enough spectrum if you can use
UHF or higher frequencies, but these are line-of-sight only, which is
why you need a satellite.

I suggest it's time to reconsider whether this is really something
you "need". :-)

Mark Curran (curran@corona.med.utah.edu) wrote:
: Thanks for your reply Terry.
: Since the Vertical mail made it out to the usenet, I'll
: fill in the details. I'm interested in constructing a
: ground plane for 20 and/or 40 and was interested in
: finding out what has worked for others in terms or
: materials and layout. There is an artical from 1988
: QST describing elevated GP ants using 4 radials, rather
: than 120+ buried, and claiming good theoretical results.

I use a ground plane on 40 meters. It is full sized (33 feet long) and sits on a 4 X 4 piece of wood buried in the ground. I have (for convenience only) a tilt-over arrangement with the support. The aluminum tubing starts out about 1 3/4 " and tapers as you go up. The base of the vertical is about 20 feet off the ground. I have had this same antenna 12 feet off the ground with nearly good results. I have 6 radials draped off of it at about 45 degree angles, and they are fastened to whatever I could find (trees, pvc pipe, etc). My antenna puts me (on a DXing basis) in the second level in a pile-up. The first level being those with 3 element full size beams at 120 feet, etc. There has been occasions where I have beaten some of them out when the propagation was favorable. In a nutshell, I will continue to use this antenna until I (if ever) get to the 70-80 height with my tower. Then I would start thinking about other antennas. If you don't put down a zillion radials, don't even try mounting a vertical on the ground unless you are easily satisfied. Some people claim that they have good results with a vertical on the ground, but you can bet they don't work DX.

The second best (in my opinion) antenna for the lower heights is the loop or delta loop antenna. It is quieter on receive than a vertical.

Doug N4IJ

: Specifically in my installation, I lack high supports
: for dipoles, zepps etc, and although my ladder line fed
: 80' flatop apparently works well, I was hoping to achieve
: a low angle of radiation and possibly better DX conditions
: by going vertical.

: A more appropriate forum for this is probably r.r.a.antenna,
: and I'd happily take comments to my e-mail box.

I am considering getting DX Desktop 2.0. It is a windows-based hardware and software package that integrates a TNC and radio to a database. I saw a demo a couple of months ago. The thing I like about it the most is that it requires only one comm port by using a plug-in card that connects to the TNC, radio, and rotor. The thing I dislike about it the most is the price, $289!

Has anyone used this package? How stable is Debco Electronics? Are they going to be here next year?

I am currently using DXBase. Has anyone imported DXBase into it?

Any comments would be greatly appreciated.

Thanks and 73,

Mike, WA5CMI

Greetings -

If you want to answer this yourself try printing upper-case 'E' and then print lower-case 'e' - big difference time wise !! Now you know that printing in 'caps' is not the way to do it.

Next limit yourself to printing lower-case characters and print lower-case 'e' many times - see how many you print in 15 seconds. Repeat this using cursive and you have the answer. Every time you have to lift the pen from the paper it slows you down....

I could not print fast enough to pass the code test at 20wpm using upper-case printing (I use upper-case block printing because my cursive writing is so bad that most people have a hard time reading it) so I converted to cursive when copying >20wpm.

Once you are comfortable copying hi speed CW you will just 'read' it in your head and only list things on paper like the persons name and address.

Good luck

Try it! Take some text (newspaper or whatever) and see how fast you
can copy it down both ways. Personally I find that over about 25 wpm
I have to switch over to cursive writing.

Richard L Barnaby (barnaby@world.std.com) wrote:

: What I use is a lowercase cursive 'e' (looks like a squiggle) for "E" ...

"E" is the hardest letter to copy fast in Morse code for two reasons:
It is the fastest to send (a single dit) and the longest to write
(4 separate lines). The standard solution most telegraphers have used
for decades is to write the "E" in a single motion like a backwards "3".

Fortunately, the other short letters (T, I, S) are also fast to write.

The following article was lifted from the February 1994 edition of the California Public-Safety Radio Association (CPRA) newsletter and is written by Mr. Robert A. Stoffel. Mr. Stoffel is the Operations Chairperson. CPRA is a Chapter of Associated Public-Safety Communications Officers, Inc.

I've edited the text very lightly, but the information is unaffected. The article is posted in rec.radio.amateur.misc because amateur radio is discussed as a disaster recovery aid.

CPRA - Operations Chairman
Robert A. Stoffel
County of Orange
Communications Division
840 N. Eckhoff St, Suite 104
Orange, CA 92688-1021
Phone: (714) 834-7211
FAX: (714) 834-7210

NEWS AND VIEWS FROM THE OPERATIONS COMMITTEE
. . "Attention All Units and Stations"

Greetings from the Operations Committee. Everyone in Southern California is still talking about the recent earthquake, so I thought I would take a trip to the public safety communications center that was closest to the epicenter. This was of course the California State University Police Department at California State University, Northridge. The Police Department is on the first floor of a four story building located on the campus. The other three floors are used for student dorms.

Cal State Northridge Police Dispatch is like your typical small sized law enforcement operation. The Police Department operates on a VHF high-band simplex radio system, with a remote base located on top of an eight story campus building. A backup local base is also installed at the police building. Communications on this channel, plus several other campus operations is accomplished from a two-bay, Motorola CentraComm II console. The center also houses a compliment of equipment, including a CLETs terminal, CCTV monitors, alarm panels and printers.

During the early morning hours of January 17, only one dispatcher and one patrol unit was on duty. Most of the campus was vacant, as the school was on recess. Only about 500 students were living in campus housing facilities, as opposed to the 2,000 that are normally on-site when school is in session. This of course doesn't count the

many thousands of students who would have been on campus if classes were in session. At 04:30:55.3 (local time) the M6.8 earthquake struck, and immediately knocked out all power and telephone systems. All contents inside the dispatch center went flying, and the immediate structural damage started. The emergency generator did not start, causing failure of the base station radios and loss of all power. The dispatcher was able to escape flying and falling equipment until the shaking stopped, however, the damage was so severe that the doors were jammed shut, preventing an exit from the building. Another officer was able to help the dispatcher escape, On the way out, all portable radios were grabbed and brought out with them.

With no place to go, all operations were moved to an open field on campus. Operations continued in this field for the next 24 hours until inspection teams checked the damage and declared it safe to return. Officer Dana Archer, who was off duty at the time, arrived on campus within a couple of hours. Having a background in communications, Dana was able to improvise a field dispatch center.

This was accomplished by taking a mobile radio, hooking it to a power supply, then to a portable generator. A car antenna was used as the "base" antenna. By the second day Cal State University, Fullerton provided a mobile command post trailer that was used as a field dispatch center, especially during aftershocks when the main building was again evacuated.

Officer Archer provides some food for thought, after experiencing the devastation of this earthquake, for other dispatch centers. Start with the basics, like ensuring all equipment in the center is secure, and supplies like water and food are readily available.

From that point, make sure that bigger things are established in your agency. For example, each agency should have a designated ECO and a mobile command vehicle that can accommodate a communications center operation, should it be necessary to evacuate your own center. Have some type of back-up communications equipment that can talk to an adjoining agency. Cal State Northridge Police have an LAPD radio, and all emergency requests for law and fire assistance were placed over this radio, since all phone lines were down. Several fires broke out on the campus, and this was the only link available for obtaining assistance. Finally, use the resources of amateur radio. If not established, start a RACES program to supplement and support the communication needs of your agency when disaster strikes. Cal State Northridge does not have such a program in place, but Officer Archer noted that if they had, it would have been an excellent way to communicate with the "outside world".

I want to thank CSUN Police Office Dana Archer for taking the time to give us all something to think about, and items to check on at our own dispatch center. He leaves us with this comment, which applies to every agency, large or small, "If you are expected to provide public safety service, you have to have a plan, a back-up

plan, and the facilities to handle an emergency such as this."

> As far as I know, it's the only 800Mhz radio that does.

No, almost every older 800 MHz radio used the UHF connector because
most service technicians could not properly assemble any other style. This

changed when crimp-on connectors became available and reliable; that is
also when Cellular started using the TNC rather than N.

Now that the Mini-UHF is readily available you will see them on all kinds
of RF equipment. They are properly designed to maintain a near 50 ohm
impedance at MUCH higher frequencies than the old mis-named UHF models.
Of course if you want the ultimate in both small and low VSWR, try the SMA.

> It
> also uses an automotive trailer power connector wired backwards
> (exposed +12v), so I don't consider this to be an exemplary radio.

Take another look at that power cable. On the power source side the +12
is the protected lead, not exposed, and it's still the same on Motorola
products today. Don't go by the color code on the pigtail in your car -
I've found an awful lot of people who ignored red and black when they
bought cables surplus. The key is that the ground lead on the source is
exposed, the source is protected. If your radio isn't that way, it was
serviced by someone who put the connector on backwards when he finished
working on the board!

>

Same thing happens even with the big stuff like 7/8", so ALWAYS unroll it
before you connectorize.

: A mailing I read is involved in a comparision of the speeds of
: printing and cursive writing. I decided to consult some experts.
: So, all you high-speed CW ops, which do _you_ use?

Cursive is definitely faster than printing. Using a keyboard is much
faster still. The best is to copy in your head. For me, I'll use pencil
and paper up til around 25 wpm; more likely a keyboard which is comfortable
(for me) up til around 35-40 wpm. If you use a keyboard, at higher speeds
you generally have to read the text of what you typed to know what you
copied - it (the code) passes directly from your ears to you fingertips
and doesn't stop off in the brain. ;-) For anything >40 wpm, I personally
have to copy in my head and make notes, where possible, on paper.

It sounds as though Mark Twain was right when he described golf as

"A good walk ruined."

I wonder if just hanging around all those country club types
could cause cancer.

The key to handling Dayton Hamvention traffic is simple. Arrive early and stay late. People who plan on getting there at 8 or 10AM are just asking for trouble, IMHO. Yes, I know I'm spoiled because it's just up the road, but when I've gone at 5-6AM it's never that much of a hassle. After closing it's busy, so plan on taking the latest 73 with you and having another mett or brat before heading out to your hotel/mall parking.

This is supposed to be fun, folks! (-: (he says, elbowing his way close to the boatanchors).

>Scott NF3I Just takes time, I guess. Throwing away the pencil is the key.

I'm getting there with short words and prefixes and suffixes. However, it has seemed to me that the "single-letter" stage was a necessary one for me, and I still have to resort to it when hearing callsigns and wierd abbreviations. Also there are occasions where I copy with pencil and paper, and then later by a process of inference, figure out what the stuff means. So, I don't think throwing away the pencil is good blanket advice for everybody under all circumstances. ----- Phil Emerson, AA8JO.

1422. Re: Butternut HF6V upgrade kit ???

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-11 23:33:43 UTC
From: rovero@oc.nps.navy.mil
Message-ID: <CL32s7.BEM@taurus.cs.nps.navy.mil>
Source record: 271273

In <milewski-110294101401@fp2-st-affairs-11.uoregon.edu>, milewski@oregon.uoregon.edu (Steve Milewski) writes:
>Now that I finally have a radio that covers the WARC bands, I'm thinking of
>getting the add on kit for 12 & 17 meters for my Butternut vertical.
>
>Does anyone have any experience with this upgrade?
>

The add-on 12/17 kit did not affect the lower bands, but did affect
tuning on 15 and 10. Then when I moved I ended up completely
retuning -- changes in 40m tuning really affected all higher bands.

I'll agree with you that the Butternut HF6V is a great antenna. I run
it with the feedpoint 7' up and elevated radials.

1423. Help Wanted for Portland Marathon

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-12 00:11:18 UTC
From: brucec@tekgen.bv.tek.com
Message-ID: <5263@tekgen.bv.tek.com>
Source record: 271275
Cross-posted to: rec.radio.amateur.misc,pdx.running

Wanted: A volunteer for the Portland Marathon to work as special assistant
to the Strategic Communications Coordinator. The ideal candidate would have
experience in communciation systems (like 2mtr Amateur Radio),
be an experienced runner, and had some experience working at running events.

The job is to help coordinate communication systems on race day. This
includes schlepping radio's and phones; setting them up; working with
Hams, Police, and Medical personnel. It takes a few hours a week in
September until Race Day. Its an all day thing on Race Day.

The reward: a T-Shirt, maybe a hat (if we're lucky), you might also get
to save a life or two, you get to work with some excellent people.

The Portland Marathon happens in late September/early October.

1424. Help w/ GE MPro Repeater

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-12 00:37:15 UTC
From: sterman@coyote.rain.org
Message-ID: <2jh8br$bps@coyote.rain.org>
Source record: 271276

I need help obtaining crystals for a GE MasterPro Repeater
that I recently obtained and would like to test and prepare
for operation. Can anyone suggest a Mail-Order outfit that
would have them. I have the tubes already.
I just want to start out testing the thing simplex so I can
learn......
Please E-mail to sterman@rain.org KD6BYG

1425. Battery limits for HTX-202 ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-12 00:45:57 UTC
From: partos@lilac.cs.odu.edu
Message-ID: <PARTOS.94Feb11194558@lilac.cs.odu.edu>
Source record: 271277

Does anyone know if there is a circuitry difference in the HTX-202
that prevents the use of high voltage ,(12 v) batteries even though
the external DC jack allows the use of 13.8 v ? I have been told
several stories on this. Could this have been fixed in the 2nd version
of this radio? My circuit diagram (2nd version) shows no difference
in the input circuitry, but people have told me no to use batteries
greater than 9-10 v. Any comments appreciated.

Message-ID: <CL393q.295@murdoch.acc.Virginia.EDU>
Source record: 271129

I worked Danny, T93M, on 12 May 1993. He said he was in
Sarajevo. Unfortunately, I don't know if he is still
transmitting (or alive, either). We talked on 21.282 SSB at
1842 UTC. I didn't get a chance to chew the rag with him since
he had a big pileup of folks trying to get to him. His QSL
manager is DL8OBC.

I know this info isn't directly relevant to the number that was
posted, but if you managed to reach DL8OBC, he/she might be
able to tell you the current operating situation.

Close. There is a YL that checks in from Alaska on a fairly regular
basis. The weeks when she shows up are the weeks we have more check-ins on the
net. hmmmmmmm......

1430. Re: ICOM IC-28 series mods needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-12 03:26:30 UTC
From: lmarrin@delphi.com
Message-ID: <BAzKNJu.lmarrin@delphi.com>
Source record: 271132

Gary following is a transmit mod for the Icom 28. A friend tried it
and it works.

By the way, the Icom 28 is very popular among the small fishing fleets
in California, as the transmit mod is very easy. Commerical fisherman
sometimes do a lot of bootlegging, in the hope that competing fleets
won't be listening in.

ICOM IC-28A AND IC-28H

To make the IC-28 transmit 138-174 MHz, cut D21 (no retuning
required). D21 is a tiny glass diode standing on-end near the center
of the upper circuit board, accessible by removing the top cover. The
IC-28 is the only convertible ham rig I know that covers the 170-MHz
federal government (including national park) frequencies.

[Please excuse me if I posted this to an inappropriate news group.]

I am looking for a good receiver to integrate into my system. I want
a receiver that will have a good bandwidth SW PLUS AM & FM in one unit.
Unlike in Asia (and probably Europe), such units are hard to find here
in the USA. I have inquired at a number of stores and they don't carry them.

Any information regarding where I can find such units, approx. pricing,
alternatives (I am an absolute amateur putting together my sound system
for purely personal pleasure), obstacles to importing (if that's an option)
will help me greatly.

PL. E-MAIL ME. Many thanks in advance,

Gowri Narla

>Now that I finally have a radio that covers the WARC bands, I'm thinking of
>getting the add on kit for 12 & 17 meters for my Butternut vertical.
>Does anyone have any experience with this upgrade?

Steve, I also have the HF6V and am very pleased with it. Mine is
mounted on the roof of my mobile home with 8-12 radials for 10-20 and 8
or so on 40. The roof of the mobile home is metal too but no good way to
make a solid connection to it.
I have the 17/12 and 160 meter add on kits and have noted no
severe change on 80 meters or other bands. You should already be aware
since the antenna is so short for that band the bandwidth is only about
25 Khz. I have mine tuned around 3795 but weather can make a severe effect
on it.
>
>I'm specifically interested in whether the bandwidth is narrowed on the
>other bands once this kit is installed.
>
>BTW, the Butternut is the best performing vertical I've owned. I'd love to
>see what I could get out of it if I got it up in the air. Right now it's
>ground mounted with 17 radials, most of which are cut for the higher bands.
Always wondered how ground mounting it would change things. I believe
mounting it up in the air somewhat helps to make the counterpoise more ef-
ficient. The ARRL Handbook says a true ground plane mounted 1/2 wavelength
above ground only needs 4 or 5 radials. I kind of combine the effects of both
round mounted and ground plane by having it 10-12 feet above ground but on
a metal roof with many radials. Whatever it takes to get the angle of radiation
down and work the DX/Contest.

>Since Dec. 1989, have worked 275 countries overall with it (about 268 of
>them running barefoot). Also have worked 150+ countries on 40 meters with
>it, at least 110 of those running barefoot.
>Performance barefoot is dropping off considerably with the solar cycle the
>way it is these days, but for a vertical, I'm still very happy with it.
>Steve
Nice going. I have had mine up sind 1985 and don't really know how
many I have worked on it. But the last few were ZS8MI, CY9CWI, J5UAI, 3C1TR,
S21ZG, etc. Let's me know it is getting out. Now if I could get some decent
propagation and work the 3Y0PI.

Best of luck,

Around 25 years ago, I started to receive and exchange letters with a Russian ham - Anatoly Repin who at the time had held the callsigns UV0IA and UW1BF. We exchanged several letters and photos. Our letters trailed off after I moved away from home for college and career. Then, a couple of years ago, while living in Japan, I once again started receiving letters from him forwarded to me from my US callbook address. This time he explained that he was an ethnic Finn and now used the name Toivo Laimitanen. His current callsign is RA3AR. He sent several photos of himself and I have seen seen some of these photos appear in the past year or so in a couple of ham magazines (QST and DX Magazine, I think). His letters have described some of the severe hardships he faces in the current times in Russia. I am curious to know if any other hams have had similar exchanges with him or others in the former Soviet Union.

1435. 1994 Central States VHF Society Conference

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-12 13:55:45 UTC
From: rc@cmr.ncsl.NIst.GOV
Message-ID: <9402121355.AA07222@cmr.ncsl.nist.gov>
Source record: 271137

NOTICE
Preliminary Announcement
1994 Central States VHF Society Conference
July 29-30, 1994, Memphis, TN

I have just received the preliminary announcement of the 28th Annual Conference of the Central States VHF Society. It will be held from July 29-30, 1994, at the Wilson World Hotel, 2715 Cherry Road, Memphis, TN. Though not mentioned below, the formal part of the conference is dozen or two good technical or operating talks, Friday and Saturday during the day. Generally about 1/3rd of the presenters have some sort of doctorate (PhD, MD, etc).
Dave Meier, N4MW, the organizer and thus CSVHFS president, says: "The conference format will be as usual, with Friday night flea market and Saturday [night] banquet. In addition to the usual conference activities there will be an informal Thursday night [July 28] EME show-and-tell session....
"Let me introduce this year's Society Vice President, Joel Harrison, WB5IGF. Joel is the recently re-elected ARRL Delta Division Director, so congratulations are in order. Joel is active on all VHF bands, 432 and 1296. He holds WAS on two meters via EME. As an active VHF contester, he arranged to move the ['94] June VHF contest to eliminate conflict with the '94 ARRL National Convention....
"Submit material for publication in the conference proceedings to Joel. Also, let him know if you can be a presenter at the conference. So far we have Wal House WK6KZ and Don Graham VK6HK visiting from Australia. Wal agrees to make a presentation on VHF/UHF/SHF in Australia. ... Send your material to Joel Harrison WB5IGF, 528 Miller Road, Judsonia, AR 72801.
"... Al Ward [WB5LUA] volunteered to handle the noise figure measurements. Kent Britain WA5VJB and Marc Thorson WB0TEM will handle antenna measurements....
"Cissy (AKA Joyce Meir N4ZRW, is arranging the family activities for the conference. Cissy is involved in local club activities, serving last year as the Memphis hamfest Forums Chairperson...." [The CSVHF Conference always draws a large contingent of spouses and children.]

For more info, contact me (w3otc@amsat.org) or Dave (Compuserve/INTERNET 71571,1744@compuserve.com).

73, Bob W3OTC

>: what the cause is for the golf course managers: too much fresh air?
>
>I think the answer is obvious (if you weren't kidding), pesticides and
>fertilizer.....Doug, N4IJ

Not so obvious. Studies tracking cancer rates among farmers show hot spots as well as areas of reduced cancer incidence among farmers in various parts of the country. No correlations to pesticide or fertilizer types or usage have been found, just geographic anomalies. What that means isn't exactly clear, but it shows that there's no one to one correlation between either pesticide or fertilizer use and cancer incidence. (My personal *opinion* is that what's being seen is the result of genetics, IE farmers aren't known to move about much and tend to marry locals, so genetic predisposition for certain cancers can be amplified in certain geographic areas.) Farming, of course, continues to be the most dangerous occupation in the US with more occupational injuries and deaths than any other large scale occupation. By comparison, the occupation of police officer is rated rather low on the scale of occupational risk. Just goes to show how perceptions and reality often don't match.

: Is this an Iambic keyer or a regular keyer. I haven't used an iambic
: keyer (saw one once) but it seems like it'll take relearning.
: Is it worth it? Comments anyone?

Yep - just about all the keyers made over the past decade or two have
been *capable* of iambic operation. However, if you have a non-iambic
keyer paddle - they will still work. I prefer non-iambic myself, having
started out on a bug many, many years ago. The Logikey/CMOS Super Keyer II
is wonderful in either iambic or non-iambic operation (I have used both).
Iambic DOES take relearning and involves much less wrist movement than
non-iambic single lever paddles and is probably the way to go IF you are
a newcomer to keyers. IF you learned on a bug and/or LIKE non-iambic
keying - why bother to change?

>I am certain that I am not breaking new ground here.
>Has anyone played with this who could comment on
>how practical this would be?

Well lets look at some numbers and see. Lets assume
you want "broadcast" grade audio. That's a SNR of
50 db. Digital transmission regenerates bits so
that above a certain threshold level the effective
SNR is only the quantization error of the digital
equipment itself. A crude way of looking at this
is to consider this error as bit jitter at the lsb-1.
So an 8 bit system would have a SNR of 10*log(2^9)=27 db.
That's obviously not good enough. 16 bits yields a SNR of
10*log(2^17)=51 db which is close enough for our purposes.

Now the Nyquist limit says we have to sample at a minimum
of twice the highest frequency in the audio. If we assume
that's 5 kHz, then our minimum sample rate is 10 kilosamples
per second. That requires a very good brickwall filter, however,
so sampling is usually done at a somewhat higher rate, say 3X
or 4X the highest audio frequency. Lets pick 3X. So our required
bit rate is 16*15,000=240 kb/s. That's not going to fit in a
normal FM two way radio bandwidth, so we're going to have to
resort to trickery.

Codecs use various compression schemes to lower the effective
bit rate. Delta modulation is one such trick, and LPC (linear
predictive coding) is another. These are effective real time
compression methods, but do suffer some artifacts. Or we can

take a page from the newer high speed telephone modems and use
LZW type on the fly lossless compression and complex modem
encodings that use less than one baud per bit. Off the shelf
modems can deliver up to 56 kb effective data throughput over
voice grade channels wsing a base baud rate of 600 baud. That's
not quite good enough though.

Or we can abandon voice grade radios for the links and use purpose
built digital radios with higher baud rates. If we take a 56 kb
WA4DSY RF modem (GRAPES), and couple that with an on the fly
compression scheme like LZW, we can easily get the required 240 kb/s
throughput for broadcast grade audio without dealing with the timing
artifacts of delta modulation or LPC. Occupied bandwidth would be
less than 70 kHz.

If we can settle for less than perfection, however, Motorola has
a codec scheme that they claim can fit a digital voice signal in
the same bandwidth as a NBFM voice signal, IE 20 KHz. It won't
work through off the shelf FM radios though, a purpose built
radio is required, and it won't yield "broadcast" SNRs. I have
the write up on it around here somewhere, but can't lay my hands
on it right now. I seem to recall that its an 8 bit system so
the SNR is going to be around 27 db. It should be noted that hams
consider the 20 db quieting level "full quieting" and thus perfectly
acceptable audio quality.

>I just received a catalog from Consumer Microcircuits
>Ltd in the U.K. listing a CVSDM codec. I remember
>playing with these in electronics lab in college;
>would these provide a narrow enough digital signal
>to shove through a radio system designed for 5KC
>bandwidth given a band-limited audio input to the
>codec?

I don't know this codec. What are the specs? Note that
typical telco "voice grade" codecs have a bit rate of
around 16 kb/s by use of aggressive coding schemes.
Using MSK methods, that could be transmitted in a
22.4 kHz channel. But they won't deliver the "broadcast"
grade audio you apparently want.

>I don't recall if the output of such a codec would
>be transmittable over the air or would require
>a modem of some sort. If so, this might kill it.

Direct FSK is a bandwidth hog, so if the codec data rate
is fairly high, some sort of modem scheme, such as the
above mentioned telephone modems or the WA4DSY MSK design
would be indicated. Naturally, straight AFSK used over a
FM radio is even worse than direct FSK, and should be avoided
at all costs unless the data rate is *really* low, say 1200
to 2400 b/s.

>Our link system currently consists of link repeaters
>serving a locale, linked to the next hub via a
>transciever located at that next hub site. I envision
>a digital system which could sync up rather quickly
>as the transceivers keyed up each time. I would rather
>not put up a full-duplex RF system just to keep
>the modems happy. I have lots more to tell but
>I'll shutup now.

The DSY RF modem will sync in 5 ms (depends on transverter
TR time too) so it should work in a half duplex setup. That's
better than the squelch response time of a typical FM voice
radio. High performance phone modems need a training sequence,
and that pretty much mandates full duplex full time links.

We're not arguing over *results*, we both agree on the patterns
so ELNEC wouldn't settle anything there. What we're discussing
is the most useful way to visualize what's happening in and around
the antenna from a "first principles" point of view. (At least I
am, I'm not sure Al is coming from the same direction.)

Several positive trends continue this month. Readership is up dramatically in all active newsgroups (closely following Usenet's predicted exponential growth patterns). Previously tied, rec.radio.amateur.misc has surged ahead of rec.radio.shortwave, which is running second this month. Other newsgroups with extremely strong showings are rec.radio.swap and rec.radio.amateur.policy (meeting their respective goals of keeping for-sale messages and extended legal debate out of the main discussion newsgroup). Currently, rec.radio.amateur.homebrew leads the other new rec.radio.amateur newsgroups by a slight margin, although all are roughly at the same order of magnitude. The recently-created rec.radio.scanner is slowly gaining in readership as well, its propagation almost tied with alt.radio.scanner, which it supersedes. Recently, Chris Yoder (chris@tali.hsc.colorado.edu) sent out an rmgroup for alt.radio.scanner. Unfortunately, a user at another site (infamous for doing these things) took Chris's rmgroup message, converted it to a newgroup message, and sent it back out. Because of this, alt.radio.scanner will not be deleted at sites that obey control messages automatically. Be advised that the newgroup message is a forgery and only the rmgroup message should be carried out.

It is expected that the newly-created newsgroups will continue to grow in readership like previously-created newsgroups such as rec.radio.info and settle out at about 60-70% propagation. If these new radio-related newsgroups still haven't reached your site, please ask your news administrator to create them (refer him/her to the new newsgroup announcements by Dave Lawrence in news.announce.newgroups or the messages posted to the new newsgroups piling up in "junk" :-). Especially point out to him/her that cost/per-reader/per-month is significantly down in all newsgroups.

The defunct newsgroup rec.radio.amateur.packet has been rmgrouped as of September 21st, 1993, and is no longer connected to the PACKET-RADIO mailing list. Netters interested in packet-radio discussion should use rec.radio.amateur.digital.misc and the HAM-DIGITAL mailing list. Propagation and readership continues to drop in the old newsgroup, which is currently in last place among all the rec.radio newsgroups. If this newsgroup still appears at your site, ask your news administrator to rmgroup it.

Note also that the defunct rec.ham-radio hierarchy reappears this month. If the newsgroups are still active at your site, please try to persuade your your news administrators to delete them as these groups have been rendered obsolete (for over 3 years now) by the rec.radio.amateur hierarchy.

There are a number of different phonetic alphabets, though
Alpha Bravo ... Yankee Zulu is probably by far the best known,
being used internationally for air traffic control, for example.

The NATO phonetic alphabet (aka ICAO alphabet):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

From: sprouse@n3igw.PGH.PA.US
Message-ID: <89@n3igw.PGH.PA.US>
Source record: 271148

I'm looking for an Elmer in the Fort Worth area. My brother called me the other day to say that while attending a training session for his employer in Oaklahoma one of his classmates had shown him a two meter hand held and told him about the fact that there was no longer a code requirement for the techincian license. I think he is hooked!

I advised him to go down to the local Radio Shack and pick up the "Lets talk radio" package. He has a scanner and I gave him several two meter frequencies to plug in and it occured to me that I might be able to find a contact or club in his area that would help him out. If you know of someone who could help him get started please drop me email and I'll put the two of you together. The work load as of late has not let me keep up with net news so please respond via mail. Thanks.

Howdy. Here's a question for anyone who lives in central or east
Tennessee. Are there any 2m repeater links between Nashville and
Knoxville, TN? Or any strategically replaced repeaters (with good reach)
between them that would allow a conversation?

How much power would be required for the second of the above two
possibilities?

Source record: 271151
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I am looking for recommendations for getting a HT. I'm still waiting for my ticket, and I've read that the HT isn't the best thing for a first rig but I'll explain. I'm a undergraduate in a dorm. I can't set up any real antenna. I have no car. However, once I have my license, I'll have access to the school shack. The amateur radio club is in the process of relocating their repeater to the dorm that is about 100m away from me--it's a 2m repeater. What should I get?

I've been looking primarily at dual-banders, especially the ICOM IC-W2A. Any complaints or complements for this or Kenwood's or Yaesu's or Alinco's? I also like the look of having a wide band receiver as the IC-2SRA, but as I already have a PRO-43, I know I don't need it. What are your recommendations? Go new? Go used (I think that there will be an ARRL convention in Dallas area this summer, is that right?)???

I'm kind of flexible on price range--I'm willing to spend a little more if I know I'll be using it for a LONG time.

Where is a good place to buy? Mail order? Tucker's Electronics (ads in _CQ_, etc) is close to my house in Dallas. Any suggestions about dual-band vs. just 2m or 70cm?

Any and all suggestions are appreciated. Thanks in advance.

> (>100W) soldering iron?

I have had real good luck with a little 5 watt iron. All I do is let it
heat up for a while, then hold it on the pl-259 and the coax shielding on
the inside. If I wait like that for about a minute, and then melt the solder
on the tip and let it run into the hold and wait another min, I get a
real good connection.

See ya.

Refering to the Logikey electronic keyer, Richard L Barnaby
<barnaby@world.std.com> wrote:
>
>Is this an Iambic keyer or a regular keyer. I haven't used an iambic
>keyer (saw one once) but it seems like it'll take relearning.
>Is it worth it?
>Comments anyone?

Worth every penny and more. Yesterday, I got the partial kit version,
called CMOS Super Keyer II and sold by Idiom Press. I did not go to
bed till 2am as I was fussing around with the kit and having a great time.
It - accepts commands by paddle, great for mobile operation (my use)
- store upto four messages, soft sectored into a 220 char space
- messages can contain commands to speed up/down, invoke other
messages or itself, user defined breaks for paddle inserted comments
- ultra low power consumption, down to 10ua withing 2 s of idleness
- deals with serial numbers, auto increment, repeat etc
- digital and linear analog speed setting
and much much more.

Here is a short intro to electronic keying. First off, there are many ways
of generating CW:
straight key - quaint but top speed is kinda limited for most ops
mechanical bugs - require training, I would love to master them but
haven't gotten around to it yet
electronic bugs - you make the dahs, it makes the dits. Single lever
paddles are ok. Needs paddles and keyer.
side-swiping - electronic dits/dahs, may have dit/dah memory. Dit/Dah
memory means that the dit/dah elements are self completing
Single lever paddles ok. Many ops use double lever paddles
to do this. Not needed. Electronic keyer needed to
generate the dots/dashes.
iambic - absolutely needs double independent levers in the
paddle. The electronic keyers come in a variety of
flavors. Curtis Mode B is the most common.
keyboard - use programs on pc, tncs or dedicated keyboards. Used
very commonly by super qrq ops, such as k5fo, and
contesters (keyer is often part of the logging program
such as CT, NA, N6TR's logger etc.

I use an iambic paddle and keyer built into my TS850 for most operating. When
contesting I use CT. I use the CMOS Super Keyer II (Kit version of Logikey)
in the car with my TS50/bugcatcher.

A few words about iambic paddle operation. One lever, commonly the left
one, is used to generate dits and the other generates dahs. If either
one of levers is held the effect is like using a side-swipe keyer:
continous series of dits or dahs. Most keyers have dot and/or dahs memory
and so touching the dah paddle followed by the dit paddle generates the
letter N. But this hasn't much to do the iambic capability yet. If
both the paddles are squeezed toghether then the keyer emits a continous
stream of alternating dits and dahs (short/long - iambic meter in poetry
and hence the name). This makes sending code much easier. For instance
to send the letter C, you just hold the paddles together starting with
the dah paddle. The point at which you let go depends on whether it
is a Mode A or Mode B paddle. With mode B you let go of both paddles
while emitting the dah. In mode A, an older mode that is favored by some ops,
you have to let go *after* completing the dah element.

This may sound complicated but is easily unserstood by playing with a keyer/
paddle combo for a while. Also check out (part of my handout to CW students):

1. The iambic gambit. By Lew Fay, AA5Q. QST (I forget the year/month)
2. Keys, Keyers and Keyboards. By Bruce Hale KB1MW QST Dec. 1989.

Hope this helps.

: (They're mostly grass, aren't they?)

Yes, but it has to be perfect grass. They put so much crud on
golf courses that it made "60 Minutes" when a golfer died from
a reaction to the fungicide that had been spread.

As an example, Diazanon, used for Crane Fly uses 3/4 cup concentrate
for 500 square feet. When used on apples to control Codling Moth,
it's one tablespoon diluted in a gallon of water. (For me, this covers
3 semidwarf trees. And you usually get a headache if the wind blows
the spray back at you. And you can't eat the apples for two weeks.)
The Crane Fly larva eats grass roots. I think they've delisted this use.
I sure as hell wouldn't want to drink well water from under a golf course.

Geez Greg, how do you know that ``...few ever build...'' those circuits?
Have you taken a poll? You sound like someone else on here who tries to
pass opinion as fact.
And are you saying that few are building QST's circuit or that few are
building period? If it's the latter, why would the rec.radio.caretakers
create a new newsgroup, .homebrew?
And those kit manufacturers advertising in QST must be selling kits
otherwise they wouldn't be in business year after year.
I can't begin to tell you the huge number of folks that are building
and modifying kits on the QRP mail net.
Can you imagine what your subscription/membership fees would be if QST
didn't acccept advertising dollars?
It's usually the appliance operators who scream about how much space
is taken up in QST with circuits...

Even though you're wrong on all counts, 73 to you Greg.

(Thanks all for the responses on my YX0AI/F6FNU/N7RO question)

For the past year or so, I've had a very bad noise problem while operating on the HF bands. Since I've been a lot more active the past few months, this is really starting to frustrate me. The noise is not a real choppy sounding noise, but sounds more like VERY strong band noise. However when I have this very loud noise, other stations within a few miles have no noise. Neither of the two noise blankers turned up full blast on my TS-930S do much good. I'm using a vertical antenna, so I can't turn it to see which direction it's coming from. The noise is very apparent on all HF bands from 1.8-28 MHz, 144mhz, as well as sparkles on my cable TV. The noise doesnt seem to make it up to 450mhz though, nice and quiet up there.

I have power lines directly in back of my house, but I don't think they are the problem. I've had Southern California Edison come out a few times over the past couple of years and they reported no problems. The noise is not always there and varries in strength each time it comes on. I think the noise is coming from some sort of appliance or machinery from one of the neighbors' houses, but I have no idea how to find it. It is a little baffling though, sometimes I won't hear the noise for weeks, but is has been present this entire weekend 24 hours a day.

Has anybody had experience tracking down and solving this type of noise problem?

Any advice or comments would be appreciated.

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACT

12 FEBRUARY, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACT

NOTE: Intense stratospheric warming is continuing over the north Atlantic,
southern Greenland and Europe. A strong anticyclone exists over
Europe. The center of the polar vortex and the coldest air resides
over northern Canada at 10 HPA.

The 3-Hr Ap Indices for 11 FEB 94 are: 29 43 54 69 53 44 24 34

SYNOPSIS OF ACT

Solar activity was very low. The only actvity this
period consisted of a B9 optically uncorrelated x-ray event.
Weak low frequency radio activity was also observed this
period. One new region was numbered -- Rgn 7670 (N07E74) which
is believed to be the return of old Region 7654. The previous

daily report erroneously mentioned newly numbered Rgn 7669 (N05E58) as the return of 7654. Active surging is present in and around Rgn 7670. The remainder of the disk and limb was quiet.

Solar activity forecast: solar activity is expected to be very low to low. Regions 7666 and 7668 have the potential to produce C-class activity. Development of Rgn 7670 will be closely watched.

The geomagnetic field has been at mostly active to minor storm levels with major to severe storm conditions reported during the nighttime sectors at high latitude stations. A favorably positioned coronal hole is believed to be responsible for this lengthy storm.

Geophysical activity forecast: the geomagnetic field is expected to remain at mostly active to minor storm levels for the first two days of the forecast period. Occasional periods of major to severe storm conditions are likely during nighttime hours at high latitude stations. Activity is expected to moderate on day three to mostly unsettled to active with some minor storm periods at high latitudes.

Event probabilities 13 feb-15 feb

Class M 05/05/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 13 feb-15 feb

A. Middle Latitudes
Active 40/35/25
Minor Storm 20/15/05
Major-Severe Storm 10/05/01

B. High Latitudes
Active 40/40/30
Minor Storm 40/20/10
Major-Severe Storm 15/10/05

HF propagation conditions continued well below normal over all regions. High and polar latitudes continue to show the strongest degradation, as is to be expected. Periods of useless propagation continue to plague these regions. The coronal disturbance which has maintained these conditions is expected to subside over the next 48 to 72 hours. When this occurs, propagation should begin improving - first over the low latitudes, then the middle latitudes, followed last by the high and polar latitudes. The duration and intensity of this disturbance will slow the recovery of the ionosphere.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>it at 12.2 or so; that way I may never have to fix the thing.

While 12.2 volts is probably fine, beware of carrying this idea to extremes. Most of the finals in modern VHF/UHF rigs lose efficiency rapidly as voltage is decreased. You can find yourself with low output and overheated finals if you allow the voltage to sag too much. Also, many of the circuits in the radio become non-linear leading to severe distortion and spurious products if operated below their design voltage. Lots of radios just won't operate properly at all if voltage drops to 11 volts or less.

Mobile rigs are designed to tolerate the range of voltages between 12 and 14.8 volts of the automotive electrical environment. Going outside those limits in either direction can lead to trouble. The ideal voltage for automotive gear is 13.8 volts. You should stick as close to that as possible for best results.

If you want to increase lamp life, wire a resistor in series with the bulbs. Lamp output drops rapidly with decreasing voltage, but life goes up almost exponentially with decreasing voltage. A 10% drop from nominal is about the ideal compromise for lamps. This is *not* generally true for RF transistors or ICs, so they should run at their design voltage.

>the word unless there were preceding context clues. But maybe I
>shouldn't admit that :-)

OK, Alan, I understand what you're saying. My mental "FIFO", however,
is 3 characters or less deep. And that doesn't matter whether the
characters are input via aural Morse, visual flash cards, or spoken
phonetics. Once the depth exceeds 3, the oldest character is gone off
the stack. Attention span deficit, poor short term pattern memory,
or something.

If I can't get the information down where I can take it in as a
gestalt, I can't understand it. VOA slow English drives me crazy,
I have to take notes to figure out what they're talking about, and
my natural text reading speed has been around 1000 WPM since first

grade. Slow is just no go for me, my mind races so far ahead considering contextual pathways that I lose the thread of meaning if the input is less than about 120 WPM.

>cost?

One would hope not, but there are unethical officials in some countries
who will sell you anything for the right price. While I don't think
Morse is a valid testing requirement, I certainly wouldn't countenance
the buying and selling of licenses.

If you can do 8 WPM, you almost certainly can push that to 12 WPM with
some practice in *writing* faster. That's usually the problem at this
speed plateau, you haven't finished writing one character before the
next has started. If you haven't mastered the multi-tasking process
of "copying behind", and some of us can't due to attention deficits
or whatever, then you have to develop a shorthand way of writing that
will allow you to copy in realtime. Work at developing a stylized
character form that requires minimum strokes to accomplish. Some
people can do that by using disconnected cursive, others develop
their own style of printing. Try copying all lower case, it's generally
faster than upper case block printing. If your authorities will allow
you to copy with a typewriter or computer keyboard, by all means take
advantage of that opportunity. It will speed your copy greatly.

Is anyone familiar with HAMCOM2.1?

I am wondering:

If this program actually works...

If I screw up building the receiver, will it be damaged (alright)
or will my computer be damaged (not alright)...

If more detailed construction instructions (sounds like Jesse J.)
are available...

If any other programs with more detailed instructions are availble...

I'd appreciate any thoughts anyone might have on these little matters.

From: t1terryb@cascade.ens.tek.com
Message-ID: <2jln74$qk8@cascade.ens.tek.com>
Source record: 271172

Why I lost the subject line I don't know but anyway here is some possible help for the person with the noise problem

I was going to ask if the noise is just heard on the TS-930 but your later comments indicate you also here it on 2 meters. I suggest taking an HT around the neiborhood and seeing it you can track it down. Some time ago someone said they had good luck with an handheld 2 meter rig for ham radio 'bunny hunting' and could use their body to shield it and tell which direction the noise is comming from. If that doesn't work, use a sheet of tin foil or whatever to make it directional and see if you can track down your noise problem.

One thing, make sure the noise isn't comming from inside your own how buy turning off equipment, or better yet circuit breakers to isolate things. Sometimes you find you didn't know something was on.

Good luck,
Terry Burge

> I also like the look of having a wide band receiver as the IC-2SRA, but
> as I already have a PRO-43, I know I don't need it. What are your
> recommendations? Go new? Go used (I think that there will be an ARRL
> convention in Dallas area this summer, is that right?)???

I have a Yaesu FT-470 dual-bander that I am quite happy with, and the model that replaced it (the FT-530 looks quite nice as well). I have also heard a lot of good things about the Alinco DJ-580, which looks like a wholely excellent radio for not an exorbitant amount of money. The Icoms, in my opinion, tend to be a little pricey.

> I'm kind of flexible on price range--I'm willing to spend a little more
> if I know I'll be using it for a LONG time.

The FT-530 and Alinco DJ-580T are both running in the $375-450 range. I'm not sure how much the FT-470 that I have is since it was a gift, but I think around $400.

> Where is a good place to buy? Mail order? Tucker's Electronics (ads in

I find Tucker's pricing to be a little expensive. I am partial to AES (in Milwaukee, among other place) myself, but if you shop around in the ads in CQ or something like that you may be able to do better than AES's prices.

> _CQ_, etc) is close to my house in Dallas. Any suggestions about
> dual-band vs. just 2m or 70cm?

If it were me, I'd get the dual-bander myself. No sense locking yourself out of all that fun stuff available on 440. I almost made that mistake, and then decided that to ask for a dual-bander would be a lot less painful than kicking myself later for not having one.

> Any and all suggestions are appreciated. Thanks in advance.

If you need any more info etc, please feel free to drop me email (cravitma@cps.msu.edu)

Congratulations on passing your test.

/Matthew N9VWG

1472. Need volunteer operators for Bay to Breakers

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-13 18:42:42 UTC
From: droid@well.sf.ca.us
Message-ID: <CL6En6.E98@well.sf.ca.us>
Source record: 271174

I am cordinating communications volunteers for the San Francisco Bay to Breakers race that will be on May 15th this year.

We will need 60 or so operators to help dispatch the medical teams providing first aid for the runners. We hace a special need for operators who are also runners themselves. One of the assignments is with the Mobile Assistance Teams (MATs) who are on the course to care for those who can't get to an aid station. The operators with these teams should be able to run for a 1/2 mile and still be able to talk when they get to the scene. Operators who are also medically trained are a real plus.

If you wish to join us or want more info send mail to me (droid@well.com) or call your local office of the American Red Cross Bay Area and say you want to volunteer for Bay to Breakers. (Mailing me is better since you will be communicating with me directly, and if you can read this message you can send mail too.) ;-)

Thanks
Marty Brenneis KC6YYP (443.525+ 82.5Hz in Marin County)
KAE7616 (462.700+ 162.2Hz in Oakland Hills)

N0CCZ BECOMES A SILENT KEY

HR AMSAT NEWS SERVICE BULLETIN 043.01 FROM AMSAT HQ
SILVER SPRING, MD FEBRUARY 12, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-043.01

Andy Freeborn (N0CCZ) Becomes A Silent Key

It is with great sadness that AMSAT-NA HQ reports that an old friend of TAPR and AMSAT has become a silent key -- Andy Freeborn (N0CCZ) of Colorado Springs. Andy succumed this past week due to cancer at age 72.

Andy was an Air Force pilot who retired to Colorado Springs where he became an amateur and then later involved in packet radio activities. For a number of years he was a member of TAPR's Board of Directors and he served for a couple of years as the TAPR President. In that role he did yeoman duty for AMSAT coordinating TAPR's involvement in the MICROSAT development and he helped kick off the joint TAPR/AMSAT DSP development activities. Andy will certainly be missed!

BID: $ANS-043.02

Phase-3D Rocket Fuel Tanks Arrive

On February 8, 1994 AMSAT-DL was informed of the arrival of the six tanks for the AMSAT P3-D spacecraft. Each tank is capable of storing about 50 lbs of rocket propellant. The tanks were manufactured in Russia according to AMSAT specifications. AMSAT-DL was able to order and purchase these tanks under very favorable conditions with the help of AMSAT-UA. "The arrival of these tanks constitutes a major milestone in the fabrication of AMSAT's P3-D satellite. It is another shining example of the international cooperation within the P3-D project and amateur radio in general," said Dr. Karl Meinzer (DJ4ZC), AMSAT-DL President and Project Head.

[The AMSAT News Service (ANS) would like to thank Peter Guezlow (DB2OS), AMSAT P3-D Project Team Member, for this bulletin.]

AMSAT Turns 25 Years Old Soon; WA0PTV Is Preparing AMSAT Journal Issue

This spring AMSAT will turn the quarter century mark. The AMSAT Journal Editor, John Hansen (WA0PTV) is already starting to prepare an AMSAT Journal for this historic occasion. He would very much like to hear from the users of OSCAR satellites about what they feel should be included in this historic issue. He is particularly interested to hear from those who wish to contribute information, photos, or articles to this issue of the AMSAT Journal. This 25th "birthday" issue will be published as the March/April issue of The AMSAT Journal. If you feel that you would like to contribute to this "birthday" issue, please contact WA0PTV at either his INTERNET mail address of wa0ptv@amsat.org or to his home address, 49 Maple Avenue, Fredonia, NY, 14063.

ITAMSAT-OSCAR-26 (IO-26) Returns To Service

After the software crash occurred on the 07-DEC-93, the ITAMSAT (IO-26) Command Team decided to delay the reloading of the code inorder to improve the onboard software and further analyze the Whole Orbit Data (W0D) dumps, to better understand the satellite motion and operation. On the 06-JAN-94, the final version of the code was validated by the Command Team and the BBS was re-opened to all the users. The integrated housekeeping software (IHT ver 2.1) now has WOD capabilities and weekly data dumps will be taken without affecting the BBS operations. It should be remembered by all users that the BBS call sign is ITMSAT-11 for receiving broadcasts and ITMSAT-12 for uploads. Also, the standard PB and PG ground software is needed for accessing the BBS. The downlink frequency is 435.867 MHz using PSK at 1200 baud. Albert Zagni (I2KBD), ITAMSAT Command Team member wishes everyone to "Enjoy ITAMSAT!"

BID: $ANS-043.07

STS-60 SAREX Post Flight Synopsis

The first Shuttle Amateur Radio Experiment (SAREX) flight of 1994 can be considered a resounding success. The STS-60 Space Shuttle Discovery mission, which included Astronauts Charlie Bolden, KE4IQB, Ron Sega, KC5ETH, and Russian Cosmonaut Sergei Krikalev, U5MIR concluded on Friday February 11 with a picture perfect touchdown at the Kennedy Space Center. During the mission, nearly 4000 packet connections were made with the SAREX station on Discovery by ham radio operators on the ground. Several voice contacts were also made, primarily late in the mission. True U.S.-Russian cooperation was demonstrated on this flight through on-board experimentation and operation of the SAREX station.

SAREX was officially activated at 14:27 UTC on February 4 with a successful voice contact through the University of Surrey amateur radio station. Doug Loughmiller, G0SYX was the control operator to initiate this first contact with the STS-60 crew.

A highly successful direct contact was completed one orbit later with a school group in Boise Idaho. The contact, held at the Discovery Center included students from several schools including the Boise Senior High School. 19 students were able to ask direct questions to Shuttle Commander Charlie Bolden.

One of the SAREX mission highlights occurred at 10:42 UTC on February 6. Sergei Krikalev, U5MIR, initiated a contact with a school group at the House of Science and Technology for Youth in Moscow, Russia. This represents the first time a cosmonaut on a U.S. space shuttle has communicated with a group in Russia. Leo Lebutin, UA3CR and Valery Agabekov, UA6HZ were the prime school group coordinators for this contact. During the contact Musa Manarov, U2MIR, gave Sergei greetings from Russia. Six students were able to ask their questions to the crew on the Space Shuttle Discovery. In addition, several cosmonauts were on hand to hear the communications. The SAREX contact was also broadcast live throughout Russia on HF (80 meters, 40 meters and 20 meters) as well as on VHF.

Problems with the Wake Shield Facility primary payload affected the SAREX payload somewhat. The Mars, Pennsylvania school contact, had to be rescheduled 4 times before a successful contact was made. 8 students were able to ask questions to Sergei Krikalev and Jan Davis during this contact. The students and teachers should be commended for their persistence and patience.

Other scheduled contacts included the Chariton High School, in Chariton, Iowa, where 3 questions were answered and the James Bean School in Sidney, Maine, where 11 students asked questions to the crew on Discovery.

The following packet message was received by AMSAT member Doug Howard, KG5OA, during one of the last SAREX passes:

[2/10/94 12:11:21]W5RRR-1>QST:
Greetings from Discovery on our sixth day in orbit. We enjoyed a conversation with President Clinton while he was visiting Houston Mission Control yesterday This morning we talked with our colleagues on Mir via satellite and we hope to talk with the Mir cosmonauts today with SAREX. Thanks for your interest and support of our flight. Best wishes from the crew of STS-60.

FYI, unfortunately the Shuttle crew was unsuccessful in their attempts to communicate with the MIR crew using SAREX.

Those of you who have heard or worked the STS-60 crew and wish to receive a QSL card need to send your signal report and an SASE or an envelope and IRCs to the following address:

STS-60 QSL
Education Activities Division
ARRL
225 Main St
Newington, CT 06111

School groups interested in communicating with the Shuttle astronauts are reminded to submit an application and proposal to the ARRL to be considered for a future contact. Final SAREX school group selections are decided approximately 6 months prior to the mission launch date. For more information, please write:

Educational Activities Division
ARRL
225 Main St
Newington, CT 06111

School groups are always welcome to listen into a school group contact when a telebridge contact occurs. We had several schools listening to the Mars, PA contact. For more details on how to listen in through the telebridge, please contact the ARRL at the above address or Frank Bauer, KA3HDO of AMSAT. His e-mail address is ka3hdo@amsat.org

The next SAREX flight, STS-59 is scheduled for April 7. It will be a high inclination (57 degree) mission with voice and packet on-board.

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

Mode-B : MA 0 to MA 90 |
Mode-BS : MA 90 to MA 120 |
Mode-S : MA 120 to MA 145 |<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0
Mode-B : MA 180 to MA 256 |
Omnis : MA 230 to MA 30 | Move to attitude 240/0, Apr 04
Poor Sun angle and battery testing need maximum OFF time.
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current FO-20 operating schedule:
From January '94 thru March '94, the analog mode and the
digital mode will be on alternately for a week at a time.
ANALOG MODE:
23-FEB-94 8:05 -TO- 02-MAR-94 6:40 UTC
09-MAR-94 7:05 -TO- 16-MAR-94 7:30 UTC
23-MAR-94 7:52 -TO- 30-MAR-94 8:15 UTC
DIGITAL MODE: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

AO-16: Operating normally. [WH6I]

LO-19: Operating normally. [WH6I]

KO-23: Up and running. All appears to be back to normal. [WH6I]

KO-25: BBS is running. It appears that 145.980 MHz is the proper uplink
frequency and the downlink frequency is 436.500 MHz. There are a
number of images on the bird, some in a yet to be described format.
[WH6I]

POSAT: PoSAT is up and running. The processor seems very fast compared
to the other 9600 baud birds and faster through puts are common. A
note on the bird seems to imply that the "amateur experiment" will
be ending soon but no are details available. PoSAT has two uplink
frequencies: 145.925 & 145.975 MHz. The corresponding downlink
frequencies: 435.250 & 435.275 MHz. [WH6I]

IO-26: Is back up and running (1200 baud) and seeing a lot of use. [WH6I]

DOVE: Just a small correction on the address on where to send your DOVE
QSL and shortwave listener reports. PY2BJO reports that if you use
the "extended" zip code for his address, your QSL cards and reports
will arrive sooner. For completeness, his address is as follows:
Dr. Junior Torres De Castro (PY2BJO), 119 Rua Macaubal, Sao Paulo,
Brazil 01256-150. [PY2BJO]

RS-10: With the sudden rise of Solar Flux and 28 MHz open between W and G,
both RS-10 and RS-12 have been giving excellent downlink signals
when well below the user's horizon. GM4IHJ reports hearing the

satellites when over most continents, and DJ8DT reports hearing RS-10's 29.357 MHz beacon when the satellite was overflying Antarctica. Also, ZS6AOP is very active from grid location KG33WV and has made some spectacular contacts on RS-10. He invites all radio amateurs in the surrounding countries to listen for him on RS-10's 10M downlink. [G3IOR & ZS6AOP]

MIR: G3BGM heard MIR working IK1SLD on 144.450 MHz today 03-FEB-94 at 06:21 UTC. The theory about the use of this frequency by the MIR cosmonauts was to avoid clashing with the STS-60 operations. [G3IOR]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

1474. GAP DX EAGLE comments?

Hi,

I was wondering if anyone has had any experience with the DX Eagle antenna
which GAP makes. It is a smaller version which is roughly comparable
to the R-7. I have a lot of input on the Cushcraft, but not much
on this particular GAP model. Most of the info I have gotten involves
experience with the larger low band versions, and is negative.

Ohio/Penn DX Bulletin No. 147

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 147
BID: $OPDX.147
February 14, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, AD1C, W2JGR, K4CEF & Southeastern Cluster Group, WB5B, NL7TB N8AC and VE1CBK for the following DX information.

3Y0PI, PETER I ISLAND. As this bulletin was being prepared, reports indicate that the DXpedition team has worked over 50,000 QSOs. Monday, February 14th, will be the last night for 80/160 meter operations. Tuesday, February 15th, will be the last day for a full-time operations, if the schedule for the pick-up ship holds. The ETA for the pickup ship is February 17 or 18. This requires the team to start dismantling the base about 48 hours before the ship arrives (February 15 or 16).

9I, ZAMBIA. Holger/DL7VTM (NODXA member), Birgit/DG9WYL and Lutz/DL7VLA will arrive in Zambia on or about March 14th for a 3 week operation until April 7th. The callsigns that Holger, Birgit and Lutz will be using are 9I2Z, 9I2M and 9I2A, respectively. Their operations will be on all bands (including the WARC bands) and also operations on AO-13 satellite. This will be the first satellite operation from Zambia. All QSLs will go to Fritz, DL7VRO.

KP5, DESECHEO. AB4JI, KB4GYT, W4JKC, WA3YVN and VP2VE will be active from March 1-7. They will be on 10-160 meters, CW, SSB and RTTY; and possibly the RS-12 satellite. They will concentrate on the ARRL DX Contest, March 5-6. The callsign will be KP5/AB4JI. QSL via AB4JI. They are still looking for one more operator. Contact Robert, AB4JI, at 205-539-7665.

V3, BELIZE. Bobby, WB5B, and Mike, WA5TKC, will be active from February 19 to March 12 as V31BW and V31PP, respectively. They will operate from two locations, Bobby on South Water Caye (NA-080) and Mike in the rain forest area near Blue Creek. Mike will be operating 10-80 meters (SSB and RTTY) and Bobby mostly CW, 160-10 meters. V31BW will be active in both the ARRL DX Contests and the CQ WW 160 Meter Contest. QSL to home

calls. Both operators are providing video and data communications for the "Jason Project", headed by Dr. Robert Ballard (discoverer of the Titanic) in conjunction with the National Geographic Society. This will give school students in the U.S., Canada, Bermuda and the United Kingdom live educational "tours" from these locations.

VY1AU, HERSCHEL ISLAND DXPEDITION. Northern expeditioners will activate Herschel Island in the Beaufort Sea for the first time in Amateur Radio history. They will use the callsign VY1AU. The group will leave July 23rd from Inuvik where they will charter a float plane for Herschel. The team will be leaving the island on the 28th. Their 5 day operations will take place from Pauline Cove, a safe harbor on the east side of the Island. Herschel Island is the Yukon's first territorial park, complete with historic buildings and graveyards. Perched on the arctic edge of North America, Herschel's southern shore faces the mountainous Yukon mainland while the north shore is brutally exposed to the Arctic Ocean. The Island, 9 miles by 5 miles by 600 feet high is a mere six-tenths of a mile off the Yukon coast and accessible from mid-May to mid-September by boat or float plane. They hope to have two stations operational from a park building and use their generator. The Herschel Island DXpedition team: Bill/VY1AU, Brian/VY1BE, Richard/N6IV/KL7, Larry/KF6XC, Carl/VE8CF and John/NL7TB will handle the logistics/QSL manager duties. Operating SSB frequencies will be 21260, 14260, 14130 kHz and plus some activity on 40/80 meters. They will have a special event full-color QSL and also a video (VHS) tape of the whole event made available from NL7TB. QSL direct only to NL7TB.

XU, KAMPUCHEA. From the west coast statside, Sanyi, XU7VK, was heard active on 3522 kHz at 1524z, 7009 kHz at 1700z and one day on RTTY on 14083 kHz at 1705z. Sanyi will be active thru the end of February.

ZK1, SOUTH COOK ISLANDS. Seven members from the Glen Canyon Wireless Association will be active from Rarotonga, March 4-10. The group will also be active in the ARRL SSB DX Contest as ZK1AVY.

ZONE 2. Wayne, VE1CBK (CY0SAB), and Maurice, VE3YYR, will be active from February 22-28. Their main purpose is to operate in the CQ WW 160 Meter Contest, February 26-27. Before the contest they will be working all bands, but will concentrate on RTTY and SSB. They will also be on RS-12 satellite. QSL via VE3YYR. Wayne also mentioned that the CY0SAB cards are in the mail.

ZS9, WALVIS BAY. Ian, ZS9A, will be on 160 meters shortly before sunrise beginning February 14th. Look for him on 1815 kHz at or around 0400z.

ZY0SK AND ZY0SP, ST. PETER AND ST. PAUL ROCKS. After long delays trying to put these stations on the air, finally last weekend, the group ran into problems. Reports indicate that both stations lost their generators and had to resort to battery power. With battery power the group was only able to operate with 5 to 10 watts of power. This made them cut their operations short and they went QRT on February 11.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Commenting on Greg Bullough's tirade, Jeff Herman wrote:

>Can you imagine what your subscription/membership fees would be if QST
>didn't acccept advertising dollars?

From the audited financial statements for ARRL for 1992, in May 1993 QST:

The biggest revenue items in millions of US dollars: (the rest are peanuts)

Membership (incl accruals from life) 4.0
Pub Sales 3.7
Ad revenue 3.1

So ad sales represent 28.7% of revenue. So if we got the same
level of service, ignoring the savings from a slimmer QST, the
membership dues would have to rise to $38.60 per year. Not so bad.

However, I like the ads. So there.

>It is said that CW is the second most popular mode on HF, but scanning the
>bands I frequently count more CW QSOs than SSB QSOs.

yah!

1478. verifying subscription address

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-14 00:31:17 UTC
From: netguide@phantom.COM
Message-ID: <umoPHc2w165w@mindvox.phantom.com>
Source record: 271180

Is "ucsd.edu" the host site for those lists that were previously on the simtel20 site? Could you possibly verify the following addresses. I'd rather not subscribe and then have to unsubscribe. oh, by the way, it's for n update to the book Net Guide.

rec.radio.amateur.misc info-hams-request@ucsd.edu
rec.radio.amateur.packet packet-radio-request@ucsd.edu
rec.radio.amateur.policy ham-policy-request@ucsd.edu
rec.radio.info radio-info-request@ucsd.edu
rec.radio.shortwave swl-l-request@cuvmb.cc.columbia.edu

Thanks in advance. Of course, if you can only verify your list that too would be most appreciated.

--Kelly

RACESBUL.313 RELEASE DATE: February 14, 1994

Subject: MGT - Semantics - Coordinator 3/7

COORDINATOR. This is probably the most misunderstood word in this field. It is a common title in California but prohibited in Hawaii government. It appears that most coordinators are facilitators and have no authority. For those coordinators who indeed have authority to provide direction and control, we feel they should have another title. In the future we shall provide you a very illuminating article written by a newspaper reporter on the public confusion over the title coordinator. To add to the confusion, some coordinators are really planners who are neither facilitators or managers.

EMERGENCY COORDINATOR OR "E.C.": The title of a volunteer appointed by the American Radio Relay League, an association of Amateur Radio operators who sponsor a special interest group called the ARES or Amateur Radio Emergency Service. The ARES provides vital health and welfare communications and support to disaster relief agencies such as the Red Cross, the Salvation Army and others. In some cases an ARES EC may develop an agreement specifying that ARES people will "switch hats" to provide RACES support to a local government agency. Where the EC is the RACES Radio Officer it takes an exceptionally well qualified person not to confuse those two distinctly different roles: the RACES is only Public Safety communications and the ARES is predominantly public service. The title Emergency Coordinator is also used by some jurisdictions in another context and has no connection with Amateur Radio.

Not around here. 20db quieting is the minimum acceptable for links that I and my friends engineer; we prefer to get 'FULL' quieting out of a radio, which I have often measured at 30-40db or better. That means that an 8-bit system is barely enough, and I would prefer to see 10 to 12 bits were I designing such a system from scratch.

Making multi-hop analog links sound good is difficult. Digital would be the answer if the bandwidth were available.

NOTE: The Effective Sunspot Number for 12 FEB 94 was 24.2.
The Full Kp Indices for 12 FEB 94 are not available.
The 3-Hr Ap Indices for 12 FEB 94 are not available.

SYNOPSIS OF ACT

Solar activity was low. Two C1 x-ray events were
observed this period; the first was correlated with a SF flare
from Region 7668 (N08W17) with a maximum at 12/2346. Since the
flare, 7668 has shown some decay, particularily in the trailer
portion of the group. The second C1 event began at 13/0051Z,
maxed at 13/0244Z and finally ended at 13/0429Z. It was
optically uncorrelated. Culgoora reported a Type IV sweep with
start and end times at 13/0159Z and 13/0234Z respectively. One
new region was numbered this period -- Rgn 7671 (N11E75).

Solar activity forecast: solar activity is expected to be
low. Rgn 7668 and Region complex 7670 (N09E60) and rgn 7671
all have the potential to produce C-class activity.

At middle latitudes, the geomagnetic field has been mostly
unsettled to active with some minor storm conditions reported
during the past 24 hours. High latituds conditions have been
at mostly unsettled to minor storm levels with some stations
reporting major to severe storm conditions.

Geophysical activity forecast: the geomagnetic field is
expected to persist at mostly unsettled to active levels with
periods of minor to major storm conditions likely. Conditions
are expected to moderate to mostly unsettled on day three of the
forecast period.

Event probabilities 14 feb-16 feb

Class M 05/10/15
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 14 feb-16 feb

A. Middle Latitudes
Active 35/25/20
Minor Storm 15/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 40/30/25
Minor Storm 25/10/10
Major-Severe Storm 10/05/01

HF propagation conditions persisted below-normal over all
regions. Hardest hit continue to be the upper middle to polar
latitudes where occasional near-useless propagation conditions
have existed at some times of the day. No significant changes
are expected over the next 72 hours, although a very gradual
trend toward improving conditions is expected, particularly
after approximately 15 or 16 February. High latitudes will
require several additional days to recover from this rather
influential disturbance.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the

x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1485. Commercial Radio License Exam Opportunity ** Cambridge MA ** 12 March

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-14 09:43:29 UTC
From: w1gsl@ATHENA.MIT.EDU
Message-ID: <2jnh41$qoh@senator-bedfellow.MIT.EDU>
Source record: 271187
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sci.electronics,rec.boats

** MROP and GROL exams in Cambridge MA ** Sat. March 12th 1994 **

The MIT Radio Exam Team will conduct exams for the General
Radiotelephone Operators License and the Marine Radio Operators
Permit. The exams will be held at 10AM Saturday March 12th
in Cambridge MA at 77 Mass Ave in MIT Room 1-150.

A regular schedule of exams is planned for Cambridge MA. on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil.

Copies of the question pool are available from the Government
Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the moment.
A few copies are available for pickup in Cambridge.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international
radio services. A Maritime Radio Operators Permit is required to
operate radiotelephone stations aboard large ships and certain
aviation and coast stations.

At a later date exams will be available for the Commercial Radio
Telegraph operators licenses and the Global Maritime Distress and
Safety Systems (GMDSS) licenses. Amateur Extra Class operators may
be particularly interested in obtaining a commercial telegraph
license as they will receive credit for the 20 WPM 2nd class code exam.

The MIT Radio Exam Team operates under the auspices of the
National Radio Examiners COLEM, part of the W5YI group.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: In article <bote.760946660@access1> bote@access1.digex.net (John Boteler) writes:
: >I have gotten a bug up my rear to configure our point-to-point
: >repeater linking system with digital paths ranging 20
: >to 40 miles apart.
[deleted]
: Well lets look at some numbers and see. Lets assume
: you want "broadcast" grade audio. That's a SNR of
: 50 db. Digital transmission regenerates bits so
: that above a certain threshold level the effective
: SNR is only the quantization error of the digital
: equipment itself. A crude way of looking at this
: is to consider this error as bit jitter at the lsb-1.
: So an 8 bit system would have a SNR of 10*log(2^9)=27 db.
: That's obviously not good enough. 16 bits yields a SNR of
: 10*log(2^17)=51 db which is close enough for our purposes.

Use 20*log(x), since we're talking about a voltage ratio. An easy rule
of thumb is 6 dB of SNR per bit of quantization. It's actually a tad
better than that, since the quantization error is not constant;
sometimes the error is a small fraction of one LSB, sometimes it's up
to half an LSB. 8 bits will give you about 50 or so dB of SNR.

: Now the Nyquist limit says we have to sample at a minimum
: of twice the highest frequency in the audio. If we assume
: that's 5 kHz, then our minimum sample rate is 10 kilosamples
: per second. That requires a very good brickwall filter, however,
: so sampling is usually done at a somewhat higher rate, say 3X
: or 4X the highest audio frequency. Lets pick 3X. So our required
: bit rate is 16*15,000=240 kb/s. That's not going to fit in a
: normal FM two way radio bandwidth, so we're going to have to
: resort to trickery.

Yes, you sample at that higher rate, but then you digitally filter with
a near-brick-wall filter and reduce the sample rate to very near the
Nyquist rate, via decimation. (Consider compact disks.) At the
receiving end you interpolate to raise the sample rate back to
something that can use reasonable reconstruction low-pass filters. So,
a more realistic analysis gives a transmitted 10 kHz sampling rate at 8
bits per sample, for 80 kbit/s.

: Codecs use various compression schemes to lower the effective
: bit rate. Delta modulation is one such trick, and LPC (linear
: predictive coding) is another. These are effective real time
: compression methods, but do suffer some artifacts. Or we can

: take a page from the newer high speed telephone modems and use
: LZW type on the fly lossless compression and complex modem
: encodings that use less than one baud per bit. Off the shelf
: modems can deliver up to 56 kb effective data throughput over
: voice grade channels wsing a base baud rate of 600 baud. That's
: not quite good enough though.

Even if you could make that degree of m-ary coding work on a radio
link, which I have my doubts about.

: Or we can abandon voice grade radios for the links and use purpose
: built digital radios with higher baud rates. If we take a 56 kb
: WA4DSY RF modem (GRAPES), and couple that with an on the fly
: compression scheme like LZW, we can easily get the required 240 kb/s
: throughput for broadcast grade audio without dealing with the timing
: artifacts of delta modulation or LPC. Occupied bandwidth would be
: less than 70 kHz.

In my experience, LZW doesn't compress speech all that well. You'll be
lucky to get a 2:1 compression; you certainly won't get 4:1. Worse, you
won't get that compression consistently. Some parts of the transmission
will be compressed more than others, leading to timing/buffering
problems. You really want a compression scheme that is tailored to
speech.

: If we can settle for less than perfection, however, Motorola has
: a codec scheme that they claim can fit a digital voice signal in
: the same bandwidth as a NBFM voice signal, IE 20 KHz. It won't
: work through off the shelf FM radios though, a purpose built
: radio is required, and it won't yield "broadcast" SNRs. I have
: the write up on it around here somewhere, but can't lay my hands
: on it right now. I seem to recall that its an 8 bit system so
: the SNR is going to be around 27 db. It should be noted that hams
: consider the 20 db quieting level "full quieting" and thus perfectly
: acceptable audio quality.

8 bits is entirely adequate (see above). I'm not familiar with the
Motorola system, but I suggest that it is probably *not* using a
lossless compression scheme. That means that you'll experience some
additional noise/distortion, beyond quantization noise.

: >I just received a catalog from Consumer Microcircuits
: >Ltd in the U.K. listing a CVSDM codec. I remember
: >playing with these in electronics lab in college;
: >would these provide a narrow enough digital signal
: >to shove through a radio system designed for 5KC
: >bandwidth given a band-limited audio input to the
: >codec?

: I don't know this codec. What are the specs? Note that
: typical telco "voice grade" codecs have a bit rate of
: around 16 kb/s by use of aggressive coding schemes.

: Using MSK methods, that could be transmitted in a
: 22.4 kHz channel. But they won't deliver the "broadcast"
: grade audio you apparently want.

I've done some playing with MX-COM's CVSD codec. While I haven't analyzed the SNR, "by ear" it produces reasonable reproduction at 32 kbit/s and audio I can stand to listen to (barely) at 16 kbit/s. At 64 kbit/s, its audio is entirely acceptable for amateur purposes. IMHO.

but I was convinced to do so by others. Here are my comments

JWA= Jack Albert
RWM= Pobert W. McGwier

RWM

Howdy:

In a recent spate of messages, we have been told of the capabilities
of the hamblaster. It sounds rudimentary so far but I am sure that
over time the capabilities (new software development) will proceed
and its capabilities will be enhanced and it will make a very
interesting tool for amateur radio communications, experimentation,
and learning DSP. There will be alternatives as you will now be told.

JWA

For future expansion, the Hamblaster has an expansion connector.
Several add-ons will include, a better A/D-D/A, Packet switch,
real time tuning scope display driver and a microprocessor.

RWM

In other messages, John Alberts has told us of the lack of capabilities
of the Sound Blaster 16 with ASP. He is WRONG.

JWA

Not really, because I own one, I was refering to the
Soundblaster Pro. Any referances to the ASP version
was based on information from the "Ultimate Soundblaster
Book" that I purchased from a local book store. I was
unaware and the book didn't mention it's programming
capabilities. I believe my actual words where
"Im not shure but" .

RWM

I received my Sound Blaster developers kit via UPS yesterday at
last. It is easy to see how John could have made the mistake
he made. The manuals received in the kit describe two distinct

pieces of processing hardware. One is called the DSP and the
other is the ASP.

The DSP has all the limitations mentioned by John in his statements
concerning the capabilities of the Sound Blaster card (or lack thereof).
It is a proprietary gate array surrounding masks from other chip
developers to do stuff like DMA blocks of samples in and out, to convert PCM
to u-LAW, 2 or 4 bit ADPCM, CVSD, etc. It directs the flow of
MIDI commands, etc. It is a pretty neat thing in and of itself
but it is NOT what we want. We want a full blown DSP chip, with
a modified Harvard architecture and at least 16 by 16 bit -> 32 multiply,
accumulate, read new coefficient and data in one instruction time.
THE ASP is a real DSP chip and has all this. It is 512 words of off
chip program memory, 512 words of off chip data ram, 192 words of X RAM
on chip,128 words of Y ram on chip.

JWA

The Hamblaster comes with 32K of program/data memory.
It will be expandable to 32k of program and 32k of data
memory with a total os 64k words. More than you'll ever need!

Our packet modem software is 3K. It just won't fit in the
Soundblaster ASP 16.

X ram is program and sample data, Y RAM would be used for
filter coefficients. THIS IS A FULL BLOWN DSP CHIP. It
does NOT have the limitations John has told us the hamblaster
overcomes.

Indeed, on the A/D, D/A front, it is quite clear that the under
$300 SB16-ASP is quite a bit MORE CAPABLE than hamblaster.

JWA

New information places the Hamblaster at about $275.00

RWM

It has two channels (16 bits each), D/A, and A/D.
The sample rate is completely controllable by uploading a divisor to
the control register. The lowest available rate is 5 Khz and the
highest is 44.1 Khz. The processor runs at 12 MIPS so filters would
execute at around 25 MIPS. This is because it has the typical DSP
feature of multiply two numbers, read the next two, and accumulate the
last result while shifting the pointers in two instruction times.

JWA

That's great for HiFi work but for Ham use you only need an
8kHz sample rate and an 8 bit D/A-A/D. If you consider pipe-
lining the C25 also about runs 25 MIPS.

RWM

That is plenty fast. I will be able to do dual channel modems for this card. Since the thing does not also have a UART, or SIO, we will have to the HDLC and UART functions on the chip when required. Other DSP developers have done this all on chip (Finland DSP development group on the Motorola DSP56001). We will be able to do a lot.

John should be more careful when he makes flat statements about commercially available products. If he were a `real competitor' of Creative Labs, he could get into a bit of a hassle.

JWA

There's no way that a product made for Ham Radio will compete with a product that will sell in the millions. In the Ham market there just aren't enough sales to generate a reasonable profit! You'll never get rich selling to Hams.

RWM

I told John in a reply to his mail that I doubted the accuracy of his statements on the Sound Blaster16 with ASP. I was correct.

JWA

Not really. Because of the proprietary nature, I can't disclose the full picture. When it's released, A complete package update will be available.

RWM

The Sound Blaster 16 with ASP is available from many places for under $300. The developers kit is $99, available only from Creative Labs.

I think the Hamblaster's price will be competative! They will offer help to third party programmers.

I will be writing programs for the ASP and giving them away on your favorite ftp sites and through the ARRL download request service. These programs will be the basis of articles for QEX describing the algorithms and the operation of the sound blaster card in amateur radio applications. Phil Karn has devised a new link layer for packet, with FEC, etc. and I will be providing modems that use the ASP. I believe I can provide what the latest hamblaster announcements state and more in short order after I get the assembler for the ASP. I will do this as quickly as possible. I am a bit miffed that I stopped developing the Windows and DOS front ends and display stuff for the SB16 ASP after John's note because I thought the SB16 was too limited. Now it is full steam ahead.

JWA

Good Luck!

Programs for the Hamblaster will also be available on public domain disk or BBS's.

DX Bulletin 9 ARLD009
From ARRL Headquarters
Newington CT February 10, 1994
To all radio amateurs

SB DX ARL ARLD009
ARLD009 DX news

The items in this week's bulletin are courtesy of Steve, W9NUF; the Northern Illinois DX Association; Ed, KB7E; and the Ohio/Penn and Yankee Clipper Contest Club PacketCluster networks. Thanks.

PETER FIRST ISLAND. 3Y0PI has been very active and should remain so until about February 19. DXers bemoaning the tough winter of 1994, check this out. Last Saturday 3Y0PI had to QRT for 12 hours due to a storm that battered the team with 80 MPH winds and dumped five feet of snow on them. And this is during the Antarctic SUMMER/FALL.

Although some equipment was damaged, the team has made well over 20,000 Qs, more than 20 percent of their 100 Kilo-Q goal. Listen for them on CW, SSB, AmTOR, PacTOR and satellite. EME operations should commence soon. QSL CW via KA6V, SSB via AA6BB.

LACCADIVE ISLANDS. Geology students VU2STG and his newly licensed XYL are on an exploration and study assignment. During free time they operate VU7LI on SSB only. Please be patient as amateur radio is not the primary purpose for their visits to the Laccadives and equipment is minimal. QSL via VU2STG.

SOVEREIGN MILITARY ORDER OF MALTA. According to Luciano, I0JBL, the 1A0KM operation has been rescheduled for sometime in late February.

ANGOLA. D2EGH can be found on 14225 kHz at 2000z. QSL via CT1EGH. Listen for D2/AA4HU on 14225 kHz at 1745 and 2000z.

BANGLADESH. S21AM has been worked on 14185 kHz SSB at 1200z. QSL via Manju, PO Box 4000, Dhaka.

ETHIOPIA. ET3RA has been on 21250 kHz at 1600z. QSL via HB9CVB. ET3YU works CW on 14035 kHz between 1600 and 1700z.

ISRAEL. For the past two nights, Chicago area hams have worked 4X4NJ on 1832 at 0420z.

MAURITIUS. Jacky, 3B8CF, is a relatively easy catch on both 80 and 40 meters. Try 3506 kHz at 0200z and 7007 kHz at 0420z.

QATAR. A71BH can be worked on 14215 kHz around 1300z. QSL via OH6EEG.

FRENCH POLYNESIA. Walter, DJ0FX, is active as FO0PT from Moorea Island of the Windward Group, IOTA OC-046. This one should be on until February 19. Walter operates on all bands, mostly CW. Check the low end of 40 meters between 0730 and 1000z. QSL via the DARC Bureau.

SAN ANDREAS ISLAND. HK0/K1WGM has been worked on 160 meters around 1833 kHz at 0430z. Also check 80 meters on either 3505 or 3510 kHz between 0400 and 0600z. QSL K1WGM.

CAMBODIA. An operation by Laszio, HA0HW, is slated to begin in early April. The call signs XU9XA and XU0HW have been mentioned.

COSTA RICA. An operation is planned for February 17, 18 and 19 from Guanacaste Island, a new IOTA island off the northwest coast. Call signs will be K5MK/TI7 and TI2WLE/TI7. Try 14260 and 21260 kHz for SSB, and 40 kHz up from the bottom edge for CW. QSL via K5MK.

THIS WEEKEND ON THE RADIO. Indoor sports this weekend include the North American Sprint, Phone; the EA RTTY Contest; the New Hampshire QSO Party; and the YL OM Contest. For more information on these events, check pages 127 and 128 of January QST.

Propagation Forecast Bulletin 6 ARLP006
From Tad Cook, KT7H
Seattle, WA February 11, 1994
To all radio amateurs

SB PROP ARL ARLP006
ARLP006 Propagation de KT7H

Conditions have been severely disturbed since February 6 due to a flare a few days prior. Recurring coronal holes are keeping the geomagnetic field jumping and this may continue for a few more days. HF propagation has been disrupted and may not quiet down until after mid-month.

Solar flux is rising, and should peak near 120 around February 22. Flux will probably remain above 100 until March 6.

Sunspot Numbers from February 3 through 9 were 62, 75, 76, 71, 72, 85 and 64, with a mean of 72.1. 10.7 cm flux was 97.9, 95.3, 93, 95, 95.9, 95 and 101, with a mean of 96.2.

The path projection for this week is from Dallas, Texas to Tonga. This is for February 15, assuming a flux of 105.

80 meters looks good from 0600 to 1330z, and 40 meters from 0530 to 1400. 30 meters should open from 0530 to 1500 and 20 meters from 0400 to 1030, with a possible additional opening around 1430. 17 meters should be good from 1730 to 0200, and 15 meters from 1800 to 0030. 12 meters should be open from 1900 to 0000, and 10 meters from 2000 to 2300.

The following is a QST

The ARRL petitions for an lifetime ham radio ticket and a court says that a ham does have a right to a tower and antenna.

*****
LIFETIME HAM LICENSE PET

The ARRL has petitioned the FCC to make Amateur Radio operator licenses valid for life. The League says in its petition that there is nothing in the Communications Act of 1934 that would prevent such a license term for radio amateurs. It wants a lifetime operator's license to allow inactive amateurs to return

to the Service at the same class of license without the necessity for retesting.
This proposal will apply only to operator licenses, Amateur radio station licenses would still, by law, be limited to a 10-year term. A person with a lifetime operator license but no station license would not be permitted to operate a station of his own but would be able to operate from the station of another amateur. The League says that nothing in this proposal should have any effect on the FCC's call sign issuance program either as it currently exists or as proposed in the vanity call sign program.
The ARRL says that it is not proposing at this time to make this rule change retroactive. Rather it suggests the easiest way to implement it is simply to extend currently held operator licenses from 10 years to life. No rule making number has yet been assigned to this ARRL regulatory change request.

*****
TOWER VICTORY

A federal appeals court has found in favor of a Minnesota ham in the latest round of her three-year battle to install a tower and antenna.
Back in January of 1991 Sylvia Pentel, N0MRW, applied to the city of Mendota Heights for a zoning variance for a 68-foot crank-up tower. At the time, she was using a roof-mounted vertical which she was unaware, violated the city's zoning rules. The city denied her application for a tower but did grant Pentel a special-use permit to allow her to keep the vertical.
But that did not satisfy N0MRW. Pentel sued the city in U S district court. Her attorney John B. Bellows Jr, K0QBE argued that the ordinance restricting her tower and antenna was preempted by federal law. A law known as PRB-1 which recognizes the needs of both municipalities and amateurs radio operators. A law which requires a reasonable accommodation of the needs of radio amateurs.
When the district court found in favor of the city Pentel appealed. It was the United States Court of Appeals for the 8th Circuit that has now ruled that in establishing PRB-1 the FCC was attempting to strike a balance between the interests of municipalities and ham radio operators. The court noted that granting a special-use permit for Pentel's vertical was not an acceptable accommodation to the radio amateur under the terms of PRB-1 and ordered the city to try again.
The court did put some limit on its decision. It said that its finding does not mean that the city must necessarily grant Pentel's application for a tower as it stands. Rather, it stated the Mendota Heights Minnesota must make a reasonable accommodation to insure her interests as a radio amateur are protected.

*****
VAN SICKLE

A United States District Court in Texas has written the end to the story of Terry Van Sickle, WB5WXI by sentencing him to 90 days of home confinement, three years probation, fining him one thousand dollars and ordering that he undergo a group counseling program as directed by the probation office.
Van Sickle is the WFAA television news cameraman who had been accused by the Federal Bureau of Investigation of harassing customers at a Mc Donalds restraint drive-thru window last summer. He initially protested his innocence to the media. One newspaper even ran a two column feature about Van Sickle, quoting him as saying that the frequencies used by Mc Donalds are posted on computer bulletin boards and anyone could have been responsible.
But on October 18th Terry Van Sickle changed his story. He pleaded guilty to one count of violating Title 47, section 333 of the United States Code by willfully and maliciously interfering with radio communications. Sentencing was set for early January. At that time he faced a maximum term of a year in prison and $100,000 fine.
The lighter sentence of 90 days home confinement and probation falls under federal sentencing guidelines. It is mitigated by the fact that Van Sickle has also lost some fifteen thousand dollars worth of scanners, two-way radios and other gear that was confiscated at the time he was detained.
Van Sickle's troubles may not be over yet. There is every likelihood of FCC administrative action to strip him of any federally issued radio licenses. There is also the possibility of civil action against him by Mc Donalds Corporation to recoup any losses incurred as the result of his jamming of their radio system.

*****
QUAKE

Amateur Radio Emergency Service and Radio Amateur Civil Emergency Service operators are still involved emergency communication in the aftermath of last weeks 6.6 magnitude earthquake in Los Angeles' San Fernando Valley. Even though most normal lines of communications were restored within 48 to 72 hours, ham operators are still assisting police, fire, Red Cross and local emergency management officials with disaster assessment using local VHF and UHF communications.
As a result, all hams in the affected areas not involved in the emergency communications effort have been asked to give priority to meeting these emergency communications demands. These hams should not transmit on emergency net frequencies, except when directed to do so by net control stations. Also, priority is being given to outgoing messages since most amateurs in some affected areas are still unable to deliver incoming

messages until phone service is restored and roads are repaired. Health and welfare traffic was not accepted from the public until authorities in the affected areas indicate they are able to process such inquiries. Some emergency net operations are expected to continue for at least another two weeks.

*****
ARRL SAY NO TO NJ RADIO TAX

Officials of the American Radio Relay League have told the New Jersey Department of Environmental Protection and Energy that a state proposal to register and impose fees on radio transmitters and other RF sources was contrary to federal law. At least as the law is related to radio amateurs.
As reported several weeks ago, the New Jersey proposal exempted Amateur Radio stations at this time but leaves a door open for future regulation of hams and imposition of fees.
But ARRL General Counsel Chris Imlay, N3AKD says that only the FCC has the power to license and regulate radio transmitters.
Imlay says that applying the proposed regulations to amateurs would effectively preclude Amateur Radio communications in New Jersey.
By the way, the New Jersey Department of Environmental Protection and Energy has extended the deadline for comments on the proposal until February 22nd. Hams in New Jersey and the surrounding states are being encouraged to write the New Jersey legislature in opposition to the radio tax proposal.

*****
SAREX STS-60

This word just in. There will be three ham radio-licensed crew members aboard Space Shuttle Discovery, STS-60, scheduled for launch February 3rd. Commander Charles Bolden, KE4IQB, and Mission Specialist Ronald Sega, KC5ETH, have now received their Technician Class licenses. The third licensed crew member is Russian Cosmonaut Sergei Krikalev, U5MIR who is a Mission Specialist on the STS-60 SAREX flight.

*****
DX

In DX, word that The Lambda Amateur Radio Club will sponsor it's third DXpedition from March 5th to the 10th. Larc members are planning to operate on HF and OSCAR-13 Mode B and Mode S from the Caribbean island of Anguilla in British West Indies. The operators making the trip will be Jim Kelly KK3K, Don Bledsoe WB6LYI, Mark Wilcox KC3XC, Tom Hendrix KI4ZN, Howard Wyman W9BVD, Norm Gray KF7IK, James Keeth AF9A, and Wayne Schuler AI9Q. QSL for all operators is direct to their respective current Callbook addresses. By the way, this may be the first OSCAR-13 Mode S DXpedition for the record books.

*****
QRP-DX

Also, two QRP Nets located in the Pacific Northwest are now
available to help you to meet other low power enthusiasts
throughout the country. The North West QRP Club meets every
Monday evening at 03:00 UTC on 10.123 MHz. The Northwest QRP
Club Saturday morning Net can be found at 07:30 UTC on 3.561
MHz. If you are interested in receiving a free copy of their
NWQ Newsletter, please send a SASE to Bill Todd 4153 49th Ave.
Southwest, Seattle, Washington 98116.

*****
NAT

Two ARRL National Exam Days have been set for 1994. The
dates are May 14 and October 29. Details will be in February
issue of QST

*****
DOOB

A ham who ran last Novembers' New York City Marathon to
raise money for cancer research will be doing it again on the
west coast. Fred Doob, AA8FQ has announced that he will run in
the March 6th Los Angeles Marathon and will be on the air before
and during the race.
With backing from Icom America, Doob says that he will hold as
many QSO's as he can while running the course. He says he plans
to operate repeaters on 145.200, 146.925, 445.325 and 447.235
MHz. Fred will also try his luck on the national simplex calling
channel of 146.52 MHz. His frequency coordination is being
handheld by the Baldwin Hills Amateur Radio Club and if band
conditions warrant, he may try some 20 meter remote base
operation on 14.295 MHz as well.
AA8FQ's participation in the New York City Marathon raised
approximately $2500 that was donated to the Sloan Kettering
Memorial Cancer Center. This time the proceeds of sponsored
miles will benefit the Los Angeles Childrens Cancer Research
Fund. This organization is considered one of the leading
pediatric cancer research organizations in the country.
Hams interested in sponsoring miles to be run by Fred can
contact him at area code 216-721-2466. In the meantime, Newsline
wishes Fred Doob AA8FQ good luck in his next run to save lives.

The following is a QST

When the information super highway arrives, ham radio will be riding on it at the front of the pack. So says a high ranking FCC official on Newsline report number 861 coming your way.

*****
INFORMATION SUPER HIGHWAY

Ham radio definitely will play an important part in President Clinton's information super highway. So says FCC Private Radio Bureau Chief Ralph Haller, N4RH. Speaking on Saturday, February 5th at the 1994 Tropical Hamboree in Miami, Haller told the group that it's the inventive nature of radio amateurs that makes them

so important to the emerging information flow.

"The amateur service, I think is going to play a major role in the information super highway and the advancements that come online in the future. You're the people that have the practical knowledge of communications. You're the people that have come up with the innovative networks. Your packet data systems that are now very common in the commercial world.
I guess what I am saying to you is, while I am not particularly concerned about any more of your frequencies being in jeopardy at this time, because there is no plans for that. I am concerned that you continue to move forward and keep pace with the commercial side, so that the technologies you have on the air will in fact provide you all of the kinds of feature rich functions that are going to be available to the general public. In fact you ought to have even more features because you are more qualified, you know what else is available besides just a device that can only be operated by someone that is not sophisticated in communications. It is an exciting time. I hope you share that view with me. Because it really, I think, is going to make a difference in the way we live in the future." FCC Private Radio Bureau Chief, Ralph Haller, N4RH.

Haller also took note of the success of the expansion of public service activities as a result of the FCC action to change its rules governing business communications. N4RH singled out the recent New York City Marathon as a primary example of the ham radio success brought about by this regulatory change.

"I recently had the opportunity to visit the New York Marathon. And to watch how amateur radio communications actually made that event occur. Without it, it would not occur. It is hard perhaps, to think about, to believe that the city of New York Police Department is unable to communicate over the entire 26 miles of that marathon. The only communications that worked over the entire 26 miles of that race was the amateur communications. The amateurs provided medical support, provide physician information, provided a whole host of communications capabilities. In fact it goes so far as to this. It was an amateur radio transmission that in fact signaled start the race. It wasn't on police radio, it wasn't on anything else, it was amateur that was the only communications capability that provided an instant notification to everyone in all parts of that race. Pretty amazing what you people have done." Ralph Haller, N4RH.

N4RH says that this one rules change has forever expanded the public service abilities of the ham radio community.

*****
ARRL SAYS NO TO RF STANDARDS

The ARRL has told the FCC that a proposal to adopt new standards for exposure to radio frequency radiation should be terminated.
The League says that the proposal, which would change the Commission's guidelines to match those adopted by the American National Standards Institute and the Institute of Electrical and Electronic Engineers in 1992, was premature. It also asserts that the commission has an obligation to introduce this matter as an FCC notice of inquiry to allow a wider range of commentary.
The ARRL claims that the proposed standards were not properly delineated and not a proper basis for evaluating communications facilities. It also said that an FCC Report and Order in 1987 that concluded that amateur stations should be exempted from such RF exposure guidelines, because amateur stations operate only intermittently, and at low power levels, still applies. Only rarely, the League said, would amateur stations even exceed the proposed, more stringent 1992 standard.
The League wants the current FCC proceeding terminated in favor of more study by a more appropriate government agency, such as the Environmental Protection Agency. If not, then it says the obligation of he FCC is to issue a notice of inquiry.
The current proposal, in ET Docket 93-62, was made in the spring of 1993 and its comment deadline has been extended several times, most recently to January 25, 1994, based on a request by CBS Inc. The reply comment deadline is February 24th.

*****
SAREX

The STS 60 Shuttle Amateur Radio Experiment has successfully completed another first. At 10:42 UTC on February 6, Cosmonaut Sergei Krikalev, U5MIR, on board the space ship Discovery made contact with the House of Science and Technology for Youth in Moscow. This is the first time a cosmonaut on a U.S. space shuttle has communicated with a school group in Russia. Leonid Lebutin, UA3CR and Valery Agabekov, UA6HZ were the prime school coordinators for the contact. Six students were able to ask their questions to the crew on the Space Shuttle DIscovery. In addition, several cosmonauts were on hand to hear the communications and witness the event.

*****
SAREX PACKET QSL INFO

While voice contacts with the hams on Discovery have been scarce due to problems with the Wake Shield satellite experiment, the packet robot ham station has been quite busy. As we go to air just prior to landing, there have been several thousand automatic SAREX contacts made with hams from around the world reporting a booming packet radio signal from the shuttle.
For those of you who have heard or worked the STS-60 crew and wish to receive a QSL card you need to send your signal

report and an SASE or an envelope with International Reply Coupons to the QSL manager. This time its the ARRL. The address is STS 60 QSL, in care of the Educational Activities Division, The American Radio Relay League, 225 Main Street, Newington, Connecticut 06111.

*****
Anik E2 Lost in Space?

Still with satellite related news, word that Thursday January 20th was not a good day for Telesat Canada.
Within a 12 hour period they lost both of their $300 million geostationary satellites Anik E1 and E2. E1 was eventually recovered by switching to a backup momentum wheel but the E2 bird may be permanently disabled.
Both satellites are of the GE Series 5000 family of birds. Experts believe that electromagnetic disturbances in space may have caused the damage. Canadian radio and television broadcasting, telephone services, data carriers and even a national ham radio satellite repeater intertie have all been seriously affected. Some believe the transponder shortage will cause a rush toward the introduction of video compression on the surviving Canadian satellite. This would greatly enhance its throughput while at the same time making it unviewable by home satellite viewers.

*****
2 MET

Amateur Radio may have saved a life when Diana Carlson, KC1SP, used a local repeater to report a possible suicide attempt to police. Carlson, of Hudson, New Hampshire, was on her way to work in Concord, Massachusetts, the morning of January 10, when she and another motorist observed a man climbing the railing of the Merrimack Bridge. The man's auto was parked directly in front of Carlson.
While the other motorist talked to the man, Carlson first tried a call on 146.52, which she knew was sometimes monitored by the Westford, Massachusetts police. When no response came she switched to the 147.12 repeater in Billerica. There, Larry Garneau, N1QEZ, who was mobile, responded and passed the message to his wife, Virginia N1QFA, who telephoned police. An officer of the Tyngsboro Police arrived in time to pull the 27-year-old man from the railing of the bridge.
By the way, Diana Carlson comes from an all ham family. Her husband David is N1JYX, her son is KA1VWX, and her daughter is KA1VUA.

*****
STOLEN REPEATER

From England comes word that the GB3GF repeater operated by the Guildford UHF Repeater Group in England has been stolen. The radio gear was sited at Guildford near Surrey and was last heard on the air on December the 29th. Sometime between midnight and 8 am on the 30th, the entire installation was skillfully dismantled and removed from the site. The thieves even took the time to climb a fifty foot high tower to take the antennas as well.
The system was made up of a modified Pye Communications model F9U wall mounted base station, a Pye AE 450 F cavity filter and home made copper cavity circulator. It was crystalled to operate on the European RB 12 UHF repeater frequency pair of 433.300 MHz in and transmitted on 434.900 MHz. It also had an automatic Morse Code identifier of GB3GF every fifteen minutes.
While its doubtful that this machine will show up on North American shores, be aware that any leads in locating the repeater and those who took it are welcome. Any information should go directly to the Guildford Police Department. The telephone number from the United States is a long one. You dial 0114448 followed by the local number 331111. When you get an answer, ask for extension 3128.

*****
UK REPEATER DELINQUENCY

From the United Kingdom comes word that the Radio Society of Great Britain has issued an urgent advisory to twenty-four of that nations repeater trustees telling them to respond to a letter or loose the right to keep their systems on the air. This is because the British Radio Communications Agency abandoned the single repeater license to the RSGB and is now individually licensing each of the nations repeaters.
Actually, the RSGB repeater keepers license expired at the end of last November. Now the government has told the national society that it must have a letter requesting a Notice of Variation from each repeater license holder to keep the machines on the air. The society says that it has received all but two dozen of these requests, and it is urging the users of the repeaters that have not filed to urge the license holder to do so immediately. The RSGB says that its under increasing pressure from the Radio Communications Agency to let it know which repeaters have not filed for the required Notices of Variation. As far as the British Government is concerned, these systems are operating illegally without a proper license.

*****
PSA

The ARRL has some new Public Service Television commercials available to its Public Information Officers and Public Information Coordinators. The tapes feature astronaut Linda Godwin, N5RAX, and Nobel Prize-winning physicist Dr Joel Taylor, K1JT. The full-color PSA's include testimonials from Godwin and

Taylor in varying lengths for both commercial and public-access television use. Be sure to specify videotape format required by television station or cable television system when placing your order. If you are not certain, we strongly suggest that you call the TV station or cablecaster and ask what type of videotape they require.

*****
PSA TAPE FORMATS

By the way, it may be time for a quick lesson on how to get a public service spot on the air. Let's start off by saying that its getting a lot harder to these spots aired these days. Only a few years ago, TV stations were happy to have them to fill the gaps in late night time slots where no commercials had been sold. The advent of the long format commercial called the infomercial changed all of that. Infomercials are known as time buys and they supplant individual commercials in a given period. As a result, free time for PSA's is getting scarce.
Complicating things further is the kind of videotape you must submit to a TV station. A decade ago, that too was easy. Big stations required 2" quad tape while the little ones would accept the then popular 3/4 inch U-Matic. But its not that way anymore. Now a days commercials and PSA's are run by automated machinery that use cassette format tapes. As a rule of thumb, television stations that make their own cassettes require any commercial to be delivered to them on what is known as 1 inch type C open reel tape. But with manpower cutbacks and the introduction of even more automation, that trend is changing too. More and more stations now require you to submit 1/2 inch Betacam SP cassettes that can be placed directly into their automated tape players known as cart machines. This saves the station the cost of having to transfer the original you supply to a cassette that will fit their commercial playback machine. A small number still accept 3/4" tape but that number is shrinking daily as U-Matic and quad is replaced by Betacam SP as the defacto standard.
Complicating matters further is that some stations; mainly those affiliated with the National Broadcasting Company may require your submitting the PSA's on the Panasonic M2 video format while some Tribune and independent stations utilize the new D2 digital 19mm videocassettes for their Ampex built ACR 225 cart machines.
The majority of cablecasters are a lot more lenient than commercial broadcasters but even here its not like it used to be. While some will accept the older 3/4" U-Matic cassettes the vast majority now are switching over to the Super VHS. That's Super VHS and not the home type VHS we have in our houses. Except for undercover news stories, VHS is not acceptable for over the air broadcast and is rarely used any longer in cable transmission. VHS cassettes are used only for viewing purposes in offices to

see if the material in the PSA or commercial is acceptable for air.

*****
DX

In DX, word that Walis Island as ZS9DX was to be active by operators ZS6BRZ and ZS6WPX, but there have been no QSN reports. To date, the only activity seen from Walis has been by ZS9A on 21.335 MHz at 14:00 UTC. ZS9A also frequents 10 meters at various times.

*****
FORM 610

This important note to any ham who contributes time as a Volunteer Examiner. Beginning March 1st the FCC will accept only the new version of its Form 610. Information about the new 610 is explained on page 103 of the February QST
Those hams who serve under the ARRL VEC have been assured of having the needed materials before the implementation date. The latest issue of their VE Express newsletter includes a full size version of the new Form 610 and the ARRL VEC has also mailed bulk quantities of the new form to all of its 650 plus field stocked VE teams. The ARRL VEC recommends that its VE teams begin using the new form on February 12 to allow for sufficient turnaround time.
The W5YI national VEC is also getting supplies of the new form out to its VE teams very quickly and should have them in place by the time this newscast goes to air.
Its not known what action other VEC's have taken to provide their VE's with the new Form 610 prior to its implementation date. If you are not an ARRL or W5YI VE, and have not been restocked with new form 610's by your VEC, consider requesting the new version to be sent to you from that VEC right away. If these VEC's will contact us with their plans, we will be happy to pass along the information in future Newsline reports.

*****
BOSWELL OBIT

It's no exaggeration to say that one Alabama ham radio operator has touched thousands of lives. But you probably won't recognize his name. Nonetheless, friends of Ken Boswell, KB4BWO, were saddened at the news of his death in early January. This man has been considered an inspiration in their lives.
If there is one point everyone that met Ken Boswell agrees about, it's the smile. He always had one.
"He tried desperately to look and find the good in situations." Ron Arap, N4PHP.
Ron remembers the man who worked hard to help students at Bessemer State Technical College. That's where Boswell taught

electronics courses.
"If the student was interested, and applies themselves, he would go out of his way to help them." Ron Arap, N4PHP.
Boswell setup an amateur station at the college to build interest in ham radio. He was active in the Birmingham Amateur Radio Club. At the school fellow instructor Clarence Johnson deals with the loss of a close friend.
"He cared about people. He was a people kind of person. As a matter of fact the memory that I will probably have that will linger with me about Ken is just how much he really showed he really loved humanity. He got along well with his students. Ken was just the kind of person that get along with anybody. Ken met no strangers." Clarence Johnson, fellow instructor.
In his nearly thirty years in vocational education. Ken Boswell thousands of people a powerful tool, knowledge to make their lives better.
A special tribute may be in the works to honor Ken Boswell. Friends and co-workers want to set up a scholarship fund in his honor. Ken Boswell was 57 years old.

>You never miss an opportunity to kick CW in the okole (Hawaiian word
>for what you sit on).

Then again, in this bigger, busier, faster, hurry-up world, we often miss the simple pleasure of spending a half hour passing the time on 15 Meter CW, at 7 WPM with a young (or old) novice for whom it's all so big and new. On a couple of watt transmitter and a DC receiver that cost me all of $35. ($35 HW-8s in perfect working order are, like lightning, something that the gods usually only bestow once, by the way.)

Okay, so I'm wierd. But I still think theirs something magical about tickling the ether with a simple signal on a cold night.

Then again, I'm in great company. :-)

CW is to SSB as fine cognac is to good beer. Both have their merits and pleasures, and both are acquired tastes. And it's okay to not care for either or both.

Greg

1496. Re: HAMBLASTER INCORRECT STATEMENTS

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-14 14:43:21 UTC
From: jwa@tellabs.com
Message-ID: <1994Feb14.144321.10990@tellab5.tellabs.com>
Source record: 271198

In article <N4HY.94Feb9140932@harder.ccr-p.ida.org> n4hy@harder.ccr-p.ida.org (Bob McGwier) writes:
>

I had some errors in my last post

I didn,t want to get into a "Point/Counterpoint" rebutal
but I was convinced by others to do so.

JWA= Jack Albert
RWM= Robert W. McGwier

RWM

Howdy:

In a recent spate of messages, we have been told of the capabilities
of the hamblaster. It sounds rudimentary so far but I am sure that
over time the capabilities (new software development) will proceed
and its capabilities will be enhanced and it will make a very
interesting tool for amateur radio communications, experimentation,
and learning DSP. There will be alternatives as you will now be told.

JWA

For future expansion, the Hamblaster has an expansion connector.
Several add-ons will include, a better A/D-D/A, Packet switch,
real time tuning scope display driver and a microprocessor.

RWM

In other messages, John Alberts has told us of the lack of capabilities
of the Sound Blaster 16 with ASP. He is WRONG.

JWA

Not really, because I own one, I was refering to the
Soundblaster Pro. Any referances to the ASP version
was based on information from the "Ultimate Soundblaster
Book" that I purchased from a local book store. I was
unaware and the book didn't mention it's programming
capabilities. I believe my actual words where
"Im not shure but" .

RWM

I received my Sound Blaster developers kit via UPS yesterday at
last. It is easy to see how John could have made the mistake

he made. The manuals received in the kit describe two distinct
pieces of processing hardware. One is called the DSP and the
other is the ASP.

The DSP has all the limitations mentioned by John in his statements
concerning the capabilities of the Sound Blaster card (or lack thereof).
It is a proprietary gate array surrounding masks from other chip
developers to do stuff like DMA blocks of samples in and out, to convert PCM
to u-LAW, 2 or 4 bit ADPCM, CVSD, etc. It directs the flow of
MIDI commands, etc. It is a pretty neat thing in and of itself
but it is NOT what we want. We want a full blown DSP chip, with
a modified Harvard architecture and at least 16 by 16 bit -> 32 multiply,
accumulate, read new coefficient and data in one instruction time.
THE ASP is a real DSP chip and has all this. It is 512 words of off
chip program memory, 512 words of off chip data ram, 192 words of X RAM
on chip,128 words of Y ram on chip.

JWA

The Hamblaster comes with 32K of program/data memory.
It will be expandable to 32k of program and 32k of data
memory with a total os 64k words. More than you'll ever need!

Our packet modem software is 3K. It just won't fit in the
Soundblaster ASP 16.

RWM

X ram is program and sample data, Y RAM would be used for
filter coefficients. THIS IS A FULL BLOWN DSP CHIP. It
does NOT have the limitations John has told us the hamblaster
overcomes.

Indeed, on the A/D, D/A front, it is quite clear that the under
$300 SB16-ASP is quite a bit MORE CAPABLE than hamblaster.

JWA

New information places the Hamblaster at about $275.00

RWM

It has two channels (16 bits each), D/A, and A/D.
The sample rate is completely controllable by uploading a divisor to
the control register. The lowest available rate is 5 Khz and the
highest is 44.1 Khz. The processor runs at 12 MIPS so filters would
execute at around 25 MIPS. This is because it has the typical DSP
feature of multiply two numbers, read the next two, and accumulate the
last result while shifting the pointers in two instruction times.

JWA

That's great for HiFi work but for Ham use you only need an
8kHz sample rate and an 8 bit D/A-A/D. If you consider pipe-

lining the C25 also about runs 25 MIPS.

RWM

That is plenty fast. I will be able to do dual channel modems for this card. Since the thing does not also have a UART, or SIO, we will have to the HDLC and UART functions on the chip when required. Other DSP developers have done this all on chip (Finland DSP development group on the Motorola DSP56001). We will be able to do a lot.

John should be more careful when he makes flat statements about commercially available products. If he were a `real competitor' of Creative Labs, he could get into a bit of a hassle.

JWA

There's no way that a product made for Ham Radio will compete with a product that will sell in the millions. In the Ham market there just aren't enough sales to generate a reasonable profit! You'll never get rich selling to Hams.

RWM

I told John in a reply to his mail that I doubted the accuracy of his statements on the Sound Blaster16 with ASP. I was correct.

JWA

Not really. Because of the proprietary nature,
I can't disclose the full picture. When it's
released, A complete package update will be available.

RWM

The Sound Blaster 16 with ASP is available from many places for under $300. The developers kit is $99, available only from Creative Labs.

JWA

I think the Hamblaster's price will be competative!
They will offer help to third party programmers.

RWM

I will be writing programs for the ASP and giving them away on your favorite ftp sites and through the ARRL download request service. These programs will be the basis of articles for QEX describing the algorithms and the operation of the sound blaster card in amateur radio applications. Phil Karn has devised a new link layer for packet, with FEC, etc. and I will be providing modems that use the ASP. I believe I can provide what the latest hamblaster announcements state and more in short order after I get the assembler for the ASP. I will do this as quickly as possible. I am a bit miffed that I stopped developing the Windows and DOS front ends and display stuff for

the SB16 ASP after John's note because I thought the SB16 was too limited. Now it is full steam ahead.

JWA

Good Luck!

Programs for the Hamblaster will also be available on public domain disk or BBS's.

1499. Amelia Earheart was Codeless, unfortunately

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-14 15:22:57 UTC
From: rdewan@casbah.acns.nwu.edu
Message-ID: <2jo50h$9kt@news.acns.nwu.edu>
Source record: 271201

From: The DX reflector
Subject: Amelia Earhart
From: ron.chester@lst.spacebbs.com (Ron Chester)
Date: Sat, 12 Feb 94 23:30:00 -0800

Tonight I saw the last half of a PBS show on Amelia Earhart which I believe most DXers would find interesting. (I missed the beginning, so don't know the name of the program).

According to the show, Earhart did not especially like radio communication, and did not get properly trained up on radio navigation. For her final around-the-world flight in 1937, she left her Morse Code key at home, as she had never managed to master the code. She also did not take along the airplane's trailing wire antenna, which she found hard to use.

The trip was successful for the first 40 days, until they got to the most difficult leg, which was the long flight over the Pacific from New Guinea to Howland Island. The program asserted that the failure of this leg was primarily the result of the lack of radio expertise on the part of both Earhart and her navigator, Frederick Noonan. Among other things, there was confusion on their part about what radio frequencies to use.

The Coast Guard had the cutter Itasca stationed at Howland, ready to assist her in finding the tiny island. As she approached Howland, they picked up and logged her radio signals as she asked for help. She was circling all around the vicinity of her destination, but was unable to spot the island, while running out of fuel. The Itasca heard all of this clearly on their radio, and transmitted back to her over and over on three different frequencies. But Earhart apparently never heard the Itasca signals, and eventually disappeared into the QRN, never to be seen or heard from again.

It was a fascinating account. Catch it if you see it in your TV listings.

>printing and cursive writing. I decided to consult some experts.
>Michael A. Gauland gaulandm@tekig7.PEN.TEK.COM

Michael, I'm not a "high-speed CW op" but I can copy 60wpm in shorthand.
That's what I use for copying 15wpm code. Shorthand was designed for
keeping up with spoken words and works better than either printing or
script for copying CW. Each letter is only one stroke and strokes run
together in a smooth manner. There are also short forms of commonly used
words and I've invented a few new ones applying to Ham Radio.

73, Cecil, kg7bk (I do not speak for Intel on Internet)

wrong! the back of the HT (not the battery) is metal. That's the heat sink.

The Big Wheel was described in the ARRL VHF Manual a number
of years ago. I have an old copy (circa 1965) that has this
antenna and also the old halo mobile antennas in it. They
quit publishing omni-directional horizontally polarized antennas
when hams switched from AM-horizontal-simplex-mobile to
FM-vertical-repeater-mobile in the early 70's.

It's basically 3 loops a full wavelength long built like a
3 leaf clover. Much better than a halo, according to the book.
I think you drive the loops in parallel, but don't quote me,
I'm working from memory here.

> So how many of you think I am UTC by learning on a computer?

Steve, if you're learning for the exams, your only problem is going to be convincing the volunteer examiners to let you copy on a computer. You should check in advance, preferably bring your own laptop (or even a full-size computer if they'll have room for it) although a _few_ VE's have a computer for their record-keeping and may let you use it. Again it's very important to check in advance with the VE's. Some may not want to deal with it at all, others will be accommodating.

For real speed, you'll be 'way ahead. Someday I'm gonna sit down at the computer for several weeks and actually learn to type Morse from the air. Operative word there is _someday_ :-).

I remember hearing about a foot race somewhere across the desert in Southern California and maybe Nevada. It's run by a police agency as a fundraiser for some charity, I think. They have solicited amateur radio volunteers in the past, but I heard about it only after the event (and I don't remember where).

Does anyone have more information about this event?

(Sorry about the excessively broad distribution, but my news poster won't let me restrict it to just California.)

I built several many years ago. Scaled the design up from two meter designs.
Used half inch electrical conduit for the elements. They worked great, but are
long since gone.

I have used, for years, upper/lower-case printing for anything that takes putting text onto paper by hand. Never could write cursive! But what comes out tends to have characteristics of cursive writing without the connecting lines.

As a result, I can write lower-case print-style characters without thinking about them, so that's what I use copying code. I think the real key _is_ using something you don't have to think about, because stopping to think about any aspect of your copy slows you down. (Again why I can't copy on a typewriter/computer.)

Even when, at slower speeds, I'm writing block capitals for legibility (few can read what I've written in the lower-case printing), I use the lower-case "e" because the block "e" just takes too long.

Would have replied sooner, but got snowed out of the computer!!

>real good connection.

Wow, Aaron! You must grow some big watts in your neck of the woods.

Seriously, you are better off using a large capacity heat source, such as the 250+ watt gun, because the longer you keep that heat on the connector, the more likely it is that the center conductor will migrate. My technique is to get it hot, melt the solder, and get it cooled down, as quickly as practical. By the way, if you use cheap connectors, you will also notice that the insulator that holds the center pin will melt and the pin will sag. Use Amphenol. Hold the cable and connector still until the end of the cable is cooled so the center won't migrate. Scotchkote, tape, and more Scotchkote to seal for outside connections.

GL and 73,
Gary (other one again!)

SpaceNews
=========

MONDAY FEBRUARY 14, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* STS-60/SAREX NEWS *
====================
Gustavo, LW2DTZ, has provided a copy of the packet transmissions he received from the SAREX experiment carried on Shuttle missiom STS-60 on 06-Feb-94 at 06:56 UTC during a pass over Buenos Aires, Argentina:

W5RRR-1>QST <UI>:
Greetings from the crew of STS-60! Our current altitude is 190 nautOTRO miles above the beautiful Earth that is the home for all of us. We are very busy with Spacehab experiments and hopefully today we will deploy the Wake Shield Facility.

W5RRR-1>QST <UI>:
Best wishes and poka!
Privet to MIR crew
Un afectuoso saludo a todos los radioaficionados hispanoamericanos desde el transbordador espacial Discovery. Nuestra mision continua en su tercer dia. hoy logramos avances importantes en la met

W5RRR-1>QST <UI>:
alurgia y la cristalizacion de
proteinas para usos medicos.

W5RRR-1>SAREX <UI>:
This is STS-60 SAREX Robot station W5RRR-1
onboard the Space Shuttle Discovery.

Those who have heard or worked the STS-60 crew and wish to receive a QSL card need to send your signal report and an SASE or an envelope and IRCs to the following address:

STS-60 QSL
Education Activities Division
ARRL

225 Main St
Newington, CT 06111
U.S.A.

In other STS-60 news, Yoshiro Yamada at the Yokohama Science Center in Japan reported observing STS-60 at a +1 magnitude on 06-Feb-94 at 05:43 JST from Yokohama.

Although several opportunities were available to see the Shuttle during the early morning hours from the east coast of the United States, observations in some areas were not possible due to thick cloud cover (and heavy snow!).

* DOVE POSTS FIRST CALLS *
==========
The first of 300 callsigns of amateurs who sent telemetry data to Junior PY2BJO in Brazil when DOVE was brought back on the air in December have been posted on the satellite downlink in between engineering data. The following was received by KA3AFY on Friday Feb. 4th, 1994 at 1606 UTC:

DOVE-1>BRAMST [00/00/00 02:38:32]:
4th Feb 1994

DOVE reports have been received from :

AA7WD AB6BC AD4FH CT1DNF CT1EAT CT1EEB
CT1ENC CT1ENQ CT1ERC CT1ETZ CT1EXL CT1EXT

These will change in 4 Days.

[vk7zbx]

Tune into DOVE to see if your call or the call of someone you know shows up on the telemetry being sent on 145.825 MHz. Telemetry data is no longer needed but signal reports, equipment being used to receive DOVE, and DOVE being received in classrooms would be appreciated by BRAMSAT and Junior PY2BJO owner of DOVE. Please send reports to:

Dr. Junior Torres De Castro (PY2BJO)
119 Macaubal
Sao Palo
Brazil 01254

Thanks to Jim White (WD0E) and the DOVE Team for making the bulletin information available. Consult your favorite tracking program or DOVE Watcher for orbit information. Keep your eyes to the skies!

[Info via Larry Lilly, KA3AFY, "DOVE Watcher"]

* ITAMSAT BBS OPENS *
==========
After the software crash occurred on the 7 December, the ITAMSAT (IO-26) Command team decided to delay the reloading of the code, to improve the onboard software and further analyze the Whole Orbit Data dumps, to better understand the satellite motion and operation. On 06-Jan-94, the final

version of the code was validated by the Command team and the BBS re-opened to all users. The housekeeping code (IHT ver 2.1) now has WOD capabilities and weekly data dumps will be taken without affecting the BBS operations. All users are reminded that the BBS callsign is ITMSAT-11 for Broadcast and ITMSAT-12 for uploads, and that the standard PB and PG ground software is needed for accessing the BBS. The downlink frequency is 435.867 MHz using BPSK at 1200 baud.

Enjoy ITAMSAT!

[Info via Alberto, I2KBD, of the ITAMSAT Command Team]

* NEW PICTURE ON AO-21 *
==========
The AO-21 satellite is transmitting a picture showing the launch of the satellite three years ago. The picture is in WEFAX format at 240 lpm. The current operating schedule is available in 1200 bps AFSK packet radio format every 10 minutes on the 145.987 MHz RUDAK-II downlink frequency:

RUDAK2>BEACON <UI>:
RUDAK-II Schedule: (down 145.987, up 435.016)
min/10 Beacon Mode
0..4 FM Repeater
5..7 WEFAX Picture
8..9 AFSK TLM

RUDAK2>BEACON <UI>:
++ Hi, this is the RUDAK-II experiment on AMSAT OSCAR 21 ++

[Info via Gustavo, LW2DTZ]

* OSCAR-13 BANDPASS *
==========
Ever wonder who is active on AMSAT-OSCAR-13? Sergio, IK5AAX, in Italy provides the following bandpass listing for the curious:

OSCAR 13 BANDPASS:

SATURDAY 05:
2238-145924 ZY0SK
2245-145915 A22BW
2312-145897 LI2OWG
2333-145912 8P6SM

SUNDAY 06:
0036-145899 TI5RLI
1904-145884 K4AK
2330-145888 ZY0SK

MONDAY 07:
0018-145899 TU2OJ
0759-145905 Z21HJ

[Info via Sergio, IK5AAX]

* FO-20 OPERATION SCHEDULE *
============================
The FO-20 operation schedule is follows. Analog transponder and digital
transponder will be ON for a week respectively as they were since last
December.

Analog mode:
09-Feb-94 07:15 UTC -to- 16-Feb-94 07:40 UTC
23-Feb-94 08:05 UTC -to- 02-Mar-94 06:40 UTC
09-Mar-94 07:05 UTC -to- 16-Mar-94 07:30 UTC
23-Mar-94 07:52 UTC -to- 30-Mar-94 08:15 UTC

Digital mode:
Unless otherwise noted above.

[Info via Kazu Sakamoto, JJ1WTK]

It is called the Challange Cup Relay Race - also know as the Baker to Vegas
race. It's a 120 mile relay race in 20 legs from Baker, in California,
through Pahrumph (sp) and on into Vegas. This year it will be held
on April 8-9. We (Orange County RACES) set up a communications system
for the use of a few county teams. It is an international event, run
by police officers. This is all off the top of my head, so I may be off
a bit, but I gan get you as much info as you would like.

Yes, I found them informative as well.

Maybe the other poster is partly right about them having "nothing"
(Not MUCH... see the Vanity Call Signs?) to do with Amateur Radio...
But I don't believe that a separate newsgroup needs to be created.

REC.RADIO.INFO might be fine for this purpose in that it can cater
to the entire rec.radio.* subdivisions.

The Solar Terrestrial Dispatch
Ionospheric Support Branch

Proudly Releases

S K Y C O M V e r s i o n 1 . 0

High Frequency Ionospheric Signal Analyst

A New Standard in
Radio Communications Software

This significant software package is designed for high frequency (HF)
and very high frequency (VHF) radio communicators and/or listeners. This is
the ONLY major ionospheric software package we are aware of for personal
computers to thoroughly examine (in accurate detail) practically every
ionospheric parameter relavent to radio communications. It is a "MUST-HAVE"
for anyone involved in HF or refractive-VHF radio communications and will
almost certainly improve the productivity of all broadcasters.

Essentially, this software can be used as an ionospheric laboratory for
determining the effects of radio signals under a wide variety of solar and
geophysical conditions. It is very useful as a teaching tool, as well as an
analytical and predictive tool.

A complex dynamic model of the ionosphere is used to generate
exceptionally useful and accurate information regarding global ionospheric
conditions. Based on a corrected version of the most recent International
Reference Ionosphere (IRI) model - which produces realistic ionospheric
electron density profiles, SKYCOM dynamically alters the ionospheric profile
characteristics to more closely resemble profiles observed under actual
conditions.

This software has been a long time coming. We're pleased to announce a
few of the more significant features below:

* RAY TRACE SIGNALS THROUGH THE IONOSPHERE BET
ON THE EARTH.
* Learn the behavior of radio signals and see where and how signals are

refracted in the ionosphere.
* Visually study the effects of sporadic-E on radio signals. Observe how signals are refracted by sporadic-E.
* Simultaneously observe changes in the electron density as the signals are traced and refracted from one point to another.
* Examine the effects of signal convergence and divergence caused by ionospheric refraction.
* Study the behavior of signals as they penetrate into the various ionospheric layers (D, E, sporadic-E, F1, and F2 layers are all supported as well as TOP-SIDE ionospheric profiles up to 1000 km).
* Estimate effects of solar flares (minor or major) on the ionosphere and signals traversing the daylit sides of the ionosphere.
* Estimate the quality of any signal transmitted between any two points, under almost any set of circumstances. Quality figures are derived through the use of models that estimate the effects of: Geomagnetic Activity, SWFs, Sporadic-E, the Equatorial Anomaly, Regular Non-Deviative Absorption, the Winter Anomaly, Polar Cap Absorption, Deviative Auroral Absorption, etc.
* Determine circumstances which may result in very good, good, fair, poor, very poor, or even radio blackout conditions for any given path and for any given geophysical event.
* Determine accurate, rigorously ray-traced Maximum Usable Frequencies for practically any path.
* PRODUCE EXCEPTIONALLY DET
Determine exactly where your transmissions can be received on the Earth and the relative strength or quality of the received signals.
* PRODUCE IN-DEPTH COMPLEX GLOBAL MAPS OF IONOSPHERIC CHARACTERISTICS
These maps are similar to weather maps used by meteorologists and provide a wealth of information regarding the state of the ionosphere at any given date or time.
* Compute global maps of maximum usable frequencies for any time of day.
* Display global maps of ionospheric M-factors for 3000 km distances.
* Generate global maps of critical E or F2 layer frequencies.
* Display maps of solar zenith angles (elevation of the Sun).
* Generate global maps showing the maximum height of the F2 layer electron density.
* Produce unique transverse CROSS-SECTIONS of the ionosphere for any given path.
* Generate maps showing the geomagnetic DIP or inclination angles throughout the world.
* Display maps of the Total Field Intensity of the geomagnetic field.
* Also produce maps of Magnetic Latitude or Modified DIP angles.
* MIX AND MAT

SYSTEM REQUIREMENTS:

- IBM or compatible computer system (386 or better recommended).
- Math Coprocessor recommended, although not required.
- MSDOS 3.3 or higher.
- VGA graphics capabilities required. All graphics are VGA quality.
- 512 to 640 K of free memory.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Jesse,
I have a Kenwood TH78A, and I love it. I've also been out of the market for a year, but it was the best dual band radio I could find. I am also a college student, and I love having an HT. Try operating one with a speaker mic while riding a bike (with the HT in your backpack). That gets interesting.
The 78A might be a tad pricy (mine was upwards of 500 I think), but I also got some toys to go with it. I must admit a brand allegance to kenwood, but that's just me. I know you could not go wrong with a 78, so look into it if you get the chance. On a side note, it looks so cool that you probably won't get any dorks saying "hey, is that a CB?"
I'll keep the post short - mail me if you want more info

There have been one or two YL's besides her that have checked in as well.
IMHO, the number of YL's checking in is likely to be proportional to the
number of YL's that are hams rather than of those that are nudists.

> transmit audio level out of the TNC is way too low.

It may not be the audio from the TNC -- the 5100's data connection port has been changed recently. I own two 5100's -- one is a year old and one is a month old. The "old" 5100 works perfectly well with the TNC wired into the data port on the back of the radio. The "new" 5100 keys up the transmitter but doesn't provide any audio output when it transmits.

I called Yaesu about this and it seems that they've changed the data port on the back of the radio to allow direct 9600 baud connection. In doing this, they made it impossible to run 1200 and 2400 baud packet through the data port. Wiring directly to the mike connector does still work, so that's the "correct" way to do it now. The manuals haven't been updated to reflect the new hardware yet.

Bummer. Now I've got two "identical" radios and two distinctly different ways to plug in a TNC.

Jack, if for Ham use you only need an 8 bit A/D then why will your add-ons include a better A/D? I have a direct conversion receiver and have found that an 8-bit A/D is not good enough for weak signal CW reception. With 8-bits of dynamic range, I spent all my processing power in scaling and avoiding saturation from strong signals. 16-bits gives me some needed headroom.

Today I spoke with Roy, W8SAG who is a vision impaired ham (age 75)
who lives in Colorado Springs, Colorado.

Roy does not have a computer, so I told him that I would do my best
to find out everything that I could about *talking* computers and
programs that can assist the blind ham.

If you know anything about *talking* computers, the software and
hardware, please Email me. I will pass the info along to Roy.

Thanks,

Smitty, NA5K

: Thanks and 73s.
: don N6CLP

Lemmesee -- most (if not all) of the 440 machines in Orlando use
a 103.5 hz tone for intermod purposes. Some machines of choice are:

442.075 AB4CQ Very High, East Orlando, Covers Daytona
to Leesburg to Lakeland and well south
of Melbourne.

443.100 WD4IXD Sea World Tower, use for initial or short
contacts, ragchew elsewhere

443.325 N4LOZ Good coverage, nice owner (Mid/West Orlando
as I recall)

442.700 WA4ULT Going to/from work repeater. Good coverage.

444.025 AB4CQ Ibid. Longwood, 350' or so, fair coverage
but nothing like the 442.075 machine.

There's four or five other machines, but I don't know their status,
some's up, some's down. 443.600, 443.700, 443.675, 443.275 may
be up (but then again...) I usually scan the list above.

>story short, we called *every* couple of months, but we never received
>the promised radio. Finally, we just bought one (through a third
>party). This is the unit we reviewed. In March of 1993, we contacted

And one wonders why we don't advertise in QST, it's the attitude of
history re-writers such as J.B. I was there, and the facts just ain't so.
I'd rather talk on the phone! But I had to respond to such talk. You see, the
ARRL couldn't get their kit to work! So we sent them an assembled unit.
Yes it did not meet the FCC specs for spurious - missing by about a db or
two (I'm at home and don't have notes handy). The ARRL missed the whole
point of the kit which was to promote kit building, etc,etc. Now. I'm
sure you are thinking, "but it didn't meet FCC!" True, but for a fascinating
contrast, look at the GLOWING review of the MFJ regen receiver! Guess it
doesn't spray RF.I do believe that MFJ has been quite a big QST advertiser, too.
No, you'll not see a Ramsey ad in QST. It was years ago that I was approached
by a QST ad director to advertise. He expounded how QST was looking out for the
amateur, requiring test units before accepting ads. I responded that they had
plenty of ad pages from DSI, a since defunct freq ctr mfg who sold trash and
was openly taking $$ for products they had no intention of shipping! Of this is
the virtue you speak? Well, DSI closed shop, took QST readers for hundreds of
thousands of dollars and even stuck that nice old ad director too!
Yes, I'm hot and seeing this kangoroo (sp?) court makes me long for my work-
bench rather than this CRT. I don't have the luxury of getting paid to
read and respond to everything here - but I do welcome phone calls to myself
at the office (716) 924-4560. Just ask for me.

1531. CELLULAR SURVEILLANCE

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 03:02:50 UTC
From: bill.FIscher@t8000.cuc.ab.CA
Message-ID: <9402141902.A9592wk@t8000.cuc.ab.ca>
Source record: 271083

94-02-14

Finally, as the result of the efforts of a number of Internet gurus, we're able to tell you how to download a demo copy of the software that controls our Cellular Surveillance Interface, via e-mail. The program is entitled CELLDEMO.ZIP

Send an e-mail message to: ftpmail@decwrl.dec.com

Leave the subject line blank or use the word: file

In the body of the e-mail message, type the following six lines starting at line 1. Put YOUR e-mail address where is says your-email-address:

```
reply your-email-address
connect ftp.funet.fi
binary
uuencode
get pub/dx/software/msdos/rx-control/celldemo.zip
quit
```

Except for your e-mail address, type it EXACTLY the way it reads above. If you make any spelling or spacing mastakes, it won't work. Send it or mail it when you're sure it's correct.

Some time later you'll get a few pieces of e-mail. Two of these will each contain a portion of the demo program. The others are information only. Now you need to do some additional work. Edit the first of the two files you received to remove everything before the line that reads:

```
begin 444 ftpmail
```

This should now be line 1 of the file. Save the file.

The 444 refers to the number of lines in the two files, and ftpmail is the file name that you'll end up with when you combine them.

Edit the second file to remove everything before the line that begins with uppercase garbled text (similar to the text starting on line 2 of the first file). Save this file also.

Now you need a program called UUDECODE. If you don't have it, download and run the program UUE.EXE (or something similar) from a BBS in your area.

Now type: UUDECODE name-of-the-FIRST-file you received-and-edited

You'll now have a new file named FTPMAIL that is the sum of the two separate files your received and edited.

Rename this new file: celldemo.zip

Remember, celldemo.zip was the file you originally asked FTP to send you.

Now you need a program called PKUNZIP. If you don't have it, download and run the program PKZ204G.EXE from a BBS in your area.

Now type: PKUNZIP celldemo.zip

You'll now have four new files. Read the READ.ME file and then run the CSIDEMO program.

We realize that this was a lot of work. However, it didn't cost you anything except some time, and you now have a demo of the CSI unit. In addition, if this worked for you, you now know how to FTP any program, from anywhere, via e-mail. All you need to know is the FTP site, and the directory and name of the program you want. You may wish to save this FTP tutorial for future use.

Regards,

Bill Fischer Internet: bill.fischer@T8000.cuc.ab.ca

>per second. That requires a very good brickwall filter, however,
>so sampling is usually done at a somewhat higher rate, say 3X
>or 4X the highest audio frequency. Lets pick 3X. So our required
>bit rate is 16*15,000=240 kb/s.

but after your oversampling and filtering, you don't bother with
the "in-between" samples anymore ... you still end up transmitting
10kbps (in your example).

tho i would say that 8kilosamples/second @ 8bits is quite accepatable.
64kbps. using an ADPCM encoder you can chop this in half.

if you have a soundblaster, you can experiment with both sample rate
and resolution ... 4k samples/sec is too low, 6k is passable. fewer
than about 5 bits would probably make things very irritating.

>Or we can abandon voice grade radios for the links and use purpose
>built digital radios with higher baud rates. If we take a 56 kb
>WA4DSY RF modem (GRAPES), and couple that with an on the fly

or you could just get a pair of gunplexers. pricey, but you also
get the beginnings of a *very* high speed (>1Mbps) data link. voice/packet/
whatever.

price/performance/future: how much are gunplexers, how much are
the WA4DSY modem/radios and compare what both are eventually capable of.

as you might be able to tell, i like spending other people's money. :-)

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACT

14 FEBRUARY, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACT

NOTE: Intense stratospheric warming and a strong anticyclone exists over
the North Atlantic and Europe. Warm air is spreading east.

Please also note the inclusion of greater than 2 MeV electron fluence
values (useful for monitoring satellite charging activity).

NOTE: The Effective Sunspot Number for 13 FEB 94 was 39.6.
The Full Kp Indices for 13 FEB 94 are: 4+ 3+ 3o 5- 4- 5- 5- 4-
The 3-Hr Ap Indices for 13 FEB 94 are: 33 19 15 41 21 37 42 24
Greater than 2 MeV Electron Fluence for 14 FEB is: 3.6E+08

SYNOPSIS OF ACT

Solar activity was very low. Region 7671 (N10E65)
features a large, dark, spot extending over three degrees.

Solar activity forecast: solar activity is expected to be
very low.

STD: Region 7671 is associated with extremely intense Ca XV
emissions. The National Solar Observatory reported extremely
intense emissions as this region rotated around the east limb
on 12 February. Bad weather has prevented attempts to observe
emissions since then. C-class flares are possible from this
region. The threat for possible satellite anomalies may
continue for the next 2 or 3 days before electrons at greater
than 2 MeV fall back toward background levels.

The geomagnetic field has been at unsettled to minor storm
levels at mid-latitudes and major storm levels at high
latitudes. The storm which began 05 February continues at high
latitudes, but appears to have receded at mid-latitudes. The
energetic electron flux is elevated for the seventh day
in a row.

Geophysical activity forecast: the geomagnetic field is
expected to range from unsettled to minor storm for day one.
The field is expected to relax to mostly unsettled levels
for day two. A new coronal hole may disturb the magnetic field
on day three.

Event probabilities 15 feb-17 feb

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 15 feb-17 feb

A. Middle Latitudes
Active 35/25/30
Minor Storm 20/15/20
Major-Severe Storm 05/05/05

B. High Latitudes
Active 35/25/30
Minor Storm 25/15/20
Major-Severe Storm 05/05/05

HF propagation conditions continue to very slowly improve,
but are still well below normal, particularly on higher
latitude paths. Conditions are expected to remain below-normal
for at least the next 3 to 4 days. Another smaller coronal
hole related disturbance is expected to rejuvenate activity on
about 17 February, although it should primarily affect the
higher latitudes.

EVENTS WIT

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
13 Feb: 0051 0244 0429 C1.3 IV

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.

All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

From: Bob.Albert@f943.n102.z1.fidonet.org
Message-ID: <761366192.AA05048@mcws.fidonet.org>
Source record: 271087

Hey, it says here that you are a saxophone student. Tell me more! I play jazz...

Just to stay on topic, I discovered the problem with rf feedback in my hf setup; the TNC was picking it up and sending distorted audio to the rig. That didn't happen before the earthquake, so I'm trying to figure it out. 73 DE K6DDX

1536. Peter Jones Engineering address?

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 08:40:01 UTC

1537. Re: Medium range point-to-point digital links

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 08:47:20 UTC
From: bote@access3.digex.net
Message-ID: <bote.761301025@access3>
Source record: 271089

gary@ke4zv.atl.ga.us (Gary Coffman) writes:
>bote@access1.digex.net (John Boteler) writes:
>>I have gotten a bug up my rear to configure our point-to-point
>>repeater linking system with digital paths ranging 20
>>to 40 miles apart.
>Well lets look at some numbers and see. Lets assume
>you want "broadcast" grade audio. That's a SNR of
>50 db.

I would likely find 35-40 db S/N to be acceptable,
considering that it would be consistent and additive
as it is now with analog links.

[enlightening quantitative analysis trimmed]

>Or we can abandon voice grade radios for the links and use purpose
>built digital radios with higher baud rates. If we take a 56 kb
>WA4DSY RF modem (GRAPES),

I am fortunate to live in the Washington, D.C. area,
the home of the AMRAD group. I understand they are renewing
interest and activity in digital point to point links
with the potential for a made-to-order band proposal
that I hear is in the works. The WA4DSY modem might
be a practical way to proceed.

>If we can settle for less than perfection, however, Motorola has
>a codec scheme that they claim can fit a digital voice signal in
>the same bandwidth as a NBFM voice signal, IE 20 KHz. It won't

This sounds worth investigating. I also heard through
the grapevine that one of the contenders in the
digital cellular telephony war has a one-chip voice
CODEC which might be useful.

>the SNR is going to be around 27 db. It should be noted that hams
>consider the 20 db quieting level "full quieting" and thus perfectly
>acceptable audio quality.

I agree with Brian, 20dB is hardly full quieting. Further,
the qualitative "type" of noise in the digital domain
would be distinctly different than the amplifier
noise heard in an FM receiver on weak signals.
That may or may not be a problem, but would
take some getting used to for the typical
ham repeater user.

>22.4 kHz channel. But they won't deliver the "broadcast"
>grade audio you apparently want.

I like audio fidelity, but I could be trained to
accept band-limited audio frequency response in
return for consistent S/N. Knowing that the noise
on the system would be roughly the same regardless
of the number of intermediate hops would be
a worthwhile trade.

At one time, we had grandiose plans to connect this
across some 5 states! Initial tests proved workable,
as long as each system operator carefully crafted each site.

All these posts on the topic have straightened out
my head on this, so maybe I'll resume my efforts
at Plan A: installing analog companders at each
hub site to minimize the effects of additive noise.
I'm sure glad I have a tube of NE570s in the shop! :)

1539. MFJ speaker/mics for Yaesu FT530

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 11:40:05 UTC
From: wy1z@netcom.com
Message-ID: <wy1zCL9KEu.9qs@netcom.com>
Source record: 271091

I am considering getting an MFJ speaker/mic for my FT530 mainly due to the price.

How is the performance? I'm concentrating on the models which offer an earphone jack in the plug itself and some sort of alligator (sp?) clip for the belt. I'm also going for compactness. (Basically, a clip like Radio Shack mics in the size of the standard Yaesu MH-18A2B mics).

Keeping all of this in mind, how the does the net respond?

Thank much.

Scott

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu (currently at IP
number 128.205.32.9) or the Australian mirror at grivel.une.edu.au
(currently at IP number 129.180.4.7).

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
8085sys.zip - 8085 system software, from QEX 11/93 and 12/93
alinco_180t_mod - Alinco 180T modification for a TNC connection
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
antique_radio_info - misc info about antique radio collecting
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
bbs_interface_specs - specifications for message passing protocol
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
dx_w2iol.dat - data for all country prefix, position, etc
dx_w2iol.doc - documentation for the above database
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_index - quick reference index of elmers
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_shortwave - frequently asked questions about shortwave
```

qexfq194.zip - Pascal program for PC frequency counter, Jan 1994 QEX
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
qst_prodrev - index of ARRL product reviews in QST
quest_pool_novice - novice question pool - good after 7/1/93
quest_pool_technician - technician question pool - good after 7/1/93
quest_pool_general - general question pool - good before 6/30/94
quest_pool_advanced - advanced question pool - good before 6/30/95

quest_pool_extra - extra question pool - good before 6/30/96
rfi_tips - good posting about RFI
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms
sstv_wefax_info - general help for SSTV and WEFAX users
tasm.zip - table-driven assembler for weavrdsp.zip file
txt2eprm.zip - morse code ID generator programming utility (QEX 2/94)
usenet_purchases - tips on buying and selling via USENET
vlf_elf_references - references for info on VLF and ELF radio
weavrdsp.zip - src to "Weaver Method Modulator Using DSP" (QEX 9/93)

For readers of this newsgroup both new and experienced, these files are
a de-facto "Required Reading List" to provide definitive answers and
pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small
PostScript graphics that you feel would enhance this collection are most
welcome. Submit to Devon via his E-mail address above.

Thanks go to Devon Bowen, KA2NRC, for providing diskspace and maintaining
these valuable archives, as well as all the authors who wrote and submitted
the information contained in them.

Additional archives out there that have /pub/ham-radio directories are
encouraged to "mirror" these files to provide redundant storage for these
documents. Some of these sites (which may or may not mirror

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
===========================

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

1542. My HAMBLASTER note

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 12:54:38 UTC
From: n4hy@growler.ccr-p.ida.org
Message-ID: <N4HY.94Feb15125438@growler.ccr-p.ida.org>
Source record: 271125

The response to my note on the Soundblaster and Hamblaster cards has been overwhelming. The notes number in the hundred. I had no idea there was so much interest. I cannot possibly hope to answer all of these notes and I hope you will accept my apologies for not doing so.

I will keep the news groups posted as to what becomes available when.

Bob

While there isot all of the info there that I'd like to see,
as a free service, it has made my life a lot simpler.
It has the Lat and Long in the info with other basic
info that I can start with. This will reduce the time
that I have to spend with the Broadcasting-Cable Yearbook
by a bunch... and it has the *translators* listed as well
... which is a major boon. That alone is probably enough
to get a number of folks that I know that also do
broadcast engineering to 'go' for a system that has
a connection to the Internet.

In short, *THANK-You* (shouting intended)

: It was done as a promotion for a nudist colony in Georgia or somewhere.

: AL N1AL

I'm curious about nude QSL cards. Would anyone be offended if they
received a QSL card in the mail with nude people on it? Would it be
better to mail the card in an envelope? The envelope increases the
cost of mailing a QSL considerably, and cost a consideration when you
mail many cards.

A comment on the TH78A. I think it is a great radio with the following exceptions: 1: Cannot be used on external antenna on 2M due to horriffic intermod problems.
2: The battery release latch will occasionally trip when wearing on your belt, resulting in an unplanned battery drop test.

Welcome to Internet (Bitnet, Compuserve, ...) the public forum for the 21st century, with no filtering by the news media.
I find myself using e-mail and news more and more, and the phone less and less.
I've built a few of Mr. Ramsey's kits. I liked and still use the 2m amp, and our research project sent two of the FX-440's to Uzbekistan for an RF data link. I did not check the spectral purity of the outputs, but the Uzbekis don't really use the 440 MHz range, so we don't forsee any problems.
After the local dealer had removed one of the circuit boards from one of kits, Mr. Ramsey FedEx'ed me a new board, no charge.

1549. Noise Problem

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 15:17:26 UTC
From: William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM
Message-ID: <9401157613.AA761325446@smtpgty.anatcp.rockwell.com>
Source record: 271101

[dab@kaiwan.com] Doug Brandon [NF6H] writes:

For the past year or so, I've had a very bad noise problem while operating
on the HF bands. Since I've been a lot more active the past few months,
this is really starting to frustrate me. The noise is not a real choppy
sounding noise, but sounds more like VERY strong band noise. However
when I have this very loud noise, other stations within a few miles
have no noise. Neither of the two noise blankers turned up full blast
on my TS-930S do much good. I'm using a vertical antenna, so I can't
turn it to see which direction it's coming from. The noise is very
apparent on all HF bands from 1.8-28 MHz, 144mhz, as well as sparkles
on my cable TV. The noise doesnt seem to make it up to 450mhz though,
nice and quiet up there.

I have power lines directly in back of my house, but I don't think
they are the problem. I've had Southern California Edison come out a
few times over the past couple of years and they reported no problems.
The noise is not always there and varries in strength each time it
comes on. I think the noise is coming from some sort of appliance or
machinery from one of the neighbors' houses, but I have no idea how to
find it. It is a little baffling though, sometimes I won't hear the
noise for weeks, but is has been present this entire weekend 24 hours
a day.

Has anybody had experience tracking down and solving this type of
noise problem?

This sounds like a problem that drove me nuts for quite some time. Look for
a gas dryer or heater with an auto-igniter (as opposed to a pilot light). I
found my dryer will on occasion get stuck in a partially on condition at
the end of a cycle, causing the igniter to spark, but leaving the gas off,
the result is broad band noise and no TV (I'm too cheap for cable). :-)

I hope this helps. (By the way, since you are just up the road, I'm on the
Autonetics repeater during commute time, 145.915 (-) pl 136.5.)

I used to be a general aviation pilot. As a pilot,
I learned very quickly that there are three things
you can find near the end of any runway:
1) A high tension power line, obstructing the
approach course,
2) The local sewage treatment plant,
3) and the municipal golf course.

I wonder if there is a connection between golf courses,
power lines and sewage treatment plants! Maybe this explains
an increase in the cancer death rates of golf course
managers. Then too, maybe they all smoke cigarettes.

Then again, this is all so much conjecture, usually about
large percentile differences in very tiny numbers.

Well I don't want to get into a big fight about comparing power spectra
ratios to voltage ratios, I'll just say that it's the power spectrum that
you hear. If you want to use voltage ratios instead, that's fine, but it
means I'll have to raise the "broadcast quality" number to the 90-100 db
range instead of the 45-50 db range.

>: Now the Nyquist limit says we have to sample at a minimum
>: of twice the highest frequency in the audio. If we assume

>receiving end you interpolate to raise the sample rate back to
>something that can use reasonable reconstruction low-pass filters. So,

>a more realistic analysis gives a transmitted 10 kHz sampling rate at 8
>bits per sample, for 80 kbit/s.

I'll buy the digital filtering and decimation, and I'll even allow
that interpolation is acceptable at the Nyquist limit. I won't buy
into 8 bits, however. Whether you need a power spectrum ratio of
50 db, or a voltage ratio of 100 db, 8 bits still doesn't do it.
So we're back with a 160 kb/s data stream before compression.

You can, but it has to be a well engineered full duplex link. Of
course if you had voice grade links that good to begin with, you
wouldn't need to be worrying about digital audio to improve SNR. :-)

>: Or we can abandon voice grade radios for the links and use purpose

Yes, LZW is just an example of a compression scheme currently popular
for on-the-fly use in data modems. However, delta modulation can also
be "bursty" leading to time distortion of the audio, and a single
error can propagate for a significant time before the system recovers.
There are tricks that are helpful, however, if we know the nature of
speech, and we do. There are band gaps in the speech power spectrum,
and there are time characteristics to the key sounds that we can use
to tailor a compression scheme to minimize redundancy in the bit stream
without going to excessively lossy methods. We can also make use of
group and run length coding on partial samples of the spectrum before

merging them into the final bit stream, IE we know that a low frequency speech component is going to presist for several milliseconds so we don't have to transmit repetitive samples to reproduce it. (This requires a bit of tricky DSP, but it's doable.)

>: If we can settle for less than perfection, however, Motorola has
>: a codec scheme that they claim can fit a digital voice signal in
>: the same bandwidth as a NBFM voice signal, IE 20 KHz. It won't

>additional noise/distortion, beyond quantization noise.

Yes, the compression method is lossy. That, and the limitation of 8 bit sampling, is why I don't consider it capable of yielding a broadcast SNR.

>I've done some playing with MX-COM's CVSD codec. While I haven't
>analyzed the SNR, "by ear" it produces reasonable reproduction at 32
>kbit/s and audio I can stand to listen to (barely) at 16 kbit/s. At 64
>kbit/s, its audio is entirely acceptable for amateur purposes. IMHO.

The ear is rather easily fooled since most of us have poor sonic memory. Rapid A/B testing between the source audio and the reconstitued digital audio will quickly show the difference, however. An even better test is to feed a pair of headphones such that the original audio is in one channel, and the reconstituted signal is in the other. Shifts in the sound stage are an immediate clue as to defects in the reconstituted signal. We can use poor sonic memory to our advantage in communications links, but 8 bits isn't good enough to fool the ear under most conditions. 8 bits can fool the eye, 255 grey levels are sufficient for luminance video, but anything less than 12 bits is noticable to the ear, and 16 bits are required if that ear is trained and discerning.

As I mentioned, most amateurs consider a 20 db quieting, power ratio, sufficiently good for a communications channel. That's doable in 8 bits, but it won't meet the criteria of this discussion.

>at the office (716) 924-4560. Just ask for me.

Well, I spent an hour of my phone bill calling John Ramsey, long distance.
John says he doesn't have the luxury of getting paid to read and
respond to everything here. Aren't you self-employed, John? I don't
have the luxury of spending time on the phone at long distance rates
to try and talk to vendors. I buy the product, follow the directions
in the manual, and call it the way I see it. This is called being a
consumer. I quite nearly suggested at the time to John that he would
be well off spending $1k or so on good customer relations training,
if he'd listen.

By the way, be sure to read alt.radio.pirate; the FM-10 and AM-1 and the
broadband power amplifier (PA-1?) are very popular there. No one
on that newsgroup ever picks on Ramsey kits. :-)

>I am considering getting an MFJ speaker/mic...

I have one for my Yaesu. It works ok, but not great. The
sound quality is tinny and pitched toward the high end;
none of this is surprising considering the small size.
It's usable, and the small size is nice; an ok deal for
the money.

Mike, N4PDY

These are my opinions only

I do not know how you read this, but to me it looks like bad news for
buildability of Ramsey Kits. And now imagine an average John Q. Ham
with a 200 watt soldering gun and acid core solder. :)

--------------------------------READ----------------------------------
Disclaimer: The following remarks apply to a version of the 2m
transceiver kit purchased more than two years ago. Since we are talking
history here, I think I had tell you a short version of my story.

I do not know about ARRL, but let me tell ya. My club purchased a kit in
Oct or Nov 1991. I was elected to put it together and I did. But I had
lots of difficulty in getting it to work. For a variety of reasons some
of which are detailed below. I was not the only one having difficulty.
For a while there were a number of people, including me, exchanging regular
postings on internet. I helped a couple of local hams too.

And why did I have difficulty?

i) For starters, I had difficulty getting all the parts. The kit had a
packet of critical capacitors for the tuned sections missing. Called and got
a packet but not the one I had requested. I took a whole month before
I had the parts.

ii) Partly because the crystals were of wrong load pf. I spent oodles of
time debugging the circuit and after narrowing it down to the crystal, I
called a tech at Ramsey. He told me about padding the crystal. What upsets
me is that they
1 knew about the problem,

2 did not replace the crystal
3 and did not even meet the minimum requirement of documenting the bug/fix
so that I wouldn't spend all my time re-inventing the wheel

iii) Partly because the instructions are excruciatingly detailed in parts
that matter little, such as bending and clipping resistor leads and are
completely deficient in tune-up and alignment. I will not forget the
receiver alignment section: (after some step)
(Approximately, I quote from memory...)

>>> If you are satisfied then you are done.

Heh! What if I am *not* satisfied? Sorry, the instructions have ended.

I ended up using a signal generator and a high impedance impedance probe
to align the first stage of the receiver. But before I could do that,
I had to replace the first mixer as it was kaput. I should have come
with a protective ring but instead it was loose in a bag with a whole
bunch of parts.

iv) Tuning the transmitter to put out 4 to 6 watts and not run away with
spurs and parasitics took a long time and the setting was knife edge.

And so on. I posted a lot and helped people a couple of years ago
using Internet. I do not have a copy of all the postings, but I am sure
they are archived somewhere.

The version I built was purchased more than two years ago by my club. They
intended to use it for packet. And so my remarks apply to that version.
We have since procured a Alinco Data RAdio and use that.

>Yes it did not meet the FCC specs for spurious - missing by about a db or

When I returned John's call, he spent some time bad-mouthing the ARRL
and one other individual *by name*. I asked John not to use names, but
he insisted. I mean, a couple of high-profile customers have trouble

with his product, John's response is "they can't build kits". To actually mention people by name and say they can't build kits is poor customer relations. I contacted the other individual John bad-mouthed and asked for his side of the story; for what it is worth, this gentleman was at least as credible as John. It seems that, if you have nice things to say about Ramsey kits, John will say nice things about you. If you have any kind of trouble with Ramsey kits, you run the risk of being slandered.

1560. Re: Boring WWV Programs

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 17:39:57 UTC
From: martin@datacomm.ucc.okstate.edu
Message-ID: <1994Feb15.173957.3323@osuunx.ucc.okstate.edu>
Source record: 271112

One day in the late seventies, I was tuned to the 10MHZ output for WWV and heard a strong aditional carrier appear on the frequency, almost at zero beat. The carrier lasted a few seconds and then was replaced by a male voice which said, "Hey! What time is it out there, WWV?" This was next followed by half a dozen or so hand-typed RTTY characters which were of the 850HZ shift variety. The transmitter, then left the frequency.

The voice and the RTTY were heterodyned against WWV so that the voice was audible although I think it was originally SSB. I bet this was a rogue operator of a military or commercial avaiation system who was fooling around.

If my memory serves me right, there was a 400HZ power supply whine on the audio like one might hear from an aircraft transmitter and the voice had that crisp, close-talked sound that usually comes from a headset microphone.

1565. Hamblaster Update

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 18:40:50 UTC
From: jwa@tellabs.com
Message-ID: <1994Feb15.184050.5841@tellab5.tellabs.com>
Source record: 271117

2-15-94

I hope that this will clear up a few questions about
the Hamblaster.

Several weeks ago I mentioned that the projected cost for
the board would be about $350.00. Well, it was just a
"guesstimate"! It appears that it will be more in the $275.00
range and could be as low as $250.00. This may still sound
high compared to the Soundblaster or other sound cards, but
you have to remember that it's made exclusivly for Ham Radio.
Willco may only sell a few hundred a month. They can't compete
with companies that sell over a million units a year.

The Hamblaster is not a software package. It requires a
special sound card that uses a Texas Instruments TMS320C25
DSP to run filters or audio demodulators. It can interface
to a TNC via a TTL digital port and replace the TNC's poor
filtering.

It's not compatible with other sound cards and it can
co-exist with them. I use my Soundblaster Pro and Hamblaster
together. I can, for example, run a filter on the the Hamblaster,
connect it's output the Soundblaster and record a CW signal using
the SB software under the Windows environment.

More "info"

1) External Power supply

I think one feature that separates the Hamblaster
from other sound boards is it's ability to run on
an external 12 volt supply. When a filter or modem
is loaded, you can turn off the computer and it
will stay active.

When it's connected to a PK-232, there's no need
to leave the computer on in order to keep the DSP
alive. Right now, my PK232/Hamblaster is runing
and it's been operating for about two weeks.

There still some developement work being done and
I'm told that the power supply will be on a small
PC board and sold as an option for about $20.00.

2) Adaptive (LMS) filter

There's ongoing developement in this area. We are
planing (I don't think this has been done before)
to add controls to the LMS algorithm.

3) Soundblaster incompatibility

As I said before,
The Hamblaster IS NOT soundblaster compatible.
It was designed that way so that it will run
independant of other sound boards. I can still
use my Soundblater to record sound, play music,
load software from the CD or use the MIDI interface.

1567. Re: Nude QSL cards

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 19:33:48 UTC
From: lbrunson@rodgers.rain.COM
Message-ID: <9402152045.AA03433@rodgers.rain.com>
Source record: 271119

John Meaker (kr4ah) writes:
|
| I'm curious about nude QSL cards. Would anyone be offended if they
| received a QSL card in the mail with nude people on it? Would it be
| better to mail the card in an envelope? The envelope increases the
| cost of mailing a QSL considerably, and cost a consideration when you
| mail many cards.

There has been considerable discussion about the demography of the amateur radio community and how we can attract younger people to the hobby. Although nude QSL cards may attract teen-age boys to the hobby, I hope we don't have to resort to this method.

My son got his novice license when he was 11 and my daughter when she was 8. Regardless of what you may think about my moral values and religious convictions, I feel it is my responsibility to teach them to my children and help guide them through the difficulties of puberty which are before them. I would feel extremely offended if someone sent a nude QSL card to either of my kids. I do not wish either of my kids to be receiving nude photos in sealed envelopes, either.

My opinion is not up for debate here. Remember, the question is whether nude qsl cards may be offensive. I suspect that there may be some people who preach tolerance but will not tolerate my position on this issue. They may even be driven to challenge my beliefs. As this is not the issue, their comments are being redirected to /dev/null.

Best Wishes. Lowell (kc7dx)

1568. Re: Do NiMH Batteries Dev. Memories?

Newsgroup: rec.radio.amateur.misc

Bill Coleman (bcoleman@hayes.com) wrote:

: The best thing you can do about NiCd memory is to forget it.
^^^^^^ ^^^^^^^^^^
(I love it!)

On the subject of nicads, I have been reading all the magazine articles, Internet postings and old wives tales for many years trying to figure out the true story on nicad longevity. I eventually came to exactly the same conclusion as Bill:

: Two rules for long NiCd life: don't overheat them by overcharging; don't
: discharge them too deeply, or you may get cell reversal in the pack.

And under the "discharging too deeply" category, be careful of nicads that have sat (charged) on the shelf for a long time. Often one of the cells has discharged more than the others. To prevent cell reversal, always recharge such a battery pack before using.

Date: 1994-02-15 20:40:18 UTC
From: gt0265d@prism.gatech.EDU
Message-ID: <139056@hydra.gatech.EDU>
Source record: 271122

jrl2@cornell.edu (Jeffrey Luszcz) writes:
>Hello,
> I would like to start a FAQ for Collage Amateur Radio Clubs. If you know
>of a radio club on campus could you send me some info about it. IUm looking
>for

<< INFO DELETED >>

Well, I'd like to start with my own club, The Georgia Tech Amateur Radio Club (W4AQL). We are at Georgia Tech in Atlanta, and have undergrads, graduates, alumni, faculty and staff, and a few others as members. Our officials are:

Sponsor: Dr. Paul Steffes (paul.steffes@ee.gatech.edu)
President: Dave Kunkee K0DI (gt5830b@prism.gatech.edu)
VP: Jeff Tucker N9HZQ (tucker@eedsp.gatech.edu)
Treasurer: Dave Huggins N4RMM (david.huggins@gtri.gatech.edu)
Secretary: Carrie Carter N9JSR (carter@magnolia.gatech.edu)
Shack Steward: Mike Whaley KD4UGI (whaley@hibiscus.gatech.edu) (that's me!)
Shack phone: (404) 894-2971
Shack Address: Room E-180, Electrical Engineering Bldg, Georgia Tech

We have a repeater on 145.15 (input 144.55) located on the GT campus, with a remote site on 145.05 in Duluth, GA. Our shack is very well equipped, with 2 Kenwood TS-940S's, an icom and a Yaesu VHF rig (ferget the numbers) two Alpha 77 amps on the Kenwoods, and the following antennas: TH-6, 10,15,and 20 meter beams, 2m and 70cm satellite antennas, and 80 and 160 meter dipoles. We probably have more up there, but between the 3 towers I can't remember all of it :-)

GTARC was started by 1927 for sure, and we believe that it may have existed as early as 1911- we're still trying to corroborate that info. We have approximately 50 members or so, who operate on all bands and all modes, especially while contesting! The club has an email server at listserv@gitvm1.gatech.edu, or you can send mail to the club account at eew4aql@prism.gatech.edu. We would be very happy to hear from any interested folks out there, especially those who are or have been associated with Tech or the club.

>Even if you canUt answer all the questions, oh well, its a start. I will
>put the
>info on a ftp site and/or post if people are interested.
>Thanks,

>-Jeff Luszcz N2TIQ
>jrl2@cornell.edu
>Cornell Amateur Radio Club W2CXM

Well, there's the Rambling Wreck contribution. Good luck to you on this project--- and if anyone else out there wants to organize some sort of get-together between Tech and some other school (UGA excepted ;-) let us know!

1572. John Ramsey

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-15 20:41:47 UTC
From: JMG@tntech.edu
Message-ID: <01H8X21VF1N6ECXSL5@tntech.edu>
Source record: 271123

Well I will say it flat out: John Ramsey is a liar. I caught him at it first hand and won't go near any of their products anymore.

I purchased one of the original 2 meter transceiver kits. I really like the way the instruction book was organized and you get to test one section before proceeding with the next. I did a real careful job with mine.

It didn't work correctly when I finished. I got a graduate student from the EE program here at the University who is a ham to help me. He found that the crystals weren't cut correctly (while building I noticed some of the components were fine.. many were trash.. the wire kept falling apart).

I called tech support .. spent a bunch of long distance time with a nice gentleman who seemed to know what he was talking about. He informed me that they had received a batch of bad crystals (think he said 400 or so) and they were forced to use them up (couldn't understand this). He told me some procedures to "pad" the crystals to bring them on frequency. My friend helped me get the rig going.. not perfectly..but I have been using it for packet for about 2 years now.. only had to mess with it 3 or for times.

Well I got so mad at this concept that I wrote Mr. Ramsey a nice letter. It was strong enough so that he paid for the phone call to call me. He wanted to know who the tech. was.. (sounded like he was going to fire him).. and INSISTED the tech lied and there was absolutely nothing wrong with the crystals.. he stated the extra instructions tell you how to pad the crystals... and in very technical terms proceeded to tell me this was normal.. I was a new ham with no background in electronics at the time.. he sure sounded full of it. I decided not to press the matter and told him I thought he should have just replaced the crystals.

At the time there were long discussions about MANY people exeperiencing the same difficulties I had... some people got their's to work right away (probably lucked out and got good crystals). There was also all types of problems in the alignment with having to stretch some of the coils way out of shape to get power out of the TX.

I recently heard that John Ramsey said some pretty bad things about me to a customer over the phone.. don't know where that came from.. think this guy is VERY disreputable.

Anyway, Ten Tec is suppose to come out with a nice 2 meter fm transceiver kit in the near future.

I have an ICOM 24AT which I would like to use with tone burst. Is there a way to do this easily?

I understand that someone sells a tone-burst whistle which immitates the tone to prevent internal modification of a radio.

Anyone heard or know where I can get one of these?

: Best Wishes. Lowell (kc7dx)

No, I don't think your out of place. Would one send a nude QSL to a foreign
country? I certainly hope not. In some counties they would be banned and
could get the recieving ham in trouble. Besides, what sort of image are
you presenting for the U.S.? If you would not send one to a foriegn country,
why send one to a U.S. ham. Some would definitely be offended, othere would
think you a jerk at best. Go get a W4MPY or WA6AHF QSL, or one with you
full dressed in your shack with your dog/cat/bird/snake.

```
FIRST CALL FOR VOTES (of 2)
unmoderated group sci.geo.satellite-nav

Newsgroups line:
sci.geo.satellite-nav Satellite navigation systems, especially GPS.

Votes must be received by 23:59:59 UTC, 8 March 1994.

After this CFV appears on news.announce.newgroups, it will be posted
to the GPS Digest <gps-request@tws4.si.com>.

This vote is being conducted by a neutral third party. For voting
questions only contact rdippold@qualcomm.com. For questions about the
proposed group contact Andy Arkusinski <arkusinski_andy@si.com>.

CHARTER

This will be an unmoderated newsgroup.

SCI.GEO.SATELLITE-NAV was chosen because the focus of this group is on
navigation. The SCI.SPACE hierarchy deals with various aspects of
space exploration and use, but this newsgroup deals mostly with
terrestrial applications. The fact that the space segment is in space
is almost incidental to the focus of the newsgroup.

SCI.GEO.SATELLITE-NAV will allow a centralized location for discussion
of global navigation satellite systems (GNSS). The charter
specifically includes the US Global Positioning System (GPS) and
Russian GLONASS, but is also open to discussion of other existing and
future satellite positioning systems.

Some topics that fall under this newsgroup charter are:
* Technical aspects of GNSS operation.
* User experiences in the use of GNSS.
* Information regarding GNSS products.
* Discussion of GNSS policy (such as GPS
selective availability).
* Extensions to basic GNSS technology, such as
differential GPS and pseudolites.
* Navigational uses of satellite systems whose primary
purpose is not navigation, such as a communication
satellite net.

Examples of topics that would not fall under the group charter are:
* Other satellite systems such as communications and
```

intelligence gathering, except for navigational uses of
such systems.
* Discussion of space policy in general.
* Discussion of areas that may use GNSS, such as
surveying, sailing, or aeronautics, except as they
directly relate to use of GNSS.

GPS, in particular, has turned out to be a technology with a great deal of synergism with many fields. GPS is used, not only for military positioning which was the original purpose, but in applications as diverse as entomology and film making. A major intent of this newsgroup is to share the uses to which GNSS technology is being put, thus inspiring even more innovative uses.

While part of the SCI.GEO hierarchy, this newsgroup does not exclude non-terrestrial uses of satellite navigation. Use of GPS to determine space vehicle position is within the charter.

This group is also intended to function as a resource for newcomers, who can post their questions and receive help from others who have passed that way before.

Rationale: There is no single newsgroup where information on GPS and other satellite navigation systems can be found. Questions are often posted in newsgroups such as sci.electronics, rec.aviation, and sci.aeronautics. To address this lack, the mailing list GPS Digest was started about a year ago, and now has over 400 subscribers.

Recently we attempted to convert GPS Digest from a moderated weekly newsletter to an unmoderated reflector. Submissions, which had been running at 2-3 per week, immediately picked up to 15 the first day. Our resources were overloaded, and the Digest is back to the original format. Many readers indicated the real-time response was helpful and suggested the formation of a newsgroup.

The RFD and CFV will be posted to the GPS Digest mailing list as well as Usenet newsgroups. Only those readers with access to Usenet should cast votes (for or against) formation of the newsgroup.

HOW TO VOTE

Send MAIL to: voting@qualcomm.com
Just Replying should work if you are not reading this on a mailing list.

Your mail message should contain one of the following statements:
I vote YES on sci.geo.satellite-nav
I vote NO on sci.geo.satellite-nav

You may also ABSTAIN in place of YES/NO - this will not affect the outcome. Anything else may be rejected by the automatic vote counting program. The votetaker will respond to your received ballots with a personal acknowledgement by mail - if you do not receive one within several days, try again. It's your responsibility to make sure your vote is registered correctly.

Only one vote per person and per account will be counted. Addresses and votes of all voters will be published in the final voting results list.

Date: Sun, 13 Feb 94 09:48:33 PST
From: jestevez@pro-janin.cts.COM (Joseph Estevez)
Subject: Re: FT980/FTV250.

I had sent out a request for infomation regarding using a transverter
with my FT980 transceiver and got a very interesting response back from
Joseph. Thanks very much Jo. Thought I would share it with the net.

>A better choice for a Transverter for the FT-980 is the Yaesu FTV-901R, if
>you can find one. This transverter is more of what Yaesu was planning to
>design for the FT-980 Transceiver.

I was wondering if this transverter was designed specifically to go with
a particular Yaesu transceiver like th FT980 or FT-one, etc? Was it in
production very long...make my job of finding one easier?

>All it takes is a few parts modification to make it works with the FT-980
>Transceiver, and you'll cover from 1.8-450-Mhz with just one radio.
>Satellite is a dandy with this set-up. This is the set-up that I'm using
>to work OSCARs Satellites, local repeaters, SSB VHF, etc.

Does the FTV-901R take different module to cover 2 meters, 70 Cmtrs, etc.
or does it just cover 50-54, 144-148, 220-222, 432-450 Mhz ham bands
just like it comes?

>The parts needed can be ordered from Yeasu, with a schematic. The
>operating instructions are in Japanese, but it can be traslated very
>easily.

>It's been many years since I did the modification on my radio. When I
>started, Yaesu didn't even had any information on it. I was offered a job
>at Yaesu for this (worked for 2-years for them). I was the first one on
>the FT-980 Transverter, because the company never continue the completion
>of the Transverter project.

>You cannot control the FTV-250 from the FT-980. But with the FTV-901R, the
>FT-980 Transceiver controls the FTV-901R Transverter. All of this for only
>about 1 or 2 Transistors, 5 Resistors, re-wiring the connectors on the
>FTV-901R, and making the cable from the FT-980 to the FTV-901R. Total cost
>about $5.00 dollars; with inflation and mail order from Yaesu... maybe
>about $7-to-$10 dollars.

>The end results is a Transverter that it match the FT-980 Transceiver, as
>intended by Yaesu, controlled by the FT-980 (yes the radio control the
>transverter), and a better set-up than the FTV-250.

A reminder for the Gosford - Central Coast Field Day

Don't forget the Central Coast Field Day on 27th February, at
the prestige venue of the Wyong Racecourse in Howarth St.
Wyong.

There you will meet the committee of ANARTS -- Col VK2CTD,
President, Jim VK2BQS, Vice-President, Alan VK2DPM, Treasurer,
and Pat VK2JPA, Broadcast Officer, will be floating around
somewhere with a video camera. (I am also a member of the
Gladesville Amateur Radio Club specialising in ATV. Pat)

Don't forget to enter the Morse contest ANARTS will be running
again. It was such a success last year that it will be a
feature of the stand again this year. Polish your sending and
receiving skills and come along and participate in this most
historic method of amateur digital transmission.

See you there.

RTTY Digital Journal in new hands

The RTTY Digital Journal has been sold to the American Digital
Radio Society (ADRS). This society has made a statement of its
aims, as below -

The principal goal of the American Digital Radio Society
is to advance digital technology as it applies to Amateur

Radio and to promote the wisest use of the digital portion of the amateur radio spectrum. The ADRS best serves the global fraternity by enhancing the opportunities for all who chose to explore the digital modes.

The editor is unchanged, being Dale Sinner W6IWO, but both the publisher, Jim Mortenson N2HOS, and Director of Marketing, Jay Townsend, WS7I are new to the publication.

All the regular features are continuing, so really only the ownership has changed. It is seen as the voice of the digital radio fraternity, may it flourish and be heard.

Some news from VK6

It was sad to note, the resignation of RON,VK6RF from the group. Ron has been a long time member of W.A.A.D.C.A , a supporter of R.T.T.Y. and the sunday morning broadcasts. It is hoped you continue to listen , and report in on occasions please RON.

A new PACKET RADIO user port is to be installed at WIRELESS HILL PARK. The operating frequency will be 144.825. This will supplement the users on this channel , as well as provide better traffic loading between channels.

R.T.T.Y. MAIL BOX

The Technical Officer JOE VK6ZTN still has to find the time from his busy schedule to modify the fm 880 transceiver for the R.T.T.Y. mailbox to become operational.

Finally a big THANK YOU TO PHIL VK6ADF .
Phil has had to resign from the committee of W.A.D.C.A. due to other committments , Phil has been a tireless worker
for the group . your absence will be surely be missed Phil.

Summary of activity

Solar activity was very low 4th-9th February, and low on 10th. No flares were reported during this period.

The geomagnetic field at Learmonth (WA) on 4th was mostly quiet with unsettled to active conditions during local night, on 5th was quiet to unsettled, on 6th-7th mostly at storm levels. The field was at active to minor storm levels mostly during local night on 8th-10th February.

Ionospheric F2 critical frequencies at Sydney on 4th-5th were
near predicted monthly values to up to 30 per cent enhanced,
then becoming near predicted monthly values to up to 30 per
cent depressed during the remainder of the period.

Comment:
Strong magnetic storm activity was observed during Feb 6-8.
This activity arrived a day earlier than expected and was
stronger than expected. Storm was due to a coronal hole.

Forecast for the next week (11 - 17 February)

Solar : Low to moderate.

Geomagnetic: Active due to a coronal hole.

Ionospheric: Degraded HF communications expected all week.
MUFs are expected to be 10-15 per cent depressed
on IPS predicted monthly values.

1583. Schematic for Heathkit HW-2036A Needed

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 00:39:31 UTC
From: William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM
Message-ID: <9401157613.AA761359171@smtpgty.anatcp.rockwell.com>
Source record: 271034

I seem to have caused serious injury to a Heathkit HW-2036A. I have all the documentation EXCEPT the schematic, which is, of course, what I need the most to fix the beast. :-) Does anyone out there have a schematic for this radio they would kindly copy for me? I will, of course, pay reasonable copy/mailing costs.

I've made some mods that will make this a great packet radio if I can get it back on line. :-)

1584. FT-530 Firmware Problems (epilogue)

Newsgroup: rec.radio.amateur.misc
Date: 1994-02-16 01:38:07 UTC
From: RGS@gfimda.UUCP
Message-ID: <940215203807.222c@gms.mh.wp.kgf.com>
Source record: 271035

This is a post of an item I deposited on Compu$erve's HAMNET forum:

Well I just received my re-repaired FT-530 back today. As I had promised earlier, here is the finally summary of what was done and the cost if it is out of warranty. Please note that my radio is Lot #16. All FT-530's that I have played with suffer from the DTMF code squelch problem:

1) Page Acknowledgment will not turn on:

Item G2070088 (Diode 1SS302 TE85R) was installed. Price 23 cents.
Labor $50. Shipping $6.58.

Note: I believe the Page Acknowledgment may be a problem only if the radio has had the receive range extended by removing the jumper on pad 13. After talking to several other hams, it would seem to be that only those radios that were modified suffer from this (not conclusive). The fact that a diode needs to be added would seem to confirm this.

2) DTMF code squelch only decodes first 2 digits:

"REPLACED DEFECTIVE CPU IC, ADJUSTED AND TESTED UNIT'S OPERATIONS TO FACTORY SPECIFICATIONS." That's what the work order says!
Labor $150. Shipping $5.99.

I have tested the radio so far and it seems to work fine. In fact, 2-meter sensitivity seems better than it was before!
